

NAMIBIA

UNDAF Outcome 1: By 2010, the HIV/AIDS response is strengthened through increased access to prevention, treatment, care and impact mitigation services, especially for vulnerable groups

UNDAF Outcome 2: By 2010, livelihoods and food security among most vulnerable groups are improved in highly affected locations

UNDAF Outcome 3: By 2010, the capacity to deliver essential services is strengthened

Joint Programme Outcomes:

- 1: Increased awareness and capacity for protecting the rights of women and girls (including reproductive rights).
- 2: Increased mainstreaming/integration of gender in national development policies, and frameworks; and implementation of gender responsive KRA¹ sub-sector policies, programmes and budgeting
- 3: Enhanced well being of targeted women and girls through food security and livelihood improvement initiatives.

Programme Title: **Setting things right - towards gender equality and equity**

Programme/project Duration
(Start/end dates): _____ **36 months**

Fund Management Option(s): **Combination**
(Parallel, pooled, pass-through, combination)

Managing or Administrative Agent: _____

Total estimated programme budget: **US\$8,000,000**

Out of which:

1. Planned resources:

- Government In Kind
- Regular/Other Resources
- NGO or private In Kind
- FAO
- UNDP
- UNESCO
- UNICEF

Executive Summary

This UN Joint Gender and Development Programme proposal for Namibia is submitted to the UNDP-Spain Millennium Development Goals Achievement Fund (MDG-F) which aims to support poverty reduction efforts, promoting the kind of development which enhances individual and collective rights, capacities and opportunities. The proposal develops the Concept Note that was approved by the MDG-F Steering Committee in New York, for the thematic window on gender equality and equity.

The proposed Joint Programme, *Setting things right – towards gender equality and equity*, enables the UN System in Namibia, through the United Nations Development Assistance Framework (UNDAF), to focus its collective strength in support of the Government of the Republic of Namibia's (GRN) development priorities in Vision 2030, and in the National Development Plan (NDP3). The programme aims to promote gender equality and the empowerment of women and girls through a comprehensive, multi faceted programme reaching across national, regional and community levels. It seeks to raise the bar of understanding, sensitivity and responsiveness to pressing gender issues in Namibia.

A root cause of gender inequality is the low status of women and girls, perpetuated by both women and men, cultural norms and resource constraints on corrective or remedial actions. This root cause has resulted in differential access to resources, exclusion of women from decision-making processes and pervasive income inequalities. These issues are augmented by the impacts of HIV/AIDS and gender based violence. The challenges were also identified during the process of formulating Namibia's development goal, Vision 2030 and the UNDAF, both aligned to the MDGs.

The problems are especially true for the San community. San women and girls have been historically marginalized as a minority group and their vulnerabilities are particularly typified by limited access to: land, food and social security, economic opportunities, health services (including reproductive health services), education, protection services. These vulnerabilities are exacerbated by child marriages and their nomadic lifestyles.

FAO, UNDP, UNESCO, UNFPA and UNICEF have collaborated on the development of this proposal and on the design of this joint programme. Partner organizations have been intimately involved in the identification of gender priorities and the proposed activities envisioned through the support of the MDG-F. The joint programme targets 7 of the 13 regions in Namibia in an effort to manage the scope and mitigate risks. Regions were selected through an assessment of the proportion of female headed households, female headed households in poverty, HIV/AIDS, Gender based violence and the proportion of girl school dropouts. The planned activities are organized into three streams, each targeting specific results.

The first stream is all about services – improving the quality, quantity and usage of these. The results are pursued through raising the awareness and understanding of leaders, the media and the general population on gender issues. This is designed to make the current foundation of legislation better known and applied, as well as start to change the discourse on gender issues in Namibia. The first stream also includes a range of activities directed at support services within communities, including law enforcement, health providers and lay support services. Activities are also planned to involve and reach women and girls, with a special focus on the San and on the HIV/AIDS situation in Namibia.

The second stream of activities focuses on the Government and its machinery to provide public services that are gender responsive. Gender mainstreaming will be undertaken through special assessments of existing policy frameworks (including 4 Key results Areas in the NDP3), revisions to the exiting National Gender Policy,

PHR 

Namibia Joint Programme: Setting things right- towards gender equality and equity – October 14, 2008

accompanied by a Plan of Action and extensive training within the bureaucracy to embed gender responsive planning, programming and budgeting into Ministries.

The third stream addresses food security and livelihood issues in targeted communities. Following assessments (beneficiaries and markets) 4 targeted interventions will be implemented geared at improving agricultural practices and exploring income generating alternatives. Agricultural inputs, technical support and new technologies will be included in the work lead by FAO.

The programme is participatory, involving communities (and their traditional leaders) along side UN Agencies, Government, CSO and private sector partners. The programme seeks to ensure that while beneficiaries are aware of and access services that are available to them (including increased services such as GBV protection, reproductive health, HIV and AIDS prevention and treatment); they also have access to livelihoods and increased incomes to mitigate their low status and vulnerability in society. Mainstreaming gender in the Namibian government serves to perpetuate and sustain the programme beyond its three year horizon.

The table below summarizes the outcomes and outputs of the Joint Programme, with associated lead agencies:

<p>JP Outcome 1: Increased awareness and capacity for protecting the rights of women and girls (including reproductive rights). Lead: UNDP, UNICEF</p> <p>JP Outputs:</p> <ol style="list-style-type: none"> 1. The rights of women and girls are protected nationally through enactment and enforcement of existing legislation. 2. Women and girls are aware, understand and assert their rights (including reproductive rights) and know how to access available services such as prevention and treatment of HIV and AIDS. 3. Improved capacity of service providers to prevent, detect, enforce and report gender based violence and abuse, and to offer protection and reproductive health services and prevention and treatment of HIV and AIDS, for women and girls. 4. Strengthened national response on access to and availability of prevention and treatment services for HIV/AIDS among women and girls.
<p>JP Outcome 2: Increased mainstreaming / integration of gender in national development policies and frameworks; and implementation of gender responsive KRA policies, programmes and budgeting Lead: UNFPA</p> <p>JP Outputs:</p> <ol style="list-style-type: none"> 1. Gender is institutionalized and mainstreamed in 4 Key Results Areas (KRA) of the National Development Plan III by 2011 2. Enhanced human and institutional capacity to lead gender mainstreaming 3. Improved management of GBV sex-disaggregated data, linked with the national data system.
<p>JP Outcome 3: Enhanced well-being of targeted women and girls through food security and livelihood improvement initiatives. Lead: FAO</p> <p>JP Outputs:</p> <ol style="list-style-type: none"> 1. Food availability, access and utilization improved through appropriate agricultural practices 2. Increased incomes through diversified economic activities.

The proposal provides a Results Framework which identifies outputs at the activity / Agency level, as well as indicators for the joint program and baseline information as is available.

A Workplan and Budget is attached in Annex A and also provides information on targets, most definitively for year one. It is expected the timing and sequencing of work over years two and three will be the subject of the first annual review by implementing partners, including the 5 UN Agencies. The table below shows a summary of each UN Agency's budget, by outcome.

JOINT PROGRAMME COSTS BY OUTCOME (including 7% AOS)	PLANNED BUDGET BY OUTCOME			
	OUTCOME 1	OUTCOME 2	OUTCOME 3	Total
UNDP ACTIVITIES	1,261,413	291,575	328,490	1,881,478
UNICEF ACTIVITIES	1,423,100	64,200	203,300	1,690,600

UNFPA ACTIVITIES	626,900	469,195	0	1,096,095
FAO ACTIVITIES	0	0	1,997,504	1,997,504
ALL AGENCIES SUB TOTAL	3,577,302	824,970	3,164,379	7,566,651
M & E COSTS	51,000	51,000	51,000	153,000
COORDINATION SUPPORT & IMPLEMENTATION COSTS	80,000	80,000	80,000	240,000
JOINT PROGRAMME TOTAL	3,708,302	955,970	3,295,379	7,959,651

A management structure and roles have been defined in the proposal and include a MDG-F National Steering Committee (NSC), Programme Management Committee (PMC) and a Programme Coordination Team (PCT). NSC operates at a strategic level with overall responsibility for Joint Programme MDG-F activities. It will be comprised of the UN Resident Representative, the Director General of the National Planning Commission Secretariat and a representative from the Spanish Embassy.

The Programme Management Committee (PMC) will assume responsibility for the operational coordination of the Joint Programme and its membership will consist of relevant implementing parties such as participating UN organisations, Government representatives and civil society representatives as appropriate. The PMC will integrate work plans, M&E systems, budgets, reports, public information plans and other programme related documents and ensure that budget overlaps or gaps are addressed. The PMC is supported by a small Programme Coordination Team.

A Monitoring and Evaluation Framework has been developed to define the elements of the programme which will be monitored and those which will be evaluated. Mid term and final evaluations will be undertaken.

The MDG-F National Steering Committee (NSC) held its first meeting on the 11th October 2007 and endorsed the draft final of Joint Programme Document which had been compiled by working groups comprised of representatives of relevant Government ministries and civil society organisations as well as UN Agencies. This updated proposal is the reflection of ongoing efforts of the UN Agencies, and their Government and CSO collaborators.

PHK 

Situation Analysis

Some of the critical challenges in addressing poverty and fulfilling civil and political rights for all Namibians that emerged from the Common Country Analysis (CCA) of 2004 were inequitable access to resources, low participation of women at all levels of decision making and the lack of gender equality and women's empowerment. Both the CCA and the UNDAF for Namibia were developed through a full participatory process with government and civic society counterparts. Part of that process included an analysis of a number of key cross-cutting issues and root causes. The root causes for persistent high levels of income poverty include low economic growth, high levels of income inequality, pervasive gender inequality, as well as incapacity and loss of life due to HIV/AIDS and other disease. At the root of the problem of limited participation of women in the political process is the disintegration of the social fabric, arising from a chain of factors including migration, alcohol abuse, AIDS and poverty. The analysis identified the Triple Threat, on which the UNDAF is based – increasing vulnerability of households and eroding institutional capacity caused by the impact of HIV/AIDS.

Root cause: Low status of women

A root cause of gender inequality is the low status of women and girls. At the household level, the CCA identified cultural perceptions regarding the role and status of women and cultural and traditional practices that result in their impoverishment and economic dependency. Differential access to resources and inheritance structures tend to favour men and exclude women from decision-making processes. The structure of power in traditional society strongly favours men. There is a low representation of women in all spheres of decision-making. As women bear the heaviest burden of household responsibilities, particularly in the rural areas, they are faced with a role conflict with respect to their involvement in politics. In the public service sector as a whole, women make up 29% of the 530 management level positions, 37% of promotions and 20% of new hires². Only one-third of employers are women³. In 2002/03 women accounted for only 19% of senior management positions in companies with more than 50 employees. Among solutions suggested to deal with these inequalities are education (particularly civic education) and gender mainstreaming, designed to change the perception of men and women about gender roles and informing women and girls of their rights.

Promoting education for women and girls benefits society economically and socially. To this end, women and girls that are educated tend to have fewer and healthier children, who are also more likely to be in school. Education among women and girls increases their ability to protect themselves against HIV/AIDS. Similarly, educated women have more economic opportunities and are more likely to participate in the public sphere, which are essential in reducing poverty.

Interestingly, gender equality in Namibian education has long been the norm - in primary, secondary and tertiary education, girls continue to have higher levels of enrolment⁴. According to EMIS⁵ (2006) figures from the Ministry of Education, there are more girls than boys enrolled in all schools except for two regions (Caprivi and Kavango). In Namibia, learners only progress from grade 10 (junior secondary) to grade 11 (senior secondary) if they pass the Junior Secondary Certificate Exam (JSCE) at the end of grade 10. Each year, the Ministry of Education decides on the passing mark depending on how many learners Senior Secondary Schools can accommodate. There is more demand for senior secondary school places than the supply of such

² PSC (2004) Annual Report. Public Service Commission

³ MoL (2002) The Namibia Labour Force Survey 2000.

⁴ NPC (2004) Namibia Millennium Development Goal Report.

⁵ EMIS = Education Management Information System

PHR 

places; consequently promotion rates are not high. Only over a third of learners manage to get to senior secondary school. According to EMIS (1999) the progression rates from Junior to Senior Secondary Schools for girls in Omaheke, Ohangwena, Omusati, Oshikoto, Kavango, Kunene and Caprivi regions are far below those of boys. The EMIS figures for 2006 are not disaggregated by region but they broadly show that nationally the progression rates from Junior to Senior Secondary Schools for girls is slightly below that of boys.

Cultural perceptions lead to a lack of opportunities for women and adolescent girls as reflected in the low representation of girls in subjects that are traditionally considered to be male⁶. These perceptions and practices have a negative impact on access to and control over resources, availability of support services and women's and girls' reproductive health. Women, particularly young women, have the greatest risk of becoming infected with HIV/AIDS. The available data from the Ministry of Health and Social Services (2006) National HIV Sentinel Survey, which is mostly based on adult pregnant females, has some shortcomings. There is little data on the HIV infection rates of other groups of Namibians (e.g. male adults) as there are no other sero prevalence studies available. Although Namibia has voluntary screening centers, they are inadequately utilized. Nevertheless, the available data show that certain sites in given regions have higher rates than others. Among the sites (regions) with the highest rates of female infections are Katima Mulilo (Caprivi); Engela (Ohangwena); Oshakati (Oshana); Okahao (Omusati); Karasberg (Karas); Onandjokwe (Oshikoto) and Walvis Bay (Erongo).

Negative cultural perceptions of gender roles also contribute to high maternal mortality. According to preliminary figures for the Demographic and Health survey of 2006 Namibia's maternal mortality rate is about 449 per 100 000 live births – a figure considered to be very high (DHS 2007).

The San are one of the most disadvantaged communities in Namibia and are often regarded as the most dispossessed and marginalized. Within this group, women and girls are even more vulnerable, making them the most disadvantaged group in Namibian society. The social disadvantages faced by San women and girls are manifested in high infant and child mortality rates, poor nutrition for mothers and children, high maternal mortality rates, alcohol abuse, gender-based violence, high levels of child labour and susceptibility to HIV and AIDS.

Resulting problems: Multiple impacts of HIV and AIDS on women and girls

HIV and AIDS is the greatest threat to national development and continues to be the leading cause of death in the country. According to the 2006 HIV sentinel survey the national prevalence rate among pregnant women has now increased to 19.9% from 19.7% in 2004. Knowledge of how to reduce the risk of transmission of HIV/AIDS is widespread (between 80-90% of both women and men know at least one method⁷), but behaviour change does not seem to be happening. Girls living in impoverished conditions are outside the reach of traditional programmes and services and they lack education and other opportunities for social mobility. Girls in impoverished conditions are considered to be highly vulnerable to HIV and to unwanted teenage pregnancies due to sexual coercion, violence and abuse.

Furthermore, the majority of rural female-headed households are impoverished and particularly vulnerable to HIV and AIDS as a result of their low socio-economic status and the need to undertake risky behaviour to provide sustenance for their families. Gender and cultural roles in Namibia result in the growing burden of care and support for the infected and affected being shouldered by women. Women's lack of access to preventive methods as well as cultural norms supportive of men having multiple, concurrent sexual partners, all contribute

⁶ Human Development Report 2000

⁷ MoHSS Preliminary NDHS 2007

PHR 

to the precarious position of women and girls in the context of HIV and AIDS⁸. High risk behaviours among young men and women have been linked to alcohol abuse.

Resulting problem: Unacceptably high levels of gender-based violence

Gender-based violence (GBV) refers to any physical, mental, sexual or social harm and abuse that is directed against a person because of his or her gender or gender role in a society or culture.⁹ Gender based violence is an increasing challenge to socio-economic and human development in Namibia. One of the key contributing factors to GBV is alcohol abuse. One study reported that 44% of men believe that husbands have the right to beat their wives¹⁰ and there is widespread perception that sexual coercion within marriage is acceptable, even though by law, rape within marriage is illegal. However, there is scant data on GBV in Namibia and a real need for more research to be carried out.

Reported cases of rape and attempted rape of women increased by one hundred per cent from Independence to 2005. More recent data based on police dockets indicate that reported rapes and attempted rapes cases amounted to 1,117 in 2003, 1,151 in 2004 and 1,184 in 2005 (LAC, 2006)¹¹. These figures are equal to 60 reported cases of rape or attempted rape per 100,000 people in Namibia. Even so, a large proportion of cases go unreported and the actual numbers of rapes, attempted rapes and domestic violence cases are likely much higher. A worrying trend is that one third of all reported victims of rape and attempted rape is under the age of 18. Of course, women and girls experiencing GBV are also at an increased risk of HIV infection.

Resulting problem: High levels of food insecurity and income poverty

The CCA identified the immediate determinants of food insecurity, both at the household and national levels, as low, variable and uncertain levels of food production. This is mainly caused by water scarcity, combined with dry spells and low rainfall and weakening purchasing power. With HIV prevalence rates highest in regions with the highest population dependent on rain-fed agriculture, as well as in regions with high urban populations, its effects on family productivity are clearly an emerging issue. The highest prevalence of HIV/AIDS is also among the most economically productive age groups.

Namibian women are largely responsible for food production and processing in communal areas. Therefore, food security can be enhanced by measures that improve their income-earning potential, as well as their decision-making authority in the community and over land resources. Subsistence farming is the main source of income for virtually all poor households. The regions where most households rely on subsistence farming as their main source of income are Omusati (80%), Ohangwena (58%), Oshikoto (50%), Oshana (48%) and Kavango (34%). The capacity of women to own and manage land over the long term is important to food security. Thus the low status and low income of women is a key underlying cause of food insecurity in Namibia.

Relative and extreme poverty are defined as households spending 60% and 80%, respectively, of their total incomes on food. A total of 28% of households in Namibia live in relative poverty and 4% in extreme poverty but this is not evenly distributed. The regions with the highest percentage of poor households are Kavango

⁸ Regrettably the Ministry of Health and Social Services indicated that sex disaggregated data on HIV/AIDS prevalence based on VCT figures are incomplete and unrepresentative.

⁹ World Health Organization. 2003b. *Protocols for the medical management of persons who experienced sexual violence*. Geneva: WHO.

¹⁰ MoHSS NDHS 2002

¹¹ LAC Rape in Namibia: An Assessment of the Operation of the Combating of Rape Act 8 of 2000 LAC 2006

(50.4%), Oshikoto and Omusati (47%), Caprivi (44%), Omaheke (40.4%) and Kunene (36.9%). Omaheke and Kunene regions have the highest percentage of extremely poor households - 12.4% and 11.2% respectively.

Among the most important gender-sensitive poverty indicators used in many situations is the comparison of incidence of income or consumption poverty among female-headed and male-headed households. Female headed households account for 41% of all Namibian households and income per capita in these households is 40% lower than male headed households. Most of the poor households are relatively large and contain orphans.¹²

Female -headed households are differentially represented across Namibian regions. Figures show that Ohangwena (52.7%), Oshana (50.3%), and Omusati (50.4%) have more FHHs than MHHS. There is also a high representation of FHHs in Caprivi (49%), Kunene (45.8%) and Oshikoto (48.9%). Female-headed households are also over-represented among the poor. The regions with the worst consumption poverty among female-headed households include Kavango (N\$2,746), Ohangwena (N\$3,244), Oshikoto (N\$4,057), Omusati (N\$4,061), Kunene (N\$5,059) and Caprivi (N\$5,073). The underlying factors to low disposable incomes include¹³:

- High dependency on subsistence farming of low economic value, as the main source of income for 42% of the population.
- Lack of wage employment.
- Lack of access to credit and financial services, which can support new and expanding business and empower Namibians to manage income and finances. An estimated 40% of Namibians (almost 80% in rural areas) have no access to banking or insurance services.¹⁴
- Inadequate support and services to expand the Small or Medium Enterprise (SME) sector, which is estimated to account for 11% of total GDP and almost 20% of the labour force.¹⁵

Nevertheless, over 20,000 people, mostly women, are known to contribute their time to voluntary activities at a community level, in addition to their other responsibilities. These volunteer activities include home based care, overseeing OVC and community level committees and group.¹⁶ Anecdotally, many of these women are criticized by other family members as volunteer work is not bringing 'food' home to the table.

Strategies

Background / Context

This Joint Programme strives to focus the collective efforts of the UN System in Namibia, through the UNDAF, to promote gender equality and empower women in Namibia. It is built on, and linked to foundational, gender-focussed efforts of the Namibian Government. From the global framework of the Millennium Declaration, Namibian national targets and indicators have been developed to ensure that the MDGs are firmly rooted in Vision 2030 (the overarching development framework for Namibia) and in the National Development Plan 3 (NDP3) for 2008 – 2012, now in final draft format. In addition, the National Poverty Reduction Action Plan intends to balance the need for redistribution of existing productive resources with the need for accelerated economic growth, biased towards the poorest groups (including women). Pro-poor economic strategies target the poorest with investments in labour intensive sectors, such as agriculture or manufacture. It also targets areas where the poor live in rural areas and urban settlements, and more fundamentally must be designed and implemented by the poorest groups themselves.¹⁷

The Government of Namibia has shown it has a political and moral commitment to the goal of gender equality, by passing a number of key legal and policy provisions which serve to provide a supportive environment for gender based interventions. Snapshots of these Acts are provided in the following textbox.

Combating of Rape Act No. 8 of 2000: is aimed at combating rape by prescribing stricter minimum sentences for rape and abolishing the rule that a boy under the age of fourteen years was incapable of sexual intercourse. It also modified certain rules of evidence and imposes special duties on prosecutors and police in criminal proceedings relating to sexual offences. According to Hubbard (2007), this law introduced the issue of marital rape and brought about a broad gender neutral definition of rape. It moved the focus from consent of the victim to force or coercion by the perpetrator and is thus seen as a major instrument in combating gender based violence in Namibia.

Married Persons Equality Act 1 of 1996 was among the first of post independence laws specifically aimed at women's upliftment. It eliminated the concept of marital power (Hubbard, 2007) that defined women in civil marriages as minors without rights to administer property. With this law wives and husbands were subjected to similar restraints and power with regards to property. Wives like husbands can enter contractual obligations without asking their spouses.

Combating of Domestic Violence Act No. 4 of 2003 covers such things as physical abuse, sexual abuse, economic abuse, intimidation, harassment, trespassing; emotional, verbal or psychological abuse; and psychological abuse of a children. Its coverage includes those in marriage, living together as husband and wife, having a child or children together, parents and their children family members and boyfriends and their girlfriends. This law gives victims of domestic violence avenues for protection, laying charges and for privacy.

Maintenance Act 9 of 2003 – is meant to provide for the payment of maintenance, holding of maintenance enquiries and enforcement of maintenance orders, to achieve some financial security for children under single parent care. Roughly 41% of Namibian households are headed by females and Namibia experiences a significant problem in ensuring fathers support their out of wedlock children.

Affirmative Action (Employment) Act 29 of 1998 aims at redressing inequalities in employment, bringing about equal opportunity in employment in accordance with Article 10 and Article 23 of the constitution. It is a set of measures and procedures for eliminating discrimination arising from past discriminatory laws and practices. Among the designated groups of persons to benefit from the Affirmative Action law are women. The Affirmative Action Plan is, in part aimed at achieving gender balance in decision-making.

¹⁷ UN Namibia, Common Country Assessment 2004 Windhoek.

PHK

Two other laws important to gender equality in Namibia include the *Communal Land Act 5 of 2002* that gives women the right to inherit land from their husbands in rural areas and the *Labour Act* that provides for paid maternity leave. All of these laws rest on the Namibian Constitution, Article 10 (23) that ensures gender equality before the law.

Despite the legal framework in place and described here, there is a lot of work still to be done to realize intended benefits. The challenge facing the Government, the Administration, the people of Namibia – and this Joint Programme - is putting these noble laws into practice.

Lessons Learned

A number of past programmes (see adjacent text box) are providing important intelligence for this proposal. Lessons learned inform the rationale for this joint programme and have been incorporated into the specific design of interventions. The five UN agencies bring their respective technical expertise and collective local knowledge as critical comparative advantages for success in the proposed joint programme.

The proposed joint programme will **focus at both national and regional levels**, with the full ownership resting with the Government of the Republic Namibia. Experience has demonstrated the need to work on behaviour shifts from this multi pronged approach, engaging national and local stakeholders and communities as true partners in the design and implementation of the programme.

While Namibia has a strong enabling environment (of legislation) it is generally acknowledged that the **key challenge is mainstreaming and enforcement**. Therefore, the joint programme is aimed at moving 'words into action'. Experience has shown that the UN has a strategic advantage in reaching key duty bearers such as Cabinet Ministers, parliamentarians, traditional authorities, the judiciary, senior managers and other influential citizens, who are essential partners in promoting gender-based and rights-based laws and policies.

1. Advocacy to parliament for increased resource allocation for services that benefit women and girls
2. Sensitising parliamentarians on gender based violence and its links to reproductive health, HIV and AIDS and poverty through information sessions and field visits
3. Facilitation of a Knowledge, Attitude, and Practice (KAP) study on gender based violence and HIV & AIDS
4. National awareness building interventions, 16 days of Activism, International Women's Day
5. Establishment and strengthening of Women and Child Protection Units;
6. Establishment and strengthening of the National Data Base on Gender Base Violence
7. Life-skills, Adolescent-friendly services and enhancing participation and awareness on rights

The Ministry of Gender Equality and Child Welfare (MGE CW) has the mandate and responsibility to ensure gender equality. MGE CW adopted a gender policy in 1997 and developed a strategy of gender mainstreaming in all public and private sector programmes, which recognizes that **appropriate gender responses need to go beyond awareness and be staff and beneficiary community centred**. However, MGE CW has faced many challenges, not the least of which is inadequate resources to implement a full-fledged gender mainstreaming strategy. The National Gender Policy now needs to be reviewed (to reflect a changing environment and emerging issues such as HIV and AIDS) and there is a need for tools and training to operationalise a mainstreaming strategy, and realize gender responsive planning, programmes and budgeting.

PLW

This joint programme proposal recognizes that **gender based violence is both a cause and a consequence of HIV prevalence among women**. Gender inequality is partly manifested in violence against women and GBV carries the threat of HIV/AIDS. Regrettably, discrimination against people living with HIV/AIDS and a fear of violence prevents many Namibian women from receiving counseling and treatment. This joint programme addresses the interrelationship between HIV and GBV, by focusing not only on women and girls, but also involving men and boys. Implementing partners have identified specific capacity gaps in services (related to prevention, detection, enforcement and treatment) which are built into the design of this programme.

Past programmes have taught Partners that **sustainable improvement to food security and incomes for women and girls needs to be carefully targeted interventions at the local level**. The FAO has partnered with the Ministry of Agriculture and Forestry (MAWF) and with community based organisations in Caprivi and Ohangwena, working along side MAWF Agricultural Extension Officers, NGO staff and community facilitators to pass on skills for sustainability. New initiatives in this joint programme will be based on a thorough review of the regionally based, Participatory Poverty Assessments and specific needs assessments at community level to ensure technical inputs match specific, targeted community needs.

In this same vein, the joint programme will carefully target its efforts to focus on 7 (of the 13) Regions in Namibia - Kavango, Ohangwena, Omaheke, Karas, Caprivi, Omusati, and Kunene. Selection of the regions was based on proportion of female headed households, female headed households in poverty, HIV/AIDS, gender based violence and the proportion of girl school dropouts (where data was available). Two of the above seven regions (Omaheke and Karas) were selected for reasons of political governance, including representation from the southern and eastern parts of the country.

The Proposed Joint Programme

The proposed joint programme is comprehensive and multi faceted. It seeks to reach a broad audience of beneficiaries, collaborators and partners, sweeping across macro (national), meso (regional) and micro (community) levels of Namibian society. Gender equality, itself a cross cutting issue, requires such an ambitious agenda. The proposed joint programme architecture consists of three streams or clusters of activities.

In the first cluster there are activities or interventions which, at heart, are all about services. These activities seek to increase services – qualitatively and quantitatively, as well as enhance the extent to which these services are being used by women and girls. To accomplish this, the joint programme directs energy to increasing levels of **awareness and understanding** on the part of leaders (national, regional and traditional), media (national and community-based) and the Namibian population about gender equality, including the root cause and resulting problems described in this proposal. Leaders are targeted to bridge identified gaps between national representation and the regions / communities, as well as highlight the need for leadership (at all levels) to be conduits of change in rectifying gender inequities. The media is targeted to begin to change the national discourse on gender issues and heighten the sensitivity of these key and very influential players. National campaigns will bring gender related issues to the forefront, open dialogue about the resulting problems amongst both genders of the Namibian population.

Service providers are also targeted in this first stream. Activities include **enhancements to Women and Child Protections Units (WCPU - multi disciplinary legal, counseling and medical service providers) and services**

PKR

provided by health professionals, law enforcement personnel and community-based support systems/groups. These activities build on the work and successes of past programmes (such as the WCPUs), as well as augment activities where service gaps have been identified (establishing Help lines and women and child friendly facilities).

Of course, special attention is given to **women and girls** in this cluster of activities, so they may **better understand and assert their rights**, as well as seek and receive services to prevent and mitigate identified problems. While some activities are of a national nature, community based outreach will be undertaken in a participatory fashion, capitalizing on existing community groups and networks and groups. Of note, the most disadvantaged community, San females are the focus of special activities, commensurate with their acute needs. In addition, HIV/AIDS is a critical issue for Namibians and while it will be integrated throughout the activities undertaken in this stream, a special focus on this issue has been articulated within the programme's design.

The first stream, lead by UNDP and UNICEF, includes activities which are designed to produce the following results (outcome and outputs) at the joint programme level.

Joint Programme Outcome 1: Increased awareness and capacity for protecting the rights of women and girls (including reproductive rights).	
JP Output 1.1	The rights of women and girls are protected nationally through enactment and enforcement of existing legislation
JP Output 1.2	Women and girls are aware, understand and assert their rights (including reproductive rights) and know how to access available services such as prevention and treatment of HIV and AIDS
JP Output 1.3	Improved capacity of service providers (including judiciary, law enforcement personnel, health service providers, social workers, teachers and community leaders) to prevent, detect, enforce and report gender based violence and abuse, and to offer reproductive health services, protection and security for women and girls
JP Output 1.4	Strengthened national response on access to and availability of prevention and treatment services for HIV/AIDS among women and girls

The second stream, lead by UNFPA, is really all about realizing and sustaining change related to gender issues within the Government of Namibia, through **mainstreaming**. Once again, a multi faceted approach is proposed. The MGEW is the key actor for gender mainstreaming and work will be done with them on a new National Gender Policy and Plan of Action, combined with strengthening the machinery (across government) which operationalizes gender strategies. There is a need to not only heighten awareness of gender issues, but to provide specific competencies which allow for gender sensitive planning, programme design and budgeting across government ministries / sectors.

Training key personnel in financial, policy, planning and senior management positions will start the process. This will be augmented with the development and implementation of processes and mechanism to monitor the application / implementation of the strengthened gender policy and strategies. In addition, key frameworks and policies, including 4 KRAs from NDP3 will be assessed. This will supplement the targeted mainstreaming in 4 ministries; Ministry of Education (MoE), Ministry of Health (MoHSS), Ministry of Agriculture (MAWF) and Ministry of Labour (MoLSW).

PHR

This proposal has identified numerous gaps in data and information concerning the extent and magnitude of identified problems. For example, there is a lack of current HIV/AIDS data, disaggregated by sex. While a baseline study at the outset of the programme is planned, this stream of work will also include activities to improve the availability and validity of data, notably on GBV, provided from the regions and linked to national data systems.

This cluster of activities is designed to achieve the following:

Joint Programme Outcome 2: Increased mainstreaming / integration of gender in national development policies and frameworks; and implementation of gender responsive KRA policies, programmes and budgeting.

JP Output 2.1 Gender is institutionalized and mainstreamed in 4 Key Results Areas (KRA) of the National Development Plan III

JP Output 2.2 Enhanced human and institutional capacity to lead gender mainstreaming

JP Output 2.3 Improved management of GBV sex-disaggregated data, linked with the national data system

Finally, the third stream of activities deals, in part, with the *economics of the gender problems* at the community and individual levels. Led by FAO, activities will be undertaken to improve agricultural practices and the diversification of income sources. As highlighted in the lessons learned, it is understood that *sustainable improvements* to food security and incomes for women and girls needs to be carefully targeted at the local level. Therefore, the third cluster of activities starts with needs assessments and small scale market /feasibility studies to identify the most appropriate interventions. Technical support, agricultural inputs, new technologies and training are all planned within this cluster of activities. FAO and partners will benefit from experience to date in Khomas, Kavango and Ohangwena Regions. Again, special attention has been paid to San women and girls, taking their circumstances and special needs into account.

Joint Programme Outcome 3: Enhanced well-being of targeted women and girls through food security and livelihood improvement initiatives.

JP Output 3.1 Food availability, access and utilization improved through appropriate agricultural practices

JP Output 3.2 Increased incomes through diversified economic activities

Overall it is recognized that there are some gaps in the *specificity* of some activities throughout this proposal. These are intentional and unavoidable. A number of needs assessments and community level conversations are planned (notably in the first and third streams of activities) to ensure design of new projects and interventions meet current and local needs. The results described above are admittedly ambitious, particularly for a programme which strives to shift well entrenched cultural norms and has a three year life span. For these reasons, the management, including ongoing monitoring, of the joint programme is critically important (and discussed in detail later in this proposal).

The UN Agency partners (FAO, UNDP, UNESCO, UNFPA and UNICEF) have been working alongside relevant civil society and government counterparts in Namibia on a range of programmes and have well established relationships. Specialist inputs may be provided by the WFP, UN Habitat and the ILO, as required during implementation.

3/11/2

Key Government partners (some of whom have played an important role the development of the programme) include: the Parliament, Office of the President, Office of the Prime Minister, National Planning Commission Secretariat (NPCS), Ministry of Gender Equality and Child Welfare (MGEWCW); Ministry of Agriculture, Water and Forestry (MAWF); Ministry of Education (MoE), Ministry of Youth, National Service, Sport and Culture (MYNSSC), Ministry of Justice (MoJ), Ministry of Trade and Industry (MTI), Ministry of Finance (MoF), Ministry of Health and Social Services (MoHSS), Ministry of Information and Broadcasting (MIB), and the Ministry of Regional Local Government, Housing, Rural Development (MRLGHRD).

Implementing partners in civil society will include NGOs working on advocacy such as the Legal Assistance Centre, community organisations such as Women Action for Development and faith based organisations (FBO) such as Church Alliance for Orphans and SME development organizations such as the Joint Consultative Committee. Private sector partners will include UNAM, Polytechnic and exemplary businesses that will vanguard gender mainstreaming and financial institutions that will support SME development.

Results Framework

Summary of Results Framework

Joint programme results have been articulated in the three outcomes and nine outputs described above. This results framework section now moves to a lower level of detail in designing and planning the joint programme. Results are specified as specific, measurable, achievable, realistic and time-bound (SMART) outputs and aligned with specific proposed activities. This provides a more operational view of the joint programme, including timing and costing by Agency.

Table 1 is organized around the three desired outcomes for the joint programme (including their respective links to national plans / priorities) and identifies key indicators which will be used to measure progress towards and realization of the joint programme outputs. Baseline information is not strong at present and will be augmented with a baseline study at the start of the programme. The joint programme will seek to build a *baseline story*, drawing together qualitative and quantitative information on the current situation, relative to the desired outcomes. To this end, the indicators in Table 1, as well as those specified later in this proposal in the Monitoring and Evaluation Framework (Table 2) will be used as starting point for the baseline study.

SMART outputs for each activity are provided in Table 1 and accompanied by a planned budget (costed over the three years). The Results Framework, Table 1 lays the foundation for both implementation and ongoing monitoring of this proposed joint programme. It also serves to define the Agencies involved in delivering different aspects of the joint programme and the collaboration envisioned in realizing the three outcomes.

Joint programme outcome 1 involves work from UNDP, UNICEF, UNESCO and UNFPA. Important information will be gleaned from key studies and assessments (KAP study, baseline study on Human Trafficking, and assessment of community protection facilities, consultations on a National Action Plan on GBV and Community Capacity Enhancement conversations) and shared across programme partners to inform the development and delivery of interventions.

PH2 

Namibia Joint Programme: Setting things right- towards gender equality and equity – October 14, 2008

Joint programme outcome 2 is pursued by UNDP, UNICEF and UNFPA, with close affiliation with the MGECW. Existing materials and ongoing initiatives feed the activities planned, including the gender analysis studies of sub sector policies, revisions to the National Gender Policy and development of a National Gender Plan of action.

Joint programme outcome 3 includes activities by UNDP, UNICEF and UNESCO, all lead by FAO. The CCE conversations in outcome 1 are important vehicles for information to identify needs and appropriate interventions, and are supplemented with market studies. Activities here are envisioned to be incremental, involving 4 targeted communities / groups to test and refine interventions. The activities build on a wealth of experience (knowledge and competencies) with food security and livelihood projects in Namibia, as well as on tools used in other jurisdictions, with adaptation to the Namibian context. Four targeted community-based groups are designed as a well focused starting point, from which numbers/beneficiaries can grow as time move on.

The joint programme has been designed to build on existing expertise and available materials, to maximize efficiency. There has also been a great deal of attention paid to the integration of activities and cross-agency collaboration.

Annual Reviews

The implementing Partners / Agencies shall jointly conduct annual planning and review meetings for the programme overall, guided by the results framework, monitoring and evaluation framework and work plans for this programme. Annual reviews will also include an assessment of the risks and assumptions specified in this proposal, to determine their effect, adequacy and mitigation strategy adjustments that might be required as the environment evolves. A new work plan and budget will be produced annually, based on programme progress and will be approved in writing by the MDG-F National Steering Committee (NSC). Any substantive change in the joint programme scope will require revision of the Joint Programme Document and any amendments will need to be signed by all parties concerned, with approval by the NSC.

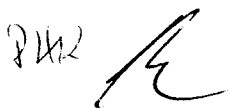

A handwritten signature in black ink, consisting of a series of loops and a long horizontal stroke extending to the right.

Table 1: Results Framework - OUTCOME 1

JOINT PROGRAMME OUTCOME 1: Increased awareness and capacity for protecting the rights of women and girls (including reproductive rights)
NATIONAL PRIORITIES: Gender equality (NDP3); Promote gender equality and empower women (MDG 3)
UNDAF OUTCOME 1: By 2010, the HIV/AIDS response is strengthened through increased access to prevention, treatment, care and impact mitigation services, especially for vulnerable groups and UNDAF **OUTCOME 3:** By 2010, the Capacity to deliver essential services is strengthened

TABLE 1: OUTCOME 1

Work Plan and Budget

A work plan and budget is provided in Annex A (page 56.) Here targets have been specified for activities, with particular focus on year one activities. It is expected activities in years 2 and 3 will require adjustments as the programme gets up and running in the first year. Additionally, some needs assessment work conducted at the outset of the programme will bring greater clarity to the nature and extent of proposed new projects (notably related to outcomes 1 and 3). The Implementing Partners / Agencies for each activity are detailed in the Work Plan, but some flexibility will be required, particularly with civil society organisations, as they are more dynamic and subject to changing capacity and mandates.

The overall budget for this joint programme is allocated across the 5 Agencies, by outcome as follows:

JOINT PROGRAMME COSTS BY OUTCOME (including 7% AOS)	PLANNED BUDGET BY OUTCOME			
	OUTCOME 1	OUTCOME 2	OUTCOME 3	Total
UNDP ACTIVITIES	1,261,413	291,575	328,490	1,881,478

PKR

Management and Coordination Arrangements

The UNCT in Namibia has worked together to develop the UNDAF, with this year being the third year of the current UNDAF cycle (2006-2010). This joint programme proposal is based on the Common Country Assessment and the UNDAF. The UN System will undertake an integrated programming process at the country level under the auspices of the Resident Coordinator's office.

The programme will expand and enhance coherence, impact and collaboration amongst ongoing United Nations activities supporting the Government of Namibia. Each UN agency has had successful experience in joint programming with at least one other UN agency, in partnership with government and civil society organisations and they are confident of their ability to work together in this joint programme.

UNDP, UNFPA, UNICEF, UNESCO and FAO will collaborate in the implementation, monitoring and reporting on this programme. It is recognized that each Agency has its own reporting obligations (Country Programme Documents (CPDs), Country Programme Action Plans (CPAPs) and Annual Work Plans (AWPs), and requirements under this joint programme must maximize synergies and minimize (to the extent possible) duplicative and time consuming reporting activities.

Accountability - The MDG-F National Steering Committee

The MDG-F National Steering Committee will have overall responsibility for Programme activities. Its role is to provide oversight and strategic guidance to the programme. It will provide strategic guidance and oversight and approve the Programme Document including subsequent revisions, Annual Work Plans and Budgets.

The NSC will be co-chaired by the UN Resident Coordinator and the Director General of the National Planning Commission Secretariat or his/her representative. Membership of the NSC will also include a representative from the Spanish Embassy. At the first meeting of the NSC it was decided to co-opt line ministry representatives for the sector window approved. The Minister of Gender Equality and Child Welfare was co-opted since she performs oversight functions on gender issues for government. The NSC will normally meet semi-annually and will make decisions by consensus. Decisions on programme documents, including revisions and Annual Work plans and budgets will only be taken upon completion of a review by the Programme Management Committee.

To the extent possible, the NSC will use existing coordination mechanisms in Namibia to undertake the process of planning and stakeholder consultation that the programme operations will require. The NSC will normally meet semi-annually. Additional meetings based on the requirements of the Programme may be convened exceptionally. The meetings will be convened by the Chairperson. For emergency issues the NSC may conduct its business electronically.

The responsibilities of the NSC will include to:

- a. Review and adopt Terms of Reference (TOR) and Rules of Procedure of the NSC, and/or amend them, as necessary, in consultation with the Administrative Agent.

PHK

- b. Approve the Joint Programme Document before submission to the Fund Steering Committee.
- c. Review and endorse the Programme Document and overall Annual Work Plans and Budgets submitted by Participating UN Organisations; ensure their conformity with the requirements of the Fund and in particular decisions of the MDG-F Steering Committee; ensure the quality of programme documents to receive funding from the Fund.
- d. Approve the strategic direction for the implementation of the Joint programme within the operational framework authorized by the MDG-F Steering Committee.
- e. Discuss the Programme requirements and priorities concerning, inter alia:
 - programme management, including consistent and common approaches to project costing, cost recovery, implementation modalities, results-based reporting and impact assessment,
 - Information management, including appropriate Fund and donor visibility.
- f. Ensure that appropriate consultative processes take place with key stakeholders at the country level in order to avoid duplication or overlap between the Fund and other funding mechanisms.
- g. Approve the reporting mechanism for the programme.
- h. Suggest corrective action to emerging strategic and implementation problems.
- i. Create synergies and seek agreement on similar programmes and projects by other donors.
- j. Approve the communication and public information plans prepared by the PMC.

Coordination – The Programme Management Committee

The NSC shall ensure that Programme Management Committee (PMC) is established to assume responsibility for the operational implementation and coordination of the Joint Programme. The Resident Coordinator will appoint a Chair for the PMC and work closely with the PMC to facilitate the UN Agency coordination and integration envisioned in this proposal. The PMC's membership will consist of relevant implementing parties, including participating UN Agencies, Government representatives and civil society representatives as appropriate. The PMC will be managed at two levels. These are as follows; (1) the **Strategic Coordination** (involving the Permanent Secretaries of Line Ministries, UN Heads of Agencies and CSO Directors); and (2) the **Technical Coordination** component (the technical experts from the UN, and Government line Ministries and relevant CSO representatives. Modalities and specific Terms of Reference for the PMC will agreed later.

(1). PMC- Strategic Coordination:

- a. Ensures overall operational coordination
- b. Approve of Annual Work Plans
- c. Provide guidance to UN agencies and line Ministries technical experts to ensure joint compliance with 70% performance and delivery thresholds annually.
- d. Period liaison with the NSC to review findings of the summary audit reports consolidated by the Administrative Agent; highlight lessons learned and periodically discuss follow-up by Participating UN Organisations on recommended actions with Programme -wide impact.
- e. Advise the NSC on policy matters related to the Gender Joint Programme
- f. Ensure that the joint programme is on track and promised results are being delivered.

PHR

(2). PMC -Technical Coordination:

- a. Establishes a programme management Unit, with a Programme Manager (or equivalent) Monitoring and Evaluation Experts operating out of the National Planning Commission of the Government of Namibia, with dual reporting to the Chair of PMC
- b. Manages programme resources to achieve the outcomes and output defined in the programme;
- c. Aligns MDG-F funded activities with the UN Strategic Framework or UNDAF approved strategic priorities;
- d. Establishes programme baselines to enable sound monitoring and evaluation;
- e. Establishes adequate reporting mechanisms in the programme;
- f. Integrates work plans, budgets, reports and other programme related documents; and ensures that budget overlaps or gaps are addressed;
- g. Provides technical and substantive leadership regarding the activities envisaged in the Annual Work Plan and provides technical advice to the NSC;
- h. Establishes a communication and public information plans;
- i. Makes recommendations on re-allocations and budget revisions to the NSC;
- j. Addresses emerging management and implementation problems; and
- k. Identifies emerging lessons learned.

Representatives from the five participating UN Agencies (when not designated at the Head of Agency) will also be expected to keep their respective UN Heads of Agencies apprised of progress on the Gender Joint Programme, through existing / established reporting mechanisms. Heads of Agencies will also use their representative on this PMC as their conduit into the joint programme.

The PMC will normally meet quarterly, although start up activities will require more frequent meetings in the initial stages to ensure coordination and information sharing. Experts and technical specialist (notably project managers and field personnel) can be invited to PMC meetings to report on and discuss the progress of the programme, including emerging challenges and proposed shifts in the programme design). The Spanish Embassy will be invited to provide a representative, as an observer at PMC meetings.

The PMC provides a mechanism for both coordination of discrete programme activities and oversight of the programme at an operational level. However it is recognized that the breadth of the proposed programme will also necessitate ad hoc meetings (and potentially ad hoc sub committees) amongst different clusters of technical specialist as they proceed with implementing their respective and sometimes joint interventions. These are envisioned to be more fluid 'structures' undertaken, as required as part of the project implementation process with impacted implementing partners (but generally not involving all programme implementing partners, as is the case with PMC). For example, as related to outcome 2, UNDP, UNICEF and UNFPA may see the need at a technical expert level to convene an ad hoc subcommittee, which need not involve UNESCO or FAO, but may include the implementing partners within the Namibian Government and CSOs. However, true oversight, operationally rests with PMC.

Both the NSC and the PMC will seek to integrate their work under the UNDAF thematic structures already in place in the country. The two committees may wish to organize occasional joint meetings to enhance communication between the oversight and operational coordination functions.

The Programme Management Unit

The proposed programme is very comprehensive, involving multiple players and approaches. To ensure the integration of the various activities into meaningful assessment of progress and results, a small project team will be established, under the leadership of a program manager. This group is expected to include competencies for coordination, organization, analysis, collaboration and communication. They will report to the Chair of the PMC, and provide a secretariat support for NSC.

The team is expected to provide quick start up assistance in coordinating the baseline study, identifying key elements for ongoing reporting, receiving and aggregating monitoring information and data on common activities, developing a means of tracking programme beneficiaries (to allow meaningful evaluation of impact at the conclusion of the program) and serve a central repository for and developer of common information and data needs. The targets identified in the Work Plan and Budget, Annex A provide a good starting point for this work.

Administrative Agent

The Administrative Agent (AA) function rests with the Multi Donor Trust Fund (MDTF) Office at UNDP headquarters in New York. The MDTF Office as AA will be responsible for:

- a. Disbursing approved resources to the Participating UN Organisations
- b. Consolidating the joint programme narrative report with financial reports from Participating UN Organisations; including analysis of financial and narrative data; and provide it to the NSC.
- c. Providing the Consolidated JP Progress reports, and other reports as appropriate to the donor, i.e. the Fund Steering Committee through the Secretariat.
- d. Streamlining the reporting systems and harmonizing reporting formats based on joint programming best practices.
- e. Facilitate the work of the Participating UN Organisations to ensure adherence to a results based reporting structure around outcomes and outputs.
- f. Ensuring that fiduciary fund management requirements are adhered to.

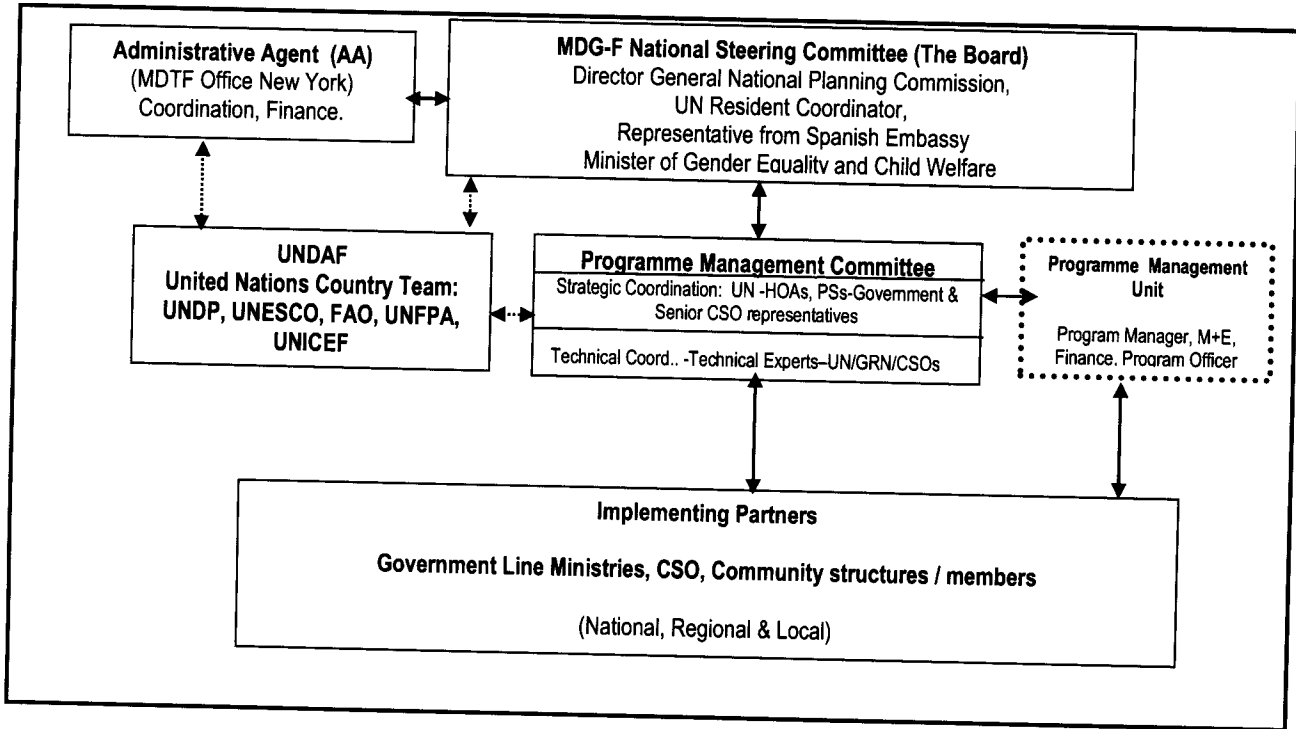

The Resident Coordinator

The RC's role is to facilitate collaboration between Participating UN Organizations to ensure that the programme is on track and that promised results are being delivered. He or she will also be the main interface between the Secretariat and the MDTF Office on one hand and the UNCT on the other. The Resident Coordinator will exercise his/her authority over the programme by being entrusted with leadership of the overall programme design, ongoing programmatic oversight of the Fund's activities by co-chairing the National Steering Committee meetings.

PHK 

The following diagram (figure 1) reflects the coordination, implementation and management modalities for the proposed Joint Gender Programme in Namibia.

Figure 1: Organogram of the Gender Joint Programme

Cash transfer modalities

The cash transfer modality options for the UNDG Excom agencies (UNDP, UNICEF and UNFPA) are either direct cash transfers to Government (e.g. national execution advances), reimbursement, UN agency implementation, or where an UN agency pays on behalf of Government upon receipt of payment request from Government. The current cash transfer modalities which prevail for the respective UNDG Excom UN agencies will hold until such time that a more uniform cash transfer approach is suggested for all Excom Agencies in Namibia under the Harmonized Approach to Cash Transfers (HACT). Discussions between the United Nations Country Team (UNCT) and the Government of Namibia are ongoing concerning HACT, following the conclusion of the recently undertaken micro and macro assessment under HACT.

Currently, for the transfer of funds, UNFPA and their implementing partners sign a letter of understanding at the beginning of each programme cycle, which is usually over a five-year period. For disbursement of funds, implementing partners submit a certificate of expenditure (COE) to UNFPA on a 3-monthly basis. The COE reflects the funds received, spent and balances. In support of the above, annual audits are carried out for projects exceeding US\$500,000 within the five-year cycle.

PHK

Prior to issuance of funds by the approved programme, a Memorandum of Understanding is signed between UNDP and the implementing partner (Government or NGO), which is tied to the life-cycle of the approved programme (usually, five years). UNDP predominantly uses the direct payment cash transfer modality, whereby implementing partners provide a request letter to UNDP for payment, accompanied by three quotations. The direct payments are done based on interventions spelled out in the Annual Work Plans of each approved programme. In addition, UNDP also issues quarterly advances to implementing partners, following a request letter signed by the Permanent Secretary of a Government Ministry (or Executive Director in the case of a NGO), which is approved by the UNDP Resident Representative. In cases where cash is advanced to an implementing partner, some projects have opened project bank accounts where funds are kept after being deposited by UNDP. Usually, these project accounts are subject to annual audits, a UNDP financial requirement which holds for all nationally executed projects.

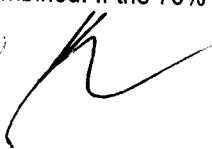

UNICEF uses the direct cash transfer modality to issue funds to Government and other partners. Such transfers follow after signing an annual work plan with the concerned partner based on agreed targets and results at the start of the calendar year which specifies the activities against the amounts to be funded. All partners are issued with payments linked to a financial request letter from either the Government (usually signed by the Permanent Secretary in the case of Government) or NGO (the Executive Director in the case of NGOs) which are made either through cheques or bank transfers. The financial request letter is checked against items contained in the annual work plan and adherence to Government financial and administrative procedures is ensured. New cash transfers are made for the next set of activities only when the previous amounts are accounted for and reported upon. No cash transfer is affected where there are unreported advances for over six months.

UNESCO and FAO are non-ExCom UN organisations and they have not adopted HACT. Their current cash transfer modalities will apply. FAO uses a Memorandum of Agreement to contract out specific services required for implementation. In the case of UNESCO, sometimes a Letter of Agreement (LOA) is in place where funds needed are released upfront. Other times, Government or NGO partners are contracted with a set of terms of references (on deliverables). This is usually given through two installments. The first financial installment is provided after signing of the contract, while the second installment is given following submission of the financial statement and the final report.

Fund Management Arrangements

Each participating UN Organization (PO) assumes complete programmatic and financial responsibility for the funds disbursed to it by the Administrative Agent (AA) and can decide on the execution process with its partners and counterparts following the organization's own applicable regulations.

Each PO establishes a separate ledger account for the receipt and administration of the funds disbursed to it by the AA. POs are requested to provide certified financial reporting according to the budget template provided in the MDG-F Operational Guidance Note issued by the MDTF Office and are entitled to deduct their indirect costs on contributions received not exceeding 7 percent of the Joint Programme budget in accordance with the provisions of the MDG-F MOU signed between the AA and the POs. Subsequent instalments will be released in accordance with Annual Work Plans approved by the NSC. The release of funds is subject to meeting a minimum commitment threshold (legally binding contracts signed including multi-year commitments which may be disbursed in future years) of 70% of the previous fund release to the POs combined. If the 70% threshold is not met for the programme as a whole, funds cannot be released to

PH2 

any organization, regardless of the individual organization's performance.

On the other hand, the following years advance can be requested at any point after the combined commitment against the current advance has exceeded 70% and the work plan requirements have been met. If the overall commitment of the programme reaches 70% before the end of the twelve-month period, the POs may after endorsement by the NSC request the MDT Office, through the RC to release the next instalment ahead of schedule. The RC will make the request to the MDTF Office on the NSC's behalf.

Any fund transfer is subject to submission of an approved Annual Work Plan and Budget to the MDTF Office.

Feasibility, Risk Management and Sustainability of Results

The goal of this Joint Programme proposal - *Setting things right towards gender equality and equity* – is enshrined in Namibia's constitution and a number of subsequent laws. Cabinet has given a directive to mainstream gender throughout government and has made gender equality one of the key issues to be addressed in the forthcoming National Development Plan (NDP3). The joint programme, linked with NDP3, will also move to bring a stronger gender focus in NDP4.

While all efforts will be made to follow financial procedures and risk management processes especially conforming to the government's risk management mechanisms, some factors such as slow rate of implementation and mismanagement of funds due to lack of adequate planning is likely to occur. Such events will be provided support through close monitoring and proactive technical support.

However, one of the biggest challenges faced will be ***changing attitudes and behaviour of men and women, boys and girls, and consequently model new positive social norms that address the low status of women in society***. The UN is held in special regard in Namibia and has long championed equal human rights for all and support to attain the Millennium Declaration and the Millennium Development Goals. The JP makes full use of the UN's comparative advantage in working with the leadership of the country and attacks entrenched norms from a variety of angles – nationally, regionally and at the community level. Nonetheless, three years is a short period of time for realizing measurable behavioural change.

Over recent years the rates of new infections of HIV/AIDS has levelled off and remain at a very high rate of 20%. With ART available in the district hospitals, the assumption is that ***human resource capacity will not fall below a critical level, within government, NGOs and at the community level to implement this programme***. Almost every household in Namibia is affected by HIV/AIDS. Many household have taken in relatives' orphans and women and girls are caring for the sick. There is high turnover of staff among UN Agencies and within partner organizations, which can result in discontinuity and delays. This is of notable risk as it may threaten the release of funds in year 2, if 70% of Year 1's funds are not spent by the joint programme.

Other, outcome-specific assumptions and risks are identified in the Monitoring and Evaluation Framework, provided later in Table 2.

On the positive side, the UN Agencies will continue to work through government and civil society organisations, thus building the capacity and self reliance of duty bearers throughout the JP's timeframe.

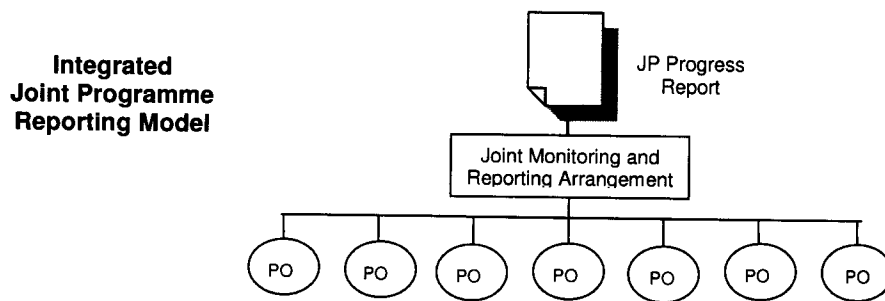

PHL

At community level, many of the programme's interventions build the skills and ownership of community volunteers, who have the motivation and commitment to bring positive changes within their community. These partners will help to ensure the sustainability of many of the joint programme's interventions. Outcome 2 focuses on ensuring there is institutional sustainability through mainstreaming gender in all the key ministries and creating systems and processes which will live beyond the life of this programme.

Accountability, Monitoring, Evaluation and Reporting

The Programme Management Committee is accountable to the National MDG-F Steering Committee to ensure all implementing partners follow the agreed Monitoring & Evaluation Framework (provided in Table 2). Within the first six months, programme baselines should be established to enable sound monitoring and evaluation. A monitoring system should track the Participating UN Organizations' individual contributions to the programme outputs, as developed and managed through the Programme Coordination Team.

The agreed monitoring and reporting mechanisms of the Participating UN Organisations should to the extent possible limit transaction costs through integration of the monitoring and reporting process while ensuring the best possible quality of Joint Programme Progress Reports.

Programme Monitoring and Evaluation Plan

A Programme Monitoring and Evaluation Framework are detailed in Table 2. JP outcomes and JP outputs are carried forward from the Results Framework in Table 1, as are their associated indicators. These are fairly high level indications of results achievement, and will provide guidance for the evaluations (mid term and final).

To facilitate more meaningful, day-to-day data and information collection, a series of lower level of indicators have been specified. These are more directly derived from the SMART outputs and linked to Agency interventions/activities. This is the information which can and will be collected throughout the implementation of the joint programme by programme implementers and then consolidated through the Programme Coordination Team.

There are, for example several similar activities under different outcomes – such as training, information sharing/communications, etc. By identifying common data elements, these activities can be measured

DHR

through common tools (like a generic training evaluation questionnaire) allowing for similar questions, rated on similar scales. This is just one example. The Programme Coordination Team will look for other opportunities to monitor like functions in a manner that allows for joint reporting, and provide the support required to facilitate this.

Table 2 also identifies the means of verification and information collection methods. Here again, economies can be realized through coordinated efforts. For example, a number of activities are identified as requiring field visits as part of the monitoring process. Information collected during any one visit can contribute to several interventions (and their associated programme implementer) if coordinated in timing, sequencing and locations.

The PMC and Programme Coordination Team, wherever possible will use and draw from existing data collection and monitoring systems of implementing partners. In addition, UN Agency monitoring instruments will be used where appropriate. The Lead Agency for each activity will provide data to the Lead Agency for each Outcome. Monitoring is an ongoing function conducted by programme managers / implementers. The information should be a continuous flow, which informs quarterly reporting by PMC. The programme Coordination Team is envisioned to support PMC in this regard.

An annual review will be conducted jointly with implementing partners, under the coordination of the NPCSS and will result in a single report, thus reducing transaction costs. An analysis of the sustainability of the project, as well as recommendations on how to proceed, will be included.

A mid term evaluation will take place, in accordance with the MDG-F guidelines. This is expected to occur in at the end of year one, involve roughly 4 months of elapsed time and be completed (at latest) by the mid point of year two. Results from the mid term evaluation will inform work for the balance of the joint programme. However, it will be a formative evaluation and as such will provide valuable information on the implementation, its process and progress. Early results, such as are available will be assessed and provide a good benchmark for what can be expected from the joint programme at the end of year three.

The Joint Programme may also benefit from the UNDAF evaluation, which will be conducted in 2009 the penultimate year of the UNDAF programme cycle. A final external evaluation will be carried out at the end the third year of the implementation period.

Reporting Arrangements

Quarterly reporting on programme progress is to be done by PMC, with support from the Programme Coordination Team. These reports are reviewed by PMC in its quarterly meetings, allowing for joint ongoing monitoring of the programme and decisions on ongoing implementation issues at an operational level.

On an annual basis, UN Agencies are required to provide narrative reports on results achieved, lessons learned and the contributions made to the Joint Programme. The reporting mechanism will be anchored in the Results Framework, Table 1 and the Monitoring and Evaluation Framework in Table 2. UN Agencies will channel their report contributions directly into an integrated reporting system which will be devised by the MDTF New York. The Annual Programme Progress report will consist of three parts:

PHK

Namibia Joint Programme: Setting things right- towards gender equality and equity – October 14, 2008

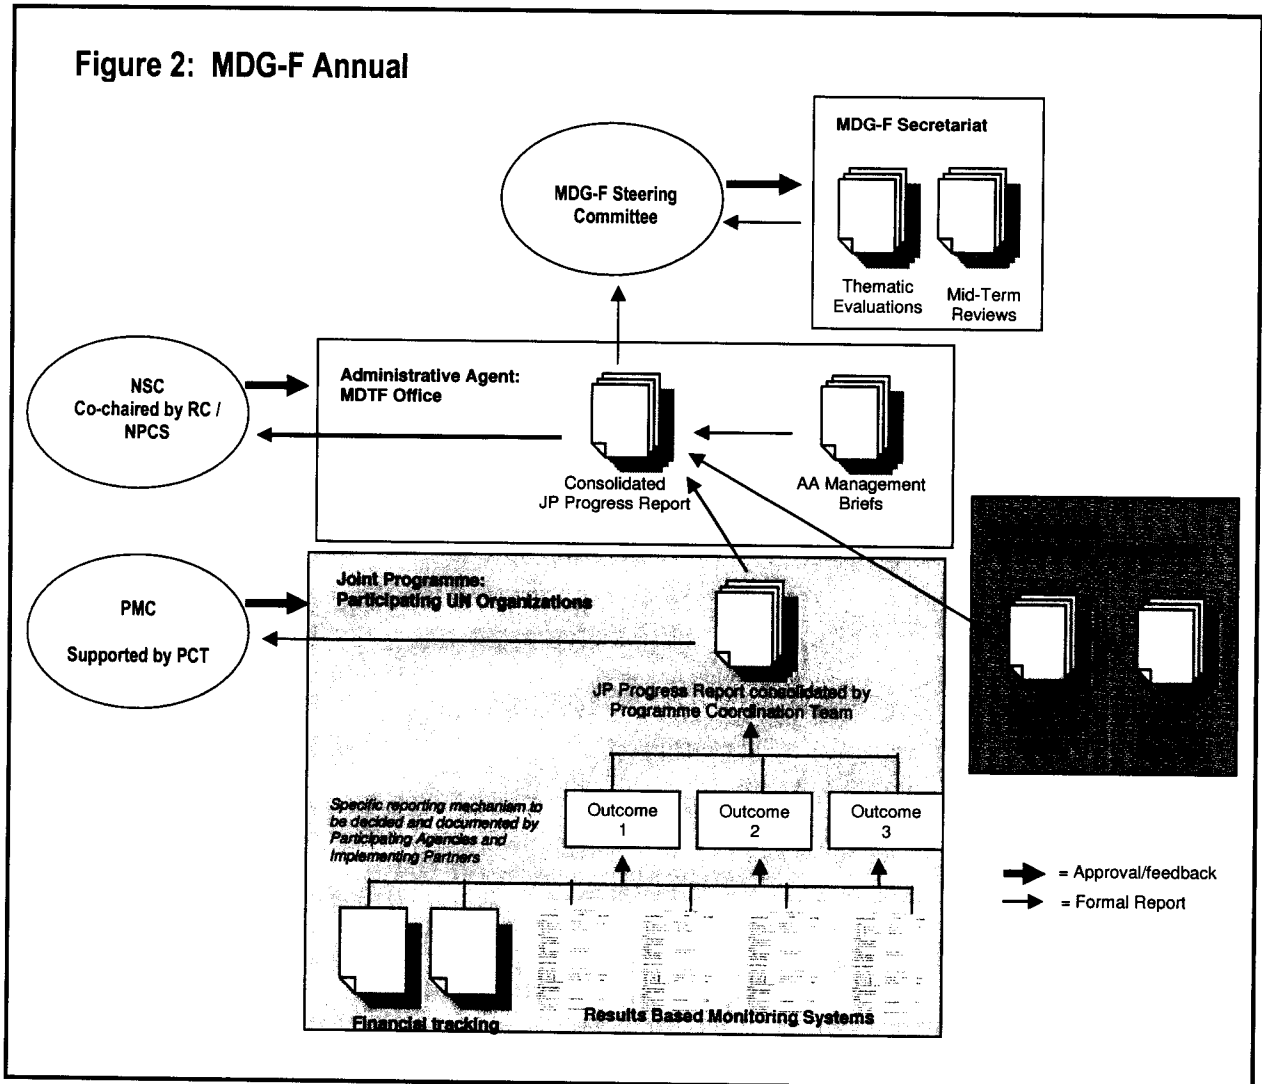

- a. AA Management Brief – Analysis of financial, narrative report, key management and administrative issues to be considered by the National MDG-F Steering Committee.
- b. Narrative JP Progress report, reviewed and endorsed by the PMC before its submission on 28th February each year.
- c. Financial Progress Report. Each UN Agency will submit to the MDTF Office a financial report stating expenditures incurred by each programme during the reporting period by 31st March.

The MDTF Office will submit the Consolidated Joint Programme Progress reports to the Resident Coordinator who distributes it to the NSC members. Decisions and comments by the NSC should be duly recorded and shared with all stakeholders in order to ensure the full coordination and coherence of MDG-F efforts.

The timeline for submission of reports for the annual reporting is shown in the chart below:

Report Name	Coordinating Author /Consolidator	Approving Authority	Dead-Line (reporting period: 1 Jan - 31 Dec)
Narrative Joint Programme Report	Participating UN Organizations jointly at Country Level	PMC	28 February
Financial Progress Reports	Participating UN Organizations HQ Level	Financial Officer/ Comptroller	31 March
Consolidated Joint Programme Progress Report (including AA Management Brief, JP Narrative Report and Financial Reports)	MDTF Office	MDTF Executive Coordinator	31 May

PHK

Ex-ante Assessments and cross-cutting issues

Gender inequalities underlie a number of other cross cutting issues, which should be recognized and addressed during programme implementation, at every opportunity.

HIV/AIDS

The continued increase in HIV prevalence and the growing impact of AIDS is not only Namibia's foremost challenge to fulfilling rights to life and health, it is a threat to the fulfilment of all human rights in the nation. The 2006 sero-prevalence ratio among pregnant women rose slightly to 19.9% although this hides large regional variations such as at Katima Mulilo where the prevalence ratio was 39.4%. As a result of AIDS, Namibia's life expectancy declined from 61 to 49 between 1991 and 2001 and this has a huge negative impact on the Human Development Index. By the end of 2006, 30,000 PLWHA were accessing antiretroviral therapy (ART) from one of the 35 district hospitals, nationwide. However, Namibia estimates that 139,000 will need ART by 2012²⁰. Each year, there are now more people falling ill, dying and leaving behind a rising number of orphans and vulnerable children (OVC). Youth unemployment may be as high as 60% leading to an increased sense of hopelessness, increasing alcohol abuse and subsequent risky sexual behaviour.

Although knowledge about HIV/AIDS transmission is widespread, the required behaviour change is happening at a slow pace. There remain high rates of unprotected sex with an infected person and multiple partners. All implementing partners should address the following issues in their activities: counter stigma, discrimination, fear of HIV/AIDS and TB and PLWHA; the low status of women particularly girls and the resulting lack of their reproductive rights, discourage transgenerational sex and alcohol abuse,

Reproductive Health

Although closely related to HIV/AIDS prevention, reproductive health is government funded with little support from large partners. Yet, interventions that disregard women and girls' reproductive health and rights will have a reduced impact on their targets. There are too many unplanned pregnancies particularly among teenagers and youth, resulting in infanticide and unsafe abortions. Sexually Transmitted Infections (including HIV) are at unacceptably high levels (80,000 people were treated for STIs in 2005/06. To many rural women, reproductive health services remain inaccessible and unaffordable, resulting in high maternal morbidity and mortality. Attitudes held by men and women that men have reproductive rights over women lead to unwanted pregnancies, gender base violence, risky sex, poor communication between partners and more specifically low VCT testing of couples and knowing ones partner's status.

Some specific interventions are included in this proposal that assist Government and partners to integrate reproductive health and rights and gendered approaches. Strengthening universal access to Reproductive Health incorporates the protection and promotion of reproductive rights for individuals and couples. Many activities in the Joint Programme reach women and girls and men, providing opportunities advocate for a change in reproductive behaviour based on informed choices.

PHR

Legal Context or Basis of Relationship

This section confirms that the cooperation or assistance agreements²¹, which are the legal basis for the relationships between the Government and each of the UN Organizations participating in this Joint Programme, will apply. Each Agency's activities under this Joint Programme will be governed by the respective applicable basic and other agreements of the Agency. The specific applicable legal arrangements between Namibia and each of the participating UN agencies are as follows:

Legal Context

Participating UN Agency	Agreement
UNDP	The Government of the Republic of Namibia and the United Nations Development Programme (UNDP) entered into Standard Basic Assistance Agreement on 22 March 1990.
UNESCO	UNESCO operates under the Agreement on the Establishment of a UNESCO office in Namibia between UNESCO and the Government of Namibia, signed on 25 September 1992.
UNFPA	The United Nations Population Fund and the Government of the Republic of Namibia signed a memorandum of understanding for the establishment of the UNFPA representation in Namibia, on 07 February 2006 (refer to footnote 24).
UNICEF	The United Nations Children's Fund operates in Namibia under the Basic Co-operation Agreement signed between The Government of the Republic of Namibia and UNICEF on 12 September 1990.
FAO	The Government of the Republic of Namibia signed a letter on 20 June 1990 for the establishment of the FAO Representation in Namibia.

Each participating UN Agency shall carry out its respective part of the Joint Programme activities in accordance with the regulations, rules, directives and procedures applicable to it. Accordingly, personnel shall be engaged and administered, equipment, supplies and services purchased, and contracts entered into in accordance with the provisions of such regulations, rules, directives and procedures. On the termination or expiration of this Agreement, the matter of ownership shall be determined in accordance with the regulations, rules, directives and procedures applicable to each Agency, including where applicable, its basic agreement with the Government.

²¹ The Basic Cooperation Agreement for UNICEF; Standard Basic Assistance Agreement for UNDP, which also applies to UNFPA; as well as the Country Programme Action Plan(s) where they exist; and other applicable agreements for other participating UN organizations.
