BACKGROUND INFORMATION

 Project rationale. Humanitarian context: Give a specific description of the humanitarian situation in the target region based on newest data available (indicate source) (Maximum of 1500 characters) Nuristan is one of the most isolated provinces of Afghanistan, and has difficult geographical terrain. The province borders Pakistan to the east, which makes it vulnerable to the infiltrations of government opposition groups from across the border. The geographical terrain of the Nuristan province has made it mostly inaccessible to basic health services including nutrition services for the male and female children and women. Paktika is a remote province located in the south eastern region and has a long and uncontrolled border with the most insecure part (North Waziristan) of Pakistan, which results in frequent infiltration of anti-government elements and recurrent clashes between these elements and Afghan military forces. Currently, a military operation has been ongoing by Pakistani military in North Waziristan and this situation has led to a huge movement of families to border to Pakitika and Khost provinces of Afghanistan. According to the UNCHR report issued on Aug 27, 6,375 refugee families have settled in Paktika province particularly in Barmal, Sarobi, Urgon, Naka and Zirok districts. International Medical Corps (IMC) has had a long presence in the province and is currently providing Basic Package of Health Services (BPHS) and the Essential Package of Health Services (EPHS) under PCH contract of Ministry of Public Health (MoPH). The PCH projects could not fulfill the needs of community for provision of nutrition services based on BPHS 2010. PHC projects include 7 OPD SAM/OPD MAM and 2 SCs, supported through vertical funding by UNICEF and WFP. The ongoing CHF project brings the opportunity to extend OPD SAM/OPD MAM to 4 more sites in very remote and insecure districts of Pakika province. As the BPHS/EPHS implementer in Paktika and Nuristan, IMC technical staff has access to all health facilities (HFs) and conducts regular supportive supervision and monitoring. IMC has also maintained good coordination with community, the Paktika Provincial Public Health Director (PPHD) and other stakeholders in the provin

2. Needs assessment. Describe the capacities in place, then identify the gaps (previous and new). Explain the specific needs of your target group(s) in detail. State how the needs assessment was conducted (who consulted whom, how and when?). List any baseline data

In Afghanistan the malnutrition rates for both acute and chronic malnutrition are among the highest in the world. The finding of National Nutrition Survey 2013 revealed that the malnutrition rates among children 0–59 months of age at national level were as follows; stunting (HAZ <-2SD) 40.9% (95% CI 39.3- 42.5), wasting (WHZ <-2SD) 9.5% (95% CI 8.73-10.4), Provincial variations in the prevalence of wasting ranged from 3.7% in the province of Faryab to 21.6% in Uruzgan. In nine provinces more than 15% of children aged 0-59 months were wasted as per WHO Classifications. Nuristan province is the third among these nine with GAM prevalence of 19.4%, Paktika is reported to have a SAM prevalence rate of 4%, which, according to WHO classification, is high. The GAM in Paktika is 8.7%. The nutritional status of adolescent girls (10-19 years) was assessed for the first time in Afghanistan in the NNS 2013. Findings of the survey reported that, among women of reproductive age (15-49 years); at national level 9.2% (95% CI 8.1-10.3) of women were thin or undernourished (BMI <18.5 kg/m). In Nuristan, The 2013 cluster analysis identified eastern Nuristan as having high vulnerability with regard to the WASH. Nuristan is a high ranking province needing WASH activities as it is prone to displacement, disease outbreaks, flash flood, drought, and other natural disasters. Moreover, according to the NNS from 2013, only 28.5% of women reported washing their hands with soap after defecation in Nuristan and only 35.6% of women reported washing their hands with soap after defecation in Paktika. IMC is the current BPHS/EPHS implementer in the Nuristan and Paktika Provinces. The current projects are providing nutrition services which include screening and treatment of children < 5 years and PLWs for acute malnutrition. WFP OPD MAM project covers children <5 years and PLWs for MAM in five out of 25 health facilities. CHF first round funding extended sites from five to eight HFs and as well as the OTPs sites from 14 to 16. The first CHF also

3. Activities. List and describe the activities that your organization is currently implementing to address these needs

IMC runs all of the HFs in Nuristan and Paktika. The ongoing CHF first round project is responding to the needs identified by IMC during the period between 2007 and 2013, but there is still need to extend the nutrition activities further to other districts of both Nuristan and Paktika provinces as seen by the results of NNS 2013. IMC will increase access to and utilization of quality nutrition services and increase the capacities of the HFs, CHWs and communities for the prevention and management of acute malnutrition and increase access of communities to safe drinking water, latrine and hand washing facilities inside of health facilities. The project will be implemented through existing SCs, OPD SAM /OPD MAM sites at 25 HFs and 116 HPs of target districts of Nuristan and 8 HFs and 97 HP of target districts of Paktika. IMC will construct 28 latrines, 15 bio sand filter and 8 hand washing facilities in Paktika and 19 latrines, 9 filter and 8 hand washing facilities in

Nuristan province. Community health workers will also increase IMAM program coverage through active case finding at the community level. IMC will raise the awareness of the community on hand washing and hygiene promotion, promoting immunization, promoting healthy food consumption, explaining the importance of growth monitoring, promoting exclusive breast feeding and early hititation of breast feeding, educating, educating on correct complementary feeding practices, and promoting the importance of micronutrient supplementation to PLW and children. IMC will also promote growth monitoring at HFs and at the community level by providing training to the HF staff and as well as to CHWs. Proper GMP tools developed by MoPH will be supplied to HF and CHWs. IMC will increase two SC for treatment of severe acute malnutrition with complications in both provinces, 12 additional OPD MAM sites and 6 additional OPD SAM sites will be established to increase access to and utilization of nutrition services in both provinces. CHWs will also be trained on hygiene promotion and IYCF. CHSs and nutrition staff will be trained on MMNP distribution in targeted districts and MMNP supply will be provided by UNICEF. HFs shura members will also receive one day training on prevention of malnutrition. Target HFs will admit SAM children with complication in OPD SAM and MAM children in the OPD MAM under the IMAM program, which is part of the basic health services provided by the HFs. UNICEF and WFP will provide food supplements (RUTF, F-75 and F-100, ReSoMal, for the management of SAM at SCs and OPD SAM and provide RUSF, wheat, vegetable oil, pulses, iodized salt and MNT tablets for the treatment of MAM for SFP sites through two separate agreements with UNICEF and WFP. This project will increase access of community and HFs staff to safe drinking water, latrines and hand washing facilities with soap inside the health centers through construction of bio sand filter systems. Safe latrines and hand washing facilities will be available inside of the

LOGICAL FRAMEWORK

Overall project objective To provide quality prevention and treatment of acute malnutrition for children under 5 and PLWs in Nuristan and Paktika in 12 months

Logical Framework details for NUTRITION

Cluster objectives	Strategic Response Plan (SRP) objectives	Percentage of activities
Objective 1. Prevalence of acute malnutrition in U5 and PLW is reduced in most at risk communities.	Providing emergency health care and prioritizing access to critical services	100

Outcome 1	Improved access of the children <5 years and pregnant and lactating women to the treatment of acc Provinces.	te malnutrition and integrated WASH interventions in Nuristan and Paktika
Code	Description	Assumptions & Risks
Output 1.1	establish 20 new treatment sites in Nuristan and Paktika for screening , growth monitoring and provide facility based treatment for children U/5 and PLW .	security , unavailability of supplies

Indicators

Code	Cluster	Indicator		End Cycle Beneficiaries						
			Men	Women	Boys	Girls	Cycle Target			
Indicator 1.1.1	NUTRITION	# of children 6-59 months screened					15383			
	Means of Verification:	Health facility report , M&E report								
Indicator 1.1.2	NUTRITION	# of CHWs male and female trained on nutrition education					239			
	Means of Verification:	training report , training attendance sheet , M&E report								
Indicator 1.1.3	NUTRITION	# of CHWs trained on early detection, referral and treatment of children under five and PLWs					103			
	Means of Verification:	training report , attendance sheet , M&E report								
Indicator 1.1.4	NUTRITION	No of SAM boys and girls admitted					2387			
	Means of Verification:	statistic report								
Indicator 1.1.5	NUTRITION	No MAM boys and girls admitted					2311			
	Means of Verification:	Clinic report								
Indicator 1.1.6	NUTRITION	No PLW admitted					1044			
	Means of Verification:	clinic records								
Indicator 1.1.7	NUTRITION	Proportion cured in line with SPHERE standards					75			
	Means of Verification:	Statistic report								
Indicator 1.1.8	NUTRITION	Death rate in line with SPHERE standards					10			
	Means of Verification:	statistic report								
Indicator 1.1.9	NUTRITION	No of health staff was assessed for Training Need					52			
	Means of Verification:	TNA checklists, M&E report								

Activities

Activity 1.1.1	Screening of children under five in newly established HFs to identify children with SAM and MAM and admitted to the program
Activity 1.1.2	To operate the old and newly established treatment facilities (OPD SAM/OPD MAM/IPD SAM) functional for the screen/growth monitoring and provision of facility based treatment to the children 6-59 months and pregnant and lactating women on acute malnutrition at the target health facilities.
Activity 1.1.3	Conduct basic and refresher training on nutrition/growth monitoring for male and female health facility workers and for CHWs on nutrition education and early detection, referral and treatment of children under five years and pregnant and lactating women (PLW).
Activity 1.1.4	Assess the capacity of male and female health staff at the health facilities through TNA

c	Outcome 2	tcome 2 Increased prevention of malnutrition through training of communities on IYCF/ hygiene and other nutrition aspects

M & E DETAILS

Implementation: Describe for each activity how you plan to implement it and who is carrying out what.

During the first two months of the project, IMC will recruit, orient and deploy the key project staff and coordinate with the PPHD of both provinces on implementation and M&E plans. IMC will assess the capacity of male and female health staff at health facility and project levels through training need assessment (TNA) and trainings will be organized on (IMAM), Growth monitoring and promotion, Active case finding. IMC will also provide training on hygiene promotion to the CHWs and community health shura members. IMC has already completed an assessment to ensure existence of safe drinking water /latrines and hand washing facilities in all health centers IMC will implement wash activities in all districts of both provinces, while the OPD SAM/OPD MAM/SCs will be implemented in Paroon, Mandol, Nurgern, Kamdesh, districts) of Nuristan Provinces and OPD SAM/OPD MAM/SCs in (Gomal, Khair Khot, Khoshman, Urgon, Yahyakhil and Ziruk districts) of Paktika province. Construction and rehabilitation of safe latrine inside of the HFs will be doing by the WASH officer in both Nuristan and Paktika provinces. IMC will him requalified WASH officers, to build latrines, hand washing facilities and bio sand flies ystem in targeted HFs.) Medicines, medical/non medical equipment will be provided, nutrition supplies and equipment for anthropometric measurements, used for nutrition services will be purchased and provide to the health facilities for screening, follow up and treatment of the malnutrition cases. IMC has maintained a positive working relationship with other stakeholders, including PPHD, WHO, UNICEF and WFP. IMC attends the monthly Provincial Health Coordination Committee Meeting (PHCO). IMC also attends the Provincial Development Committee (PDC) which are convened on a monthly basis and chaired by the governor or deputy governor. IMC will have coordination meeting with WFP at Kabul level for provision of supplies for PLWs in the targeted HFs of CHF projects. IMC will have a FLA (Field Level Agreement) for both Nuristan and Pa

Monitoring: Describe how you will monitor the implementation of each activity. Describe the tools you plan to use (checklist, photo, questionnaires, interviews, suggestion box etc.) in order to collect data and how you will store data. Explain the frequency type and protocol of reporting (how often do you report about what to whom?). State if, when and how you plan to evaluate your project.

Within the first month of the project, International Medical Corps will work with stakeholders to develop a comprehensive monitoring plan to monitor the project activities and collect data. Monitoring plans will include a workplan for M&E activities, a thorough review of the expected outcomes and indicators, a clear explanation of how indicators will be measured, and how the project will ensure quality programmatic data collection. For monthly statistical reports data will be collected for the following: a) number of new cases enrolled in OPD SAM, OPD MAM and admitted as in-patient in SC/TFU; b) new and total admissions (by gender and age group) clearly distinguishing between new admissions and referrals from other elements of the program (TFU, OPD SAM, OPD MAM) or returning defaulters; c) exits (i.e., cured, deaths, defaulters, referred out, non-cured) and the total number of children in the program at the end of each month; and, d) admissions by category (MUAC, weight for height, edema). IMC will provide quarterly, semiannual and final reports to CHF through the online GMS system to OCHA. International Medical Corps has a robust monitoring tool that includes a logic model in order to ensure monitoring progress based on the established indicators and objectives and all the related sources of verification such as training reports, health facilities records, meeting minutes, etc. Comprehensive quality assessment checklists (OPD SAM monitoring, inpatient monitoring, OPD MAM, IYCF program and micronutrient program checklists) will be used to evaluate the quality of services and staff capabilities during monitoring visits and provide feedback to the field staff. The project staff includes an M&E Officer who will oversee all of the monitoring activities for the project, including routine monitoring. The M&E Officer will also lead the effort to develop the project management plan and detailed M&E plan. Joint monitoring visits with PPHD or PNO will be organized. IMC will provide quarterly, semiannual and final reports

	Activity 3.1.3: Construction	on of 47 latrines inside of health facilities and availability of soap
Cross Cutting Issues	awareness of nutrition services of distances to seek nutrition service ability to travel on their own. The p training of female community healt	with traditional beliefs, contributes to poor health-seeking behaviors among people in Afghanistan. This is aggravated by a lack of fered and difficult access to nutrition services, difficult terrain, insecurity, lack transportation, lack of money for transport and long as and lack of female health workers at the target health facilities. There are also constraints on young children and women's roposed project aims to address these issues in a sustainable manner by working to increase the level of awareness through h workers to the communizes on availability of nutrition services at the health facilities. Nutrition programs should be implemented in, and by linking the nutrition project to the health project.
