## Link with allocation strategy :

#### Cluster objective 1, 2 and 3.

IRW intends to restore access to water and sanitation through local community participation for the underserved and crises affected IDPs, learning and health institutions in Lainya of Central Equatoria State. IRW will achieve this through major rehabilitation of collapsed / defunct wells with hand pumps through well development, reconstruction of the platform and replacement of the hand pumps. Resiliency will be ensured through building capacities of WMCs in Logwili, Kenyi, Lainya and Mukaya Payams of Lainya county department of water and sanitation. IDP sites and health facilities that do not have water supply and sanitation facilities will be targeted with new drilled boreholes. To ensure proper use, maintenance and care for the water points, IRW will form water management committees who will be elected by the water users in each of the sites. The committees will be trained using the standard manual and completed water points will be handed over to the committees on behalf of the water users. IRW will in turn use these committees as agent of peace in the affected communities. Specific session on peace building will be introduced in the curriculum.

To strengthen the O&M, IRW will initially target to ensure that there is at least 3 hand pump mechanics for 1 borehole and that the hand pump caretakers within the water management committees are oriented to properly carryout the routine / daily checks of hand pumps. Each caretaker will be equipped with the essential tool pieces for their work while the hand pump mechanics will be fully equipped with complete India Mark II tool kit. IRW will target 93 hand pump mechanics and 31 caretakers in this intervention. Women will be highly encouraged to take up the position of the hand pump caretakers due to their frequent visit to water points and guaranteed presence in the village. Hygiene messages that are culturally tailored to South Sudanese context will be disseminated to all the beneficiaries through the water management committees, discussion and using print media.

IRW EP&R in CES; - To carry out efficient EP&R strategy efficiently and effectively in South Sudan and especially in regard to the current emergency due to the civil unrest, IRW South Sudan has fostered collaborations, partnerships, integration, and resource leveraging with all its partners worldwide such as Islamic Relief USA, Germany, UK and Canada (Islamic Relief Disaster Emergency Committee) to increase staff expertise. Already a number of pledges have come up. Currently the headquarters has seconded 2 additional staff to its South Sudan program to scale up its operations and provide strategic direction to support WASH public health preparedness and response efforts. They will manage preparedness and emergency response programs and platforms for emergency response operations—including the Emergency Operations Center (EOC), the Strategic Stockpile. Local committees on the ground will be trained on Disaster Risk Reduction/DRR and equipped with response tools. All IRW staff and available CES WASH staff will be provided with program support, technical assistance, guidance and fiscal oversight so as to be able to coordinate and execute preparedness and response activities.

BACKGROUND							
1. Humanitarian context analysis							

IRW is currently implementing SSHF SA1 fund in Lainva County with specific attention to WASH needs to the conflict affected communities of Lainva County.

IRW conducted spots check in Lainya township and its surrounding Payams and reassessed the existing needs and observed that the communities in Lainya who previously fled Lainya have started returning in small numbers. New arrivals have been reported in Wonduruba and Lainva town (Sources from County and State RRC exact figures are yet to be confirmed). These people according to interviews conducted with IRW WASH Coordinator said they have been hiding in the bush since the conflict broke out in 2016. Some of the host communities are still in refuge in the neighboring Congo and Uganda and others fled to Juba town. Despite few partners are providing services, there still remains unmet gaps that still require continued WASH services so people could resume cultivation in the rainy season.

With the crises that hit the county, Inter-agency rapid needs assessment (IRNA) and IRW-led assessments were then organized and conducted in Lainya county. The objectives of the assessments are; to assess the population displacement and develop cholera preparedness plan to identify the current level of access to clean water, improved sanitation and hygiene practices and identify key gaps in WASH services in the four Payams and its surroundings and make recommendations to meet pressing needs and gaps and the way forward.

Water facilities (mainly boreholes) are available in the abandoned areas (locations where people settled before the crisis /trading center) the team visited. However, the availability of water in the locations where people are displaced is still challenging as the available WASH services provided by NGOs are still inadequate.

Sanitation situation where people are currently settling is characterized by open defecation in the surrounding bushes due to the lack of sanitary facilities and there is no solid waste management mechanism in place despite few efforts was made by WASH actors. 50% percent of the assessed population is aware of basic hygiene promotion practices but most of the households and individuals are limited by the inadequate hygiene kits and WASH NFIs and women and girls have limited access to dignity kits and they are using old clothes during their menstrual periods.

#### Hygiene:

• Diarrheal cases have been reported due to open defecation.

• The displaced populations cannot afford soap for hand washing and other hygiene practices.

 50% percent of the assessed population is aware of basic hygiene promotion practices but most households and individuals are limited by the lack of hygiene kits and WASH NFIs.

Women and girls have limited access to dignity kits and they are using the old clothes during their menstrual periods.

· WASH NFIs are inadequate despite partners conducted several distributions

#### Solid Waste:

 Limited or no solid waste management mechanism in the current locations of displacement. IRW has conducted solid waste management campaign with the trained CHPs

#### Sanitation

Sanitation situation where people are currently settling is appalling due to limited sanitation facility at home and communal places

#### 2. Needs assessment

During the implementation of the ongoing SSHF SA1, IRW conducted a need assessment between July 10th to 15th 2017 to evaluate its responds capacity through coordination with SSUHA, SSDO (local NGOs) TDH and plan International (INGOs) and below are the findings:

Findings of the assessment :

#### 1.WASH

#### Water supply:

Water availability in the locations where people settled before the crisis is sufficient - only that some boreholes require improvement and rehabilitation. There are no water pumps and protected wells at current locations of displacement, displaced population drink water collected from streams. Almost all households fled from their homes without household utensils and most have a maximum of 1 water container used for both water collection and storage. IRW has ear-marked to drill only 2 boreholes in the second quarter and has only so far rehabilitated 7 defunct hand pumps but yet it is not sufficiently enough to cover the existing water gaps in Lainya.

#### Sanitation:

2 of 5 households have latrines and bathing shelters in their original areas of settlement, households without sanitary facilities shared from those in possession. There are only few latrines and bathing shelters in the current locations where population is staying as IDPs. Open defecation is at the peak of excreta disposal despite 6 blocks of latrines were located in the 4 Payams of Lainya.

Solid Waste:

IRW is conducting solid waste management mechanisms in current locations of displacement.

Hvaiene:

85% of assessed population is aware of basic hygiene promotion practices but most households and individuals are limited by insufficient hygiene kits. Women and girls lack access to dignity kits and are using old torn cloths during menstrual circles.

## Recommendations:

Revamping of water sources, establishment of water point management committees, training of water pump mechanics and equipping them with working tools and spare parts, distribution of hygiene kits and WASH NFIs and refresher hygiene promotion campaigns. Summary of the general humanitarian situation in Lainya county:

About 53, 223 people (8,451 HHs) have been badly affected by the fighting that ravaged the area. Most of the people fled the villages and

are taking refuge in the bushes ranging from 8 km - 16 kms from their former places of settlement though few have started returning to their places of origin.

- The most vulnerable groups are children, women and the old. They are sheltering under trees, drinking water that is not safe, have limited access to medical/health services, limited access to adequate food though IRW, WFP and other partners have distributed food packages to families, limited access to good shelter for the family especially the children, pregnant women, lactating mothers and the old and no access to education for the children .

- Freedom of movement is very limited. People could not access their farmlands due to fear of being killed

- The big worry of the people is that, the rainy season is has started; this will make the situation even more badly.

## 3. Description Of Beneficiaries

a. Conditions in which project will be implemented:

Even if there is a reassurance of government in guaranteeing access to population affected by the conflict in Lainya, people still live in fear. Some of the potential risks include:

(1) looting of supplies in the outskirts,

(2) attack on civilians causing further displacements,

(3) illegal roadblocks /check points and related demands "extortion", and

(4) attack in humanitarian aid workers and convoys during relief intervention.

IRW will always maintain coordination with Clusters and UN Daily Security Sitrep for advisory on security before IRW access the field location

b. Plans based on the needs analysis:

IRW- SS intervention in general will benefit 16,500 (men 1,790, women 2,840, boys 2,750 and girls 3,8500) direct and indirect beneficiaries in Lainya County affected by conflict that erupted in July 2016 and Cholera preparedness that continued to claim lives in other parts of South Sudan. 11,230 people from IDPs (Men 1,90 women 2,840 boys 2,750 and girls 3,800) and 5,147 (Men 756, Women 1,713, Boys 1,042 and Girls 1,636) people in host communities will be provided with access to safe water as per agreed standards will benefit from the same services mentioned above.

100% of the intervention will be prepositioned to Lainya where most of service deliveries are unmet.

c. Components of intervention and results:

WASH

• 16,500 people will have improved access to potable, clean and safe water through rehabilitation of 16 defunct hand pumps, 05 new boreholes and 04 emergency latrines in Lainya

• 05 new water points drilled by IRW installed by IM II keep functional

• 26 water points keep functional as due repairs made by hand pump mechanics in Lainya

• 16,500 direct and indirect persons in Lainya reached with hygiene messages using WASH IEC materials.

• 31 Water Management Committees (of 5 members each) will have been formed and under gone training to ensure orderliness and better facility management in Lainya

 250 host and IDPs will practice ODF through use of the sanitary facilities and practice hand washing using the 5 blocks of emergency latrine facilities constructed at the selected sites in Lainya County

• Construction of 5 blocks of emergency latrines each with 10 stances each block with urinal and well covered with wall curtain for purpose of privacy to both women and men.

**Emergency WASH/NFIs** 

• 1,000 most vulnerable IDPs HHs will have benefited from WASH NFIs (Mosquito Nets, collapsible Jericans, PUR/Aqua tap and laundry soap) in Lainya

1,000 IDP women and girls will have their hygiene improved due to availability of women dignity kits in Lainya

#### 4. Grant Request Justification

IRW is operational in South Sudan since 2004. IRW has 2 drilling rigs (All are currently operational in Warrap State), 5 vehicles and qualified WASH staff. Other offices are located in Eastern Equatorial and Tonj North in Warrap and presently opened a satellite office in Yei County. IRW has a number of offices worldwide with accumulated wealth of experience and technical knowhow through partnership with other stakeholders. Given the short nature of the SSHF project, IRW's existing capacity in the proposed location is well positioned to implement the project in timely manner. Women are care givers and due to their chores in handling the water and therefore will be targeted directly. Most of hygiene issues have a bearing on women chores.

IRW interventions are designed to enhance peaceful coexistence amongst communities competing for water and conducive school learning environment. IRW is currently an active member of cholera task force, WASH and FSL Clusters and a state cluster member. IRW–SS through CDF drilled about 100 boreholes (2010-2011). 2013 IRW drilled 3 additional boreholes with support from EU Peace Stability Quick Impact Fund and 4 from CHF project. These achievements maybe reversed given the steady high number of IDPs displaced in Lainya in Central Equatoria. Reduced number of organizations working in WASH sector. IRW has implemented UNICEF PCA Guinea Worm Eradication WASH project in Kapoeta East in 2014 and a WASH recovery project in 2016 in EES. IRW is currently implementing emergency projects in Mahad and Mangatein IDP camps with funding from IRUSA and IR Canada partners. IRW is 2017 rehabilitated and drilled over 70 boreholes under funding from UNICEF, IR Disaster Emergency Department/DEC, IR Canada, IR USA, IR Germany, IR Sweden , IR UK, UNMISS, IOM, WFP and BMZ.

IRW and IOM coordinated assessments in Lainya from July 2017 show that human waste was indiscriminately disposed of in the bushes oblivious of the negative health repercussions. Young children's waste was neither disposed of safely. Children fecal matter was thrown outside the yard (40%) buried in the yard (30%), left on the ground (20.0%) or thrown/buried in the bush (20.0%). Open defecation is widely practiced. Lack of water storage facilities and long queues was noted. Most HH had very low latrine coverage, few available latrines were full or collapsed, in some cases 20 HHs shared 1 latrine which is way below SPHERE and WASH cluster. WASH Cluster will coordinate NGOs ensuring no duplication and technical information sharing.

#### 5. Complementarity

There is only a small number of I(NNGOs) present in the areas of intervention in Lainya and most of the operate from Yei County due to limited infrastructure in Lainya. Limited food supports to the IDPs for the initial 6 weeks reported though IRW distributed F/NFIs with funding from IR USA and Canada partners. The Relief and rehabilitation commission is focused on the regional distribution of IDPs and allocation of land, however, hardly provides any other items. Plan International and UMCOR have currently reduced their activities in Lainya. MEDAIR will be covering Shelter, WASH and NFIs in areas IRW did not cover in this intervention, furthermore, IRW and the other WASH actors will be in the same coordination meetings to share their responds plans and deliver services in an even manner.

Islamic Relief has been working in Central Equatoria for over 10 years. This project is building on existing broken down boreholes and constructs new ones. The project will also meet immediate WASH NFIs need to reduce shock from the most vulnerable IDPs. The organization's compound and drilling equipment can also be used by this project.

The project is based on HRP guidelines for NFIs/FIs and WASHES projects and especially SPHERE standards in emergency context which have been acknowledged by the global humanitarian cluster among others. Activities in Cross-Cutting Issues are based on findings from Technical Working Groups. Islamic Relief Worldwide (IRW) will also involve its regional office into the project, thus benefitting from a range of experiences gathered throughout the Region of East Africa and the Horn countries.

Moreover, the project is coordinated with the activities of the international community in South Sudan. IRW is a member in the UN Clusters for Food Security, Livelihood and WASH.

#### LOGICAL FRAMEWORK

#### **Overall project objective**

"Improved Access to Adequate Life Saving Water, Sanitation and Hygiene (WASH) Supplies and Infrastructure to 16,500 Conflict and Cholera Affected Vulnerable Population of Lainya in Central Equatoria State of South Sudan."

#### WATER, SANITATION AND HYGIENE

Cluster objectives	Strategic Response Plan (SRP) objectives	Percentage of activities
Sustain access to water, sanitation and hygiene promotion services for vulnerable population affected by conflict, disease outbreaks, acute malnutrition and floods.	SO1: Save lives and alleviate the suffering of those most in need of assistance and protection	100

Contribution to Cluster/Sector Objectives : • The affected population in Lainya have timely access to save and sufficient quantity of water for drinking for domestic use and hygiene (500 beneficiaries/water point)

• The affected population in Lainya are enabled to practice safe excreta disposal with dignity in a secure environment (50 users/each latrine stance)

• The affected population in Lainya have knowledge and appropriate behavior to prevent and mitigate WASH related diseases (e.g. Acute Diarrhea, Cholera) and practice good hygiene (1000 people receive hygiene message per each hygiene promoter)

• The crises affected households in Lainya will benefit from the WASH NFIs and hygiene/dignity kits to reduce shocks (1,000 most vulnerable people hhs targeted)

#### Outcome 1

Clean and safe water supplies re-established to serve 16,500 affected individuals for newly drilled and rehabilitated boreholes in a timely manner.

## Output 1.1

## Description

5 new boreholes and drilled and installed with IM II with adequate potable, clean and safe water supply for 2,500 affected populations of Lainya County

## Assumptions & Risks

boreholes drilled/constructed and maintained and used properly by beneficiaries

Conduct of mass hygiene campaigns at home-steads and communal places to reach 16,500 people through training of Community Based Hygiene Promoters

## Additional Targets :

## M & R

## Monitoring & Reporting plan

IRW Humanitarian Department will maintain overall direction and supervisory responsibility for the management and monitoring of the emergency operation. Monitoring visits will be conducted on a regular basis to ensure that project implementation is timely, appropriate, meeting quality standards and are both effective and efficient. IR South Sudan field staff in Yei and Lainya will be continuously present in project areas. Operational oversight and key operational decisions shall be taken during daily team meetings under the leadership of the Head of Mission and the WASH Coordinator. Detailed implementation plans (DIP) will be made and adhered to. Review of operations and strategic/tactical decisions on the overall programme will be taken during weekly country management team meetings that are held monthly taking feedback from field teams and staff, senior team members and monitoring officers, visiting project sites. Monthly activity reports will be made and progress noted.

Procurement & logistics will check for before distribution; Beneficiaries will be informed of entitlements through banners and announcements; Field extension workers will undertake post-distribution spot checks to check for quality and quantity supplied to beneficiaries. Beneficiaries will be provided complaints phone numbers and contact details; beneficiary muster rolls will be retained with signature of beneficiaries receiving items. A real-time or post-emergency evaluation will be undertaken by IRSS to assess for impact, deliverables, appropriateness, timeliness and quality of this project component. Post-completion lessons learned workshop will also be held with key finding communicated to IR South Sudan and donors/SSHF through the final report.

Activity plans will be made together with the representatives of the line ministry in accordance to the submitted master plan. The WASH Project Officer and the WASH Coordinator in Juba will take up the responsibilities for implementation and generate the weekly, monthly, quarterly and final reports to the South Sudan Head of Mission who in turn will forward it to the IRW Regional Office in Nairobi and HQ in Birmingham. Final and narrative reports will be submitted to the donor (SSHF) according to the reporting deadlines.

GPS for all the structures developed will be taken and pictures of the development process and final product will be taken capturing the visibility boards. Water management committees will sign against the certificate of completion of all the new and rehabilitated water points while the camp manager will sign for the emergency latrines. Elements of access to WASH services will be measured on completion of items of intervention and compared to the baseline to evaluate the impact and level of achievement of the immediate objectives.

THER INFO													
ccountability to Affected Populations													
ne intervention will be implemented through the involvement of community membe pordination with other organization working in the impact area. IRW will ensure ber												and	J
nplementation Plan													

4. Rehabilitate 26 defunct water points installed with IM II hand pump in Lainya, Central Equatorial State.

- Conduct water quality testing in 31 boreholes (5 new and 26 repaired and rehabilitated)
   Construction of 5 blocks of emergency/communal pit latrines each with 10 stances installed with hand washing facilities in Lainya
   Official handing over of facilities to community leaders and county authority
- 8. Community awareness, mobilization and participation
- 9. Facilitation of hygiene and sanitation awareness sessions using PHAST methodology
   10. Mobilize and train 33 Community Based Hygiene Promoters on hygiene and sanitation program trained on PHAST approach
   11. Organize 10 garbage collection campaigns in IDP camps in Lainya County.
   12. Assessment of most vulnerable communities for NFIs and MHM distribution

- 13. Registration of most vulnerable IDP households for WASH NFIs and MHM kits
- 14. Issuance of distribution coupons/cards
- 15. Conduct of WASH NFIs and hygiene kits (MHM) distribution

(Please see annex on activity plan attached)

## Coordination with other Organizations in project area

Name of the organization	Areas/activities of collaboration and rationale
UNOCHA, IOM and UNHCR	Lainya for the purpose of coordination and support
TDH	Lainya County: Coordination meetings in various forums to avoid cross-over
Plan International	Lainya County: Coordination meetings in various forums to avoid cross-over
ACROSS	Lainya County: Coordination meetings in various forums to avoid cross-over
SSUHA (NNGO)	Lainya County: Coordination meetings in various forums to avoid cross-over
SSDO (NNGO)	Lainya County: Coordination meetings in various forums to avoid cross-over
CERFORD (NNGO)	Lainya County: Coordination meetings in various forums to avoid cross-over

## Environment Marker Of The Project

A+: Neutral Impact on environment with mitigation or enhancement

#### Gender Marker Of The Project

2a-The project is designed to contribute significantly to gender equality

#### Justify Chosen Gender Marker Code

In the implementation, IRW will ensure particular gender is supported with activities that enhance their welfare and self-esteem. Women headed households will be prioritized and represented in the WMCs as women/girls are the most important persons when it comes to water collection and taking care of family sanitation and hygiene including health care. The programme will ensure that it helps to keep boys and girls in school. Latrines constructed will be gender friendly through ensuring are lockable from inside and disaggregated to avoid cases of GBV, are in well-lit areas. Hygiene awareness sessions will be undertaken in close proximity to beneficiaries' homes and good timing that will allow most women to attend without any hindrance. The project will also supply women of child bearing ages with sanitary towels so as to enable them maintain their hygiene at all times. Consultations before any commencement of activities.

#### Protection Mainstreaming

• IRW will ensure that project staff are well oriented on mainstreaming protection within the project and know their Code of Conduct. All staff are acquainted and understand the ZERO TOLERANCE for sexual exploitation and abuse.

• IRW has a clearly devised and accountable reporting and response procedures for beneficiaries facing exploitation or abuse by

humanitarian workers.

• IRW has two focal points (one at senior management level and one at field level) to monitor protection issues and deal with reports, and promote good humanitarian assistance given without conditionality.

• IRW will work with protection colleagues to provide support for victims of abuse and exploitation.

• IRW will work with GBV working group for further protection guidance and support

#### **Country Specific Information**

#### Safety and Security

IRW will fully coordinate its implementation with UN OCHA, UNDSS, other partners (INGOs and NNGOs operating in the targeted areas) and local authorities for access to project sites. Staff safety SOPs will be fully observed

#### Access

IRW will coordinate access advisory from UNDSS and local authorities e.g JVMM and RRC

#### BUDGET

"Sub Section A									
Prelimiaries (excluding the geophysical survey)									
Mobilization and Transportation of whole drilling unit to, inter-site and from the site									
Erecting and dismantling of the drilling rig unit at a site.									
Carry out drilling diam . 6 inches to depth 80 m below ground level									
Supply and Install 4 inch nominal internal diameter Plain UPVC Casings									
Provision and Installation uPVC Bore Hole End caps									
Supply and Install Permanent casing 6 inch nominal internal diameter UPVC casing									
Supply and Install 4 inch nominal internal diameter Slotted UPVC screens. Allow for taking samples of drill cuttings at two (2) meters intervals.									
Supply and insert filter gravel packing 2mm to 4mm size.									
Grout between the inner casing and the outer surface casing for top Six (6) metres.									
Borehole development work including inserting and removal of development equipment									
Test pumping step draw down and constant discharge test including installation, removal of test pumping equipment, water level observations and draw down measurements									
Undertake Water Level observation and record on Recovery									
Supply of water for drilling operations and field camp									
Carry out bacteriological, physical and chemical analysis of the borehole water.									
Borehole disinfection as specified									
Data analysis, drilling, bore hole completion reports, pump test report, hand pump installation report compilation in three hard copies and 1 electronic copy for each well.									
Supervision of borehole drilling and completion									
De mobilization of the drilling unit back to base									
Sub Section B
