BACKGROUND INFORMATION

Humanitarian context: Describe the current humanitarian situation in the specific locations where this project will be implemented

Since the eruption of the December 2013 conflict, violence continued to intensify and spread across the country which has exacerbated the suffering to hundreds thousands of Women, Men, boys and Girls across the country. The on-going conflict have cause Mass displacement of Women, Men, Boys and Girls within the country and other flee to neighboring countries. According to the biweekly OCHA update of June 30th estimated that More than 1.6 million people are displace internally and more than 600,000 million fled to neighboring countries. Leer, Pigi and Fangak are the worst of the most underserved and conflict affected counties in both Unity and Jonglei states. The escalating violence in unity state and Northern Jonglei (Fangak and Pigi) has forced civilians (Boys, Girls, Men, Women and elderly) to flee to deep off-road swampy and small pockets of Islands. In inaccessible area for better protection from potential attacks. Report from the field suggests high number of IDPs being experience in Fangak and Eastern side of Leer from other neighboring counties in southern unity state especially Koch, Guit and mayandti. IRNA report conducted on 16-18 June in Fangak indicated that 5,631 people had moved from Unity to Fangak. Pigi County especially Kurwai has been a shelter to over 5000 IDPs who flee from Malakal and from the recent displacement from Panyikang area. The IDPs in these localities have no shelter have sett-up a temporary shed under trees and lacking basic services including limited health services. The current crisis has caused a major public health crisis as it

aggravates the already weak health infrastructure deeper into crisis. Since the violence erupted, already severely insufficient primary health care services have been extensively disrupted in these three counties. Most of health facilities in those active conflict zones forced to close, This had adversely affected access to Primary Health care in these localities difficult and almost impossible. Most facilities are looted burned and destroyed hence with poor infrastructure, high level of insecurity together with the rainy season will aggravate and increase the morbidity and mortality of the IDPs and the host community of the three counties.

Following the repeated attacks of civilian IDPs and the local community in Leer and Pigi Counties civilians are forced to abandon their locations to the most inaccessible and swampy areas, hence with the rainy season approaching, given the poor living conditions, and non existent health and nutrition services compounded with poor sanitary conditions there will be a high potential of an increase in morbidity and mortality of the vulnerable community as a result of infectious and communicable diseases, as the WASH facility and access to wash supplies is none where disease outbreak is also an expected scenario if an immediate emergency promotive, and prevention activities and early detection and treatment of the common diseases are put in place.

Following the protracted and chronic social political and economic stress IDPs, the host community has facing a multitude of pressure that predispose to a series of Mental and psychological disorders. UN report on the recent conflict in Leer showed that teenage girls and under age children were raped and physically abused, with the poor health system, the level of suffering will keep on building up hence these localities need an emergency health response to minimize and there by reverse the adverse consequence of GBV, Unwanted Pregnancies, psychological traumas and related communicable diseases.

2. Needs assessment. Explain the specific needs of the target group(s), explaining existing capacity and gaps. State how the needs assessment was conducted, list any baseline data and explain how the number of beneficiaries has been developed. Indicates references to assessments such as Multi-cluster/sector Initial Rapid Assessments (MIRA)

Nile Hope is targeting areas that are seriously affected by the conflict where there are a high concentration of IDPs and remote areas that are physically inaccessible Payams and villages of Fangak and Leer Counties. These areas are perceived as a relatively safes places though are continuously hit by the ongoing conflict which has now harbored thousands of displaced population scattered in the swampy and far inaccessible areas within the counties. The degree of access to primary health care through the funding from HPF do cover only five of the existing sixteen payams and here compounded by the existing conflict there is a population movement and swell in Leer county where by community from adjacent payams are flocking to Leer in search of better protection. This has compounded the health need to IDPs and the host communities who have fled their homes. So as to enhance our service coverage and access to cost-effective interventions such as immunisation, malaria prevention (including IPT and LLITN for pregnant and lactating women), maternal health and surveillance for epidemic prone diseases; four mobile clinics/team will be organized (two in Fangak and Leer counties) for assessing and responding to emergency health care. Since 2008 Nile Hope had been supporting those areas todate and has a clear understanding of the IDP localities, movement and needs in these counties. Thorough the support from HPF Nile Hope is also running five facilities in Leer and the emergency funding will enable Nile Hope to respond to strengthen the health system that is seriously affected by the ongoing conflict in the areas. As the situation of healthcare services in both Unity and Jonglei states are in serious challenge, it is of paramount importance to have an additional funding support to respond to the overwhelmingly high population movement, high service demand from the highly vulnerable community, Hence Nile Hope if gets the CHF funding it will enable us to be able to establish an emergency mobile clinics and provide life saving

3. Description Of Beneficiaries

The emergency health project beneficiaries are largely Women, Girls, Boys and Men of the IDPs and the vulnerable host community currently residing in Leer, Pigi and the Fangak counties in Unity and Jonglei states respectively. Nile Hope being the lead agency in providing health care services in Leer and Pigi and also offering emergency services in Fangak in coordination with CMA was able to identify beneficiaries through the local mechanisms of VHC, Community leaders including women leaders, and the local authorities and actors in the counties. The targeted beneficiaries are a collection of data from our health facilities coupled with the current political trend and movement of communities. Experience has shown most women do not come to health facilities to seek reproductive health services due to Norms and sometime being overburdened by home activities. However with the current trend of violence reports indicate the facilities are seeing Women and Girls who are rape survivors or have experienced gender base violence. Through this emergency health provision Nile Hope plans to target a higher number of women since they are most vulnerable through engaging them from the development of the project and use other community outreach health services to reach those who might not be able to come and seek services in the health facilities. Boys and Girls under 5 years targeted in this project is a projection using the current data in the health facilities in the three counties and suspected health trend in the year 2015. The minority and people with disabilities are also targeted in this project since they have been found to be very vulnerable in the community. Men on the other hand are subjected to injuries, trauma (both physical and mental)l and other myriad diseases. The identified men through health facilities data and 2015 health needs mapping will be also benefit from the proposed emergency health services.

4. Grant Request Justification

South Sudan has one of the worst health indicators in the world. Which have much worsened more following the conflict that started on December 2013. According to UNOCHA bulletin showed that to ver 1.6 million people are internally displaced, where by most of these IDPs are in the three conflict affected states, an assessment also showed that its was only 57% of the Health facilities that are operating in greater upper Nile before the resumption of heavy fighting started on April 2015, which is clear and evident that the percent have gone far lower as community has abandoned the accessible localities to a swampy and far islands so as to ensure safety and security, access to those high conflict areas is a challenge for reasons associated with security and physical access as roads and means of transport is expensive and impossible. Similarly the three counties; Leer Pigi and Fangak continue to experience spiral of violence and displacement, the IDPs are experiencing reduced access to health services in this area since some of the facilities are inaccessible by the community due to fear possible attack and being caught in crossfire. In general the continued fighting has hampered preventive health care including integrated disease surveillance and response as the communication and access to information is highly affected. The routine vaccinations coverage to Boys and Girls to under five children have nearly ceased in two out of these three counties especially Pigi and Leer counties were arm faction have been exchanging hand since the start of the on conflict. Frequent rupture of drugs supplies and lack of qualified health workers (Women and Men) further aggravate the situation. The most common threats to women, Girls, boys and men of IDPs and the vulnerable host population health include acute respiratory tract infections, acute watery diarrhea, cholera, Malaria, Malnutrition and measles. Lack of access to adequate sanitation and over-crowding in displacement sites have made more women, Boys, Men and Girls to be exp

5. Complementarity. Explain how the project will complement previous or ongoing projects/activities implemented by your organization.

Nile Hope emergency health project is meant to increase availability of emergency health services in Leer and Fangak counties of both Unity and Jonglei states. Nile Hope being the lead agency in Leer in provision of basic primary health care and providing emergency services Fangak, will wish to strengthened and continue providing emergencies health services to the host communities who are in dire needy communities vious are in dire needy community but due to the current crisis they is increase of number of people who are displace from other area and are residing far from the facilities that we are operating. This emergency health project will support the said group and also provide additional support to the health facilities since the population health needs have increase comparing with the time that the counties were calm

LOGICAL FRAMEWORK

Overall project objective

The main aim of this project is to save the lives and prevent morbidity and mortality of the targeted vulnerable group, reaching 16200 Men, 18974 Women, 3133 Boys and 3261 boys including IDPs of Leer and Fangak counties through provision of quality emergency primary health care services and strengthen preparedness to respond to health related emergencies by the end of December 2015

Logical Framework details for HEALTH

Cluster objectives	Strategic Response Plan (SRP) objectives	Percentage of activities
2015 SSO 1: Improve access to, and responsiveness of, essential including emergency health care, and emergency obstetric care services	SO 1: Save lives and alleviate suffering by providing multi- sector assistance to people in need	60
2015 SSO 2: Enhance existing systems to prevent, detect and respond to disease outbreaks	SO 1: Save lives and alleviate suffering by providing multi- sector assistance to people in need	20
2015 SSO 3: Improve availability, access and demand for Gender Based Violence and Mental Health and Psycho- Social Support services targeting highly vulnerable people	SO 1: Save lives and alleviate suffering by providing multi- sector assistance to people in need	20

Outcome 1 Morbidity and mortality rate of Women, Girls, Boys and Men of IDPs and vulnerable host community reduced thus improving the lives of the community and productivity						
Code	Description Assumptions & Risks					
Output 1.1	Emergency and essential health care services provided to 10302 Women, 9897 Men, 2474 Boys and 2575 Girls in Leer and Fangak counties	Health staff available and willing to provide emergency service, security situation is safe in operation area to provide services, enough essential drugs available in the HFs
