(T) Indicator 3.1	Target					
(U) Indicator 3.2	Target					
(V) Indicator 3.3	Target					
W) Implementation Plan* Describe how you plan to mplement these activities maximum 1500 characters)	Implementation will be undertaken jointly with the local partners - Baniadam, SYPD and VARDO. The partners will have responsibility for specific locations/ beneficiaries and their detailed implementation plans shared with OCHA field staff and tricluster members during coordination meetings for information and where possible their participation. NRC will undertake direct procurements for the solar lamps and settlement planning materials, while shelter construction materials will be procured by the partners, following NRC compatible guidelines. Beneficiary selection, mobilization and distribution of the solar lamps will be undertaken by the partners and settlement leaders. Shelter erections will be undertaken by the partners and beneficiaries, with technical support and supervision by NRC. Full assistance will be availed to the most vulnerable beneficiaries. NRC technical staff will provide construction and settlement planning training, onsite planning, supervision and oversight throughout the Implementation period. To the extend possible, labour for erections will be sourced from the beneficiary community. The project's benefits are seen to go beyond the provision of shelter and distribution of lamps; skills training, while the beneficiaries living environment is improved hence their overall wellbeing, increased protection is secured through lockable shelters. Settlement management / governance, security and the provision of basic services are set to improve from well-planned settlements. The solar lamps will be provided to all the targeted/selected households, following shelter erections.					

MONITORING AND EVALUATION (to be completed by organization)

(A) Describe how you will monitor, evaluate and report on your project activities and achievements, including the frequency of monitoring, methodology (site visits, observations, remote monitoring external evaluation, etc.), and monitoring tools (reports, statistics, photographs, etc.). Als describe how findings will be used to adapt the project implementation strategy. (maximum 1500 characters) *

NRC shall put mechanisms and systems for continuous follow up and monitoring throughout the project implementation period. Joint monitoring visits will be organised with the Tri-cluster and OCHA teams. All reports for monitoring will be kept in accessible files. NRC has standard Agreement documents for implementing partners, to be used for this undertaking, which elaborately outline responsibilities, means of implementation, work plan, intended impact, budget, etc. Communities' expectations will be managed thro ugh mobilization and discussions prior to commence and during implementation of activities, involving partners staff and led by NRC staff. NRC technical and field monitoring staff will be on ground, to work with the partners and beneficiaries throughout the project, and offer onsite guidance and supervision of activities. Post implementation monitoring of the transitional shelter and settlement planning activities will be undertaken towards the end of the project, and reported in the final project report. Ordinarily, this may overlook settlements that will recently have received assistance, while focusing on those assisted earlier, where the time lapse will have allowed for noticeable improvement of conditions and perceptions. NRC will continue to provide weekly updates to the cluster alongside interim and final reports to CHF. The information need for these reports will be gathered through continuous monitoring and by using checklist as well as PDM. In addition, NRC has recently strengthened its M&E resources at the Nairobi and the field level in order to ensure the timely and systematic collection of data. M&E will follow NRC's recently updated nonitoring and evaluation framework and tools.

Must be in line with the log frame Mark "X" to indicate the period activity will be carried out
