Project Title :		emergency mobile health services to adults in Terekeka County of Central	o IDPs and vulnerable host populations I Equatoria State							
Allocation Type Category :	Frontline services									
OPS Details										
Project Code :		Fund Project Code :	SSD-17/HSS10/SA2/H/NGO/6471							
Cluster :		Project Budget in US\$ :	90,000.00							
Planned project duration :	6 months	Priority:								
Planned Start Date :	01/08/2017	Planned End Date :	31/01/2018							
Actual Start Date:	01/08/2017	Actual End Date:	31/01/2018							
Project Summary :	Provision of integrated mobile emergency health services to IDPs and vulnerable host populations in Terekeka county Central Equatoria state, at a costs of 90,000 USD will deliver quality emergency curative, prevention and referral services to 15000 hosts and IDPs population (3750 Men 5252 wom 3750 girls and 2248 boys) including women of child bearing age, youth, elderly, and the disabled in and host communities the two payams Mangala with people and Gemeiza Terekek County Central Equatoria State. The project planned activities will include cholera prevention and control through cholera treatment centre and undertake OVC campaign. The project will also support communities to access primary health care services through a mobile clinic.

Pregnant and Lactating Women	0	580	0	0	580
Indirect Beneficiaries :	1	I			
Catchment Population:					
Link with allocation strategy :					

There has been repeated insecurity in Terekeka due to the longstanding tensions between Mundari, Bari and Dinka communities caused by the movement of Mundari pastoralists during the dry season from Terekeka through territory to the south belonging to the Bari community. The administrative changes brought about by the Government of South Sudan in late 2015 with the division of Central Equatoria into three new states, without accompanying documents delineating the borders between those states also gave new impetus to historic land disputes. Following increasing tensions between Murle and Dinka groups in Jonglei State in late 2016, Dinka militia groups began to mobilize in larger numbers a bolstered force in the Jonglei area that became more assertive in peripheral areas to Jonglei state including Mundari territory in Gemeiza. Some members of that militia were alleged to have attacked Mundari villages in the area following the ambush in April 2017.

Intercommunal rivalries in the area are likely to persist in the area in the long term and based on recent incidents, violence related to this rivalry appears cyclical and likelihood of the movement of militia groups during the cattle migration seasons in the second half of the rainy season (inter agency assessment report published by IOM DTM June 2017). Two cholera cases have been confirmed and Ten suspect cholera cases have been reported since 28 June 2017(MOH-WHO Republic of South Sudan cholera response updates as of 30 June). The "Provision of integrated emergency health services to IDPs and vulnerable host populations in Terekeka county Central Equatoria state project" to be implemented in this allocation will scale-up the both curative and prevention health and nutrition services in the two payams of Mangala and Gemeizia by providing vaccination, treatment, referral, health education, strengthening community participation in health service management and disease surveillance through mobile primary health care together with primary health care facility. IHO has two-year's experience in providing health and nutrition service to vulnerable communities and as a national organization well position us to undertake community programs in a disputed location.

#### BACKGROUND

## 1. Humanitarian context analysis

For decades, South Sudan seen progressing violence, the return of violence in December 2013 in South Sudan, impacted greatly on the already weak social, economic and political structures. Creating new forms of conflict, as a result, tens of thousands people majority of them women, girls, boys, elderly people and people with disability have been displaced across the country. Among the emerging and uprising conflict include the Inter-communal violence and insecurity, with the most recent one in Terekeka County. This violence has created an emergency by displacing close to 27816 people according to the inter agency assessment report published by IOM DTM June 2017. IDP have exerted pressure on the already weak system of the host community and the two communities are a state of emergency by witnessing high rates of morbidity and mortality related to both communicable and non-communicable diseases such as malaria, acute watery diarrhea, Pneumonia, trauma, measles, etc.

The most affected are children under-fives as they lack immunization service as well as proper Infant young child feeding, pregnancy women hardly survive child birth as they develop delivery complications lack of delivery facilities and complicated with poor referral services. The two communities continue to rely on one poorly facilitated and under staffed primary health care facility that lack the capacity to provide the much needed healthcare service, overwhelmed increasing needs in the area due to the recent crises due to cholera, increase malaria cases, economic meltdown hiking prices of commodities as well as limited access to food.

The IDPs have resolved to stay under displacement until the disputes in the home land are resolved but with less hope for quick interventions and continued mobilization of involved parties to solve the issue through fighting the emergency already created seeks emergency response to 15000 people who need health and nutrition services.

## 2. Needs assessment

Inter-communal violence and insecurity in May forced thousands of people to flee their homes in Terekeka, Central Equatoria and seek shelter on the two payams of Gemeiza and Malang. (UN OCHA Humanitarian Bulletin South SudanIssue 9 | 12 June 2017). According to the inter agency Terekeka Rapid Assessment Assessment Report | 8 - 12 June 2017 published by IOM DTM South Sudan, reported that the people displaced by the Inter-communal violence in Terekeka is not the first of this kind in the past years, several other displaced have occurred before creating a growing emergency situation in the area. Accordingly to the WHO-RSS MOH situation Report on Cholera in South Sudan 3 February 2017, 22 cases have been reported in Terekeka County with 8 deaths indicating a high case fatality. According information obtained from the Terekeka CHD by 18 July 2017, there is no functional Cholera Treatment Centre in the location, Terekeka PHCC originally hard a CTC but this is currently nonfunctional due to lack of supplies like tents, cholera beds among others. The host people and IDPs coming in the two payams of Mangala and Gemeizia largely need health services, nutrition services and NFIs. The leading causes of morbidity include Malaria, Pneumonia, Watery Diarrhea, among children and cholera outbreak. The high prevalence is attribute to limited access to primary health care services as the host communities and IDP rely on one open and functioning Primary Health Care Unit (PHCU) supported by ADRA on Wanyang Island for support this it also faces limited human resource and shortage of drugs. The IDP communities have not received any form of health sensitization activities in the last six months even though they drink water directly from the river Nile while practicing open defecation prevalent across all IDP settlements. As a result there has been a cholera outbreak in the location.

## 3. Description Of Beneficiaries

The project will Increase access to lifesaving healthcare and cholera epidemic prevention to 15000 hosts and IDPs population (3750 Men 5252 women, 3750 girls and 2248 boys) by undertaking life-saving interventions including, cholera treatment and vaccination, screening of children for SAM and referral for treatment, health education, EPI, antenatal care, basic HIV/AID counselling testing and referrals. The beneficiaries are identified based on the vulnerability (Women, children and people with disability).

# 4. Grant Request Justification

The allocation prioritizes Terekeka County as an emergency response location for health and nutrition intervention. The location has seen constant violence which continue to threaten mostly children, women and elderly. The occurrence of cholera outbreak has worsened the situation in a location where 15000 people targeted for this project. There is no functional cholera treatment centre in the County and this calls for urgent establishment of the center to save lives. In addition the target IDP and host Population lack access to primary health cares as they rely one Primary Health Care Unit, which is under staffed and with limited drugs and supplies. Impact Health Organization has studied the humanitarian situation and being a national organization with background experience in implementing nutrition and health in conflict affected areas in South Sudan gives an upper hand on understanding of the local context, local networks as well as the capacity to provide the most critical services during emergencies. We intend to maximize the allocated funds through an integrated response plan to tackle health, mental, nutrition disease burden by scaling-up service in the underserved locations through community participation. We shall complement the existing nutrition services and health services by working close with other partner organizations to tackle the highest cause of morbidity in the area.

## 5. Complementarity

The project will complement other partner programs in effort to combat cholera outbreak as well reduce mortality and mortality in the target locations. There limited access to primary health care services as communities are dependent one primary health care centre. This project seeks to improve on coverage, reaching more vulnerable communities in the County. IHO will expand into remote, rural locations to reach populations in need. Given that fact that the County is prone to cholera outbreak, the project will address the challenges of lack access to treatment and awareness. This project has been developed based on the needs of the most vulnerable populations.

#### LOGICAL FRAMEWORK

#### **Overall project objective**

To reduce the impact of morbidity and mortality associated with communicable diseases, tropical diseases and malnutrition among IDP and host communities in the two payams of Mangala and Gemeizia and locations affected by cholera in Terekeka county's by reaching 3750 Men 5252 women, 3750 girls and 2248 boys.

HEALTH		
Cluster objectives	Strategic Response Plan (SRP) objectives	Percentage of activities
Essential clinical health services are inclusive and implemented with dignity targeting specific needs of vulnerable populations	SO2: Protect the rights and uphold the dignity of the most vulnerable	60
Prevent, detect and respond to epidemic prone disease outbreaks in conflict-affected and vulnerable populations	SO1: Save lives and alleviate the suffering of those most in need of assistance and protection	30
Improve access to psychosocial support and mental health services for vulnerable people	SO1: Save lives and alleviate the suffering of those most in need of assistance and protection	10

**Contribution to Cluster/Sector Objectives :** The aim of the project is to provide lifesaving health care and strengthen community capacity through training and awareness to reduce the disease burden in the target locations. This project will strengthen health staffing, drugs and supplies availability, screening, case management and referrals, disease surveillance and health and community participation in the two payams Mangala and Gemeizia Terekeka county's by reaching 3750 Men 5252 women, 3750 girls and 2248 boys during the 6 months of implementation by supporting the Cluster objectives 2 and 3.

#### Outcome 1

Improved access to basic preventive and curative health services to 5430 children, men and women in terekeka County including both IDP and host communities in the two payams of Mangala and Gemeizia

# Output 1.1

# Description

Reduce morbidity and mortality due to cholera through detection and adequate response to control cholera outbreak

#### **Assumptions & Risks**

The availability of service delivery guidelines/protocols for services included in the essential service delivery package would ensure that standard services are provided for individualized care.

A formal and functional referral linkages are established between the different service outlets starting from the community level.

Community accept the cholera vaccine as a means to protect themselves against cholera,

Communities educated on cholera prevention continue to practices safe behaviors to protect themselves against cholera

cholera cases may reduced as the rainy seasons comes to an end and due to vaccination/

# Monitoring & Reporting plan

IHO will develop a monitoring and Evaluation plan for this project; and will work closely with the cluster team, Terekeka County Health Department and the SSHF TS to ensure quality programming is affected. The performance-monitoring plan includes alignments to Health Cluster M&E standards with standard Cluster tools including goals and objectives, questionnaires, data sheets and analysis mechanisms integrated. Data will be collected using the standard MOH data collection tools such as OPD registers, Monthly and Weekly report tools among others. Standard Indicators will be used to measure progress at mid and final stages of the project. All activities within the project will be regularly monitored and results against indicators will be collected in monthly reports as well as for each intervention report. A mix of quantitative, qualitative, participatory, and observatory means of data collection shall be employed for collecting data against key indicators and the findings shall be incorporated into the reports.

For the monitoring and reporting progress and achievements of the project activities will be entirely responsibility of the Health team consisting of the Program coordinator, Program Officer, clinicians and health promotion officer among others. IHO project team will promote reporting by producing daily activity reports, weekly and Monthly report as well as donor reports. To promote reporting the project officer will share data daily through EWARN reporting system. The CTC will have an activity plan and as well an activity plan will be developed by the mobile team rotating within the sites in the mobile fashion.

The reports will show progress focusing on the number of people reached, by sex, age and location, which shall be share to the donor and relevant Clusters. The Mid-project report will provide for progress made per activity and the final report will include among others demonstration of the long-term impact. To avoid duplication of activities IHO will work with other partners (ie. NRC) responding in WASH and Health activities in Terekeka County to identify who is working where and share experience.

To measure progress, every activity shall be documented using specific activity Monitoring matrix where the number of people reached by sex, age and location are recorded. IHO will coordinate all efforts with Community leaders through coordination meeting to share experience and gaps for scaling up and engaging them in field activity monitoring. At the field level, regular monitoring visits conducted by IHO Juba based staff will use cluster-approved systems to measure progress against the work plan and towards achieving the desired results and project objectives. Data collected from field visits will be used to report to the cluster on a monthly basis, with additional narrative and financial reports provided to SSHF Finance Team as per contractual requirements. Cluster recommended reporting lines will be fully adhered to such as 5W matrices. Community participation in project monitoring and evaluation will be done which will involve utilization of single sex focus groups, same age peer group discussions to obtain accurate feedback from beneficiaries as an accountability mechanisms aimed at implementing lessons learnt and avoid repetition of implementation short falls in coming/ongoing projects. To ensure proper Monitoring and Evaluation of the project finances, the Project coordinator, WASH Technician and WASH Officers shall be in charge of project finances spending and will report to the organization Finance and Administration Officer. The Finance Manager will track budget lines and ensure all activities funded are accounted for using the laid down financial regulations. The finance Manager will compile financial reports, which will be shared with the donor.

## Workplan

# OTHER INFO

## Accountability to Affected Populations

IHO will promote transparency during the project implementation by directly involving the community in every stage of the project to ensure clear understanding of objectives of the project, expectations and stakeholders. IHO has incorporated the Commitments on Accountability to Affected Populations (CAAP) into all relevant statements, policies and operational guidelines including incorporating them in staff inductions. IHO ensures facilitation of the provision of feedback from affected people on the services. All project activities will engage local authorities to oversee their implementation. IHO will also conduct evaluation exercises involving men, women, girls and boys. The feedback Informationwill be available to local communities in local languages; During implementation, teams are recruited with attention to a balance of women and men, cultural diversity and age. During the community awareness sessions.

## Implementation Plan

The project is the result a result the humanitarian response plan, specially this projects follows within the Health Cluster priorities. Therefore, during implementation IHO will work closely with the Health and Other relevant clusters. In the same regard, IHO will work closely with other relevant Health partners by strengthening the coordination mechanism with government and other relevant partners. The community capacity will be strengthened at process of the project implementation by ensuring community members participate in the planning, delivery and sustainability of the activities. The operation of the Mobile clinic and the CTC will be supported by UNICEF AND WHO core pipeline supplies. The Two mobile clinics will be operated in two payams of Mangala and Gemeiza and each will work 2 days in a week. The project will be carried out through the direct engagement of key project staff, such as the Program Coordinator, Health Officer, Clinicians, Health promotion Officer, Vaccinators among others to ensure the maximum impact of the intervention, IHO will strengthen existing structures and working with available human resource. Project implementation will cut across other thematic areas such as protection and Nutrition with activities such as protection and nutrition messaging incorporated into activities. IHO will implement each stage of the project in collaboration with these stakeholders and aim to include representatives from all stakeholders in training and capacity building components.

Coordination with other Organizations in project area								
Name of the organization Areas/activities of collaboration and rationale								
NRC Referral, OVC campaign, CTC								
Environment Marker Of The Project								
A+: Neutral Impact on environment with mitigation or enhancement								
Gender Marker Of The Project								
2a-The project is designed to contribute significantly to gender equality								
Justify Chosen Gender Marker Code								

IHO mainstreams gender into Health programming by assessing gender-specific needs and identifying appropriate responses to address the particular concerns of women, men, girls and boys during the assessment of health needs in the project locations. Sex and Age dissagregated data is recorded; Among the ways IHO under takes to promote gender includes holding a series of key informant interviews, focus group discussions (FGDs) with the intervention communities. The result is a strategy that incorporates the view, opinions and needs of all men, women, boys and girls and seeks to address existing gaps. It is through this process that IHO identifies the Health priorities for both men and women in terms of needs. At all stages in programme planning and design, gender mainstreaming is a key priority. IHO aims to improve the well being of women, girls, boys and men. These data collection methods will aim to collect information about the perceived risks in accessing services and risk with the community ie. SGBV against women and girls . In order to incorporate the elderly into beneficiary numbers, IHO will work with local community leaders to identify this group, using IASC guidelines . Data will be dis-aggregated by gender and age to have much more intense impact on the services.

#### Protection Mainstreaming

Protection mainstreaming into the project has been integrated into the entire programmatic cycle from the needs assessment, to the implementation and subsequent winding up. Firstly the "Do No Harm" principle has been factored. From the initial stages of conceptualizing a project, to hiring staff, acquiring materials, implementation, IHO will examine the potential negative and positive impact of programming decisions on the conflict context; while ensuring expectations are not overly raised and considering who conducts the project activities with ethnic safety in mind. Some of the concepts will need to be introduced carefully or be addressed in smaller groups or individually. Tools and inputs that could later be used as weapons such as pangas and knives will not be provided to the communities. Safety and dignity of beneficiaries will be prioritised; female beneficiaries will be provided with appropriate hygiene and dignity kits through the WASH project. Facility Based WASH infrastructure will be gender and protectively appropriate; lockable and fitted with lights. The project will seek to strengthen and support self protection and will work in collaboration with other protection actors. The project will also address protection lssues such as rape by providing sensitization to communities and treatment to victims. The project will seek to analyze dividers and sources of tensions between groups; analyze connectors between groups and across groups and consider implicit ethical messages associated with the project. All project training will incorporate protection issues. In working with the local authorities, IHO will constantly analyzed the risks and opportunities linked to engaging with government dynamically, in view of the conflict analysis and regular informal monitoring of the context.

#### Country Specific Information

## Safety and Security

The project is going be implemented in Terekeka County. The security situation in the area, remains calm in some locations but with some tension in some of payams of the county. However, this does not threaten the security and safety of our staff. IHO is cooperating with both the opposition and the government respectively to determine the safe staff movements in the area. IHO puts life of its staff on the front agenda and will ensure that every staff is brief about the situation and incase of intense insecurity the staff will be evacuated.

#### Access

Terekeka is accessible by road and some location by water during dry and wet seasons. Although some locations are of the county are hard to reach during the rainy seasons. However the presence of the field office makes logistical preparation and operation easy.
