WORK PLAN

roject workplan for ctivities defined in the	Activity Description (Month)	Year	Jan	Feb	Mar	Apr	Мау	Jun	Jul	Aug	Sep	Oct	Nov	De
ogical framework	Activity 1.1.1 Assessment and rehabilitation of 20 hand pump boreholes (this may include platform reconstruction) - Tearfund proposes to continue from the previous intervention, but with a focus on platforms. This does require construction, but will prevent seepage of surface water into the water point, to reduce risk of contamination. Tearfund proposes to address the chronic shortfall in safe water coverage in Uror County through the rehabilitation of 20	2015								x	Sep Od X X X X X X X X X X X X X X X X X X X X X X X X X X X X X X X X X X X X X X X	х	x	x
	boreholes. Rehabilitation will target the platforms of boreholes, which protect the water point from contamination by surface water. The rehabilitation of these water sources will provide access to safe water for an additional 10,000 people (women: 1715; men: 1429; 4114 girls and 2742 In addition, as described below, pump mechanics will benefit from more technical trainings, including trainings on the construction of platforms, in order for them to have the capacity to complete more types of repairs.	2016	x											
	Activity 1.1.2 Training and equipping 20 Water-User Committees and 5 pump mechanics- Tearfund will select 5 pump mechanics and provide new training on platform rehabilitation along with the tools required to rehabilitate platforms. All 20 boreholes will include refresher trainings of existing Water User Committees, which include women members on each committee. Community ownership of borehole maintenance is one of the key problems identified to	2015								х	х	х	х	
	ensure the proper prevention against breakages and timely repairs. Involvement of key stakeholders including chiefs, payam administrators, women's and youth groups as well as local leaders will ensure that ownership is communicated before rehabilitation occurs. Training of WUCs will include the chief and payam administrator. Topics included roles and responsibilities (including collection of water-user fees), borehole operations and maintenance, conflict resolution and on water actors/stakeholders.	2016												
	Activity 1.2.1 Water quality testing carried out before and after rehabilitation - This will ensure that the boreholes targeted by Tearfund for platform rehabilitation meet the SPHERE standards for water quality. If not, appropriate measures will be taken to address the identified issue(s). Tearfund will carry	2015								х	х	х)
	out pre-and-post standard biological water quality tests of these water points to ensure that good quality water is consumed by the community and therefore minimise the likelihood of poor health due to contaminated water.	2016												
	Activity 1.3.1 Test pumping and conversion of 2 hand pump boreholes into Mini water yards - A mini-water yard extends the coverage of a single water point through the installation of piping to 12 points. Two mini-water yards will be installed in Uror county. This automatically increases the coverage of one borehole; more household are consequently closer to more water points. The	2015												
	boreholes that are fitted into a mini-water yard are selected because of their capacity to be able to pipe enough water through these 12 water points, in addition to the area's population density and number of existing water points. This will increase the access to safe water for 5,000 individuals where the water yards are installed	2016	х											
	Activity 2.1.1 Selection and training of hygiene and sanitation promoters - Tearfund will select and train 4 village volunteers in each of the target communities to champion hygiene and sanitation behaviour change. The training will prepare volunteers to provide training and to carry out household visits, targeting specifically women who tend to care for the hygiene of the household. Key topics which the volunteers will be trained to share will be:	2015								x	x	х	х	
	 Hand washing and personal hygiene; Safe disposal of excreta; Household sanitation; Safe water chain; Food hygiene; and Solid waste management. 	2016	x											
	Activity 2.2.1 Hygiene and Sanitation Meeting – hygiene promotion volunteers and water user committees will meet to review water safety plans and exchange information on how to practice good hygiene in the households. Water user committees will be responsible to monitor the hygiene of water	2015											x	
	points and will be responsible to promote safe hygiene in the household for water users. The volunteers will make follow up visits to both the water user committees and the beneficiary households.	2016												

W & R DETAILS

Monitoring & Reporting Plan: Describe how you will monitor the implementation of each activity. Describe the tools you plan to use (checklist, photo, questionnaires, interviews, suggestion box etc.) in order to collect data and how you will store data. Explain the frequency type and protocol of reporting (how often do you report about what to whom?). State if, when and how you plan to evaluate your project. The data collections will be carried out by WASH Extension workers (6) who will be supervised by a WASH Extension workers' Supervisor (1) who will in turn pass the information gathered to the WASH project Officer who will then report it to the WASH Project Manager. The information that is gathered will be submitted weekly something to report on as regards the project activities. The sources of verifications will be distribution lists, borehole rehabilitations reports, Training reports, attendance lists and rehabilitation reports. These will be compiled after the activities are carried out. Village Hygiene promoters who will be selected and trained will be charged with monitoring of WASH activities in their villages who will be in updating the WASH Extension workers on the progress. The WASH Extension workers on the rogress. The WASH Extension workers on the verifications and collect the and record the data on the indicators which will be shared with the Supervisor who will in turn share with the project officer who wills and the WASH Extension workers on the data by the Village Hygiene promoters and the WASH Extension workers as a monitoring technique. Monitoring to be shared with the supervisor who will be carried out to verify and confirm some of the data by the Village Hygiene promoters and the WASH Extension workers as a monitoring technique. Monitoring to be shared will be used will include WASH facilities monitoring templates that will look at indicators that will show change in behaviours. Data on the project managers is further supported by Tearfund's WASH Coordinator based in Motor who has over 15 years experience working in the sector in South Sudan. He provides quality control of project implementation by overseeing the completion of technica activities, like miniwater yard installation. And finally, the entire WASH staff are supported by a Regional WASH Activics based in Zimbabwe who provides feedback on project plans and reports.
