

Requesting Organization: AFGHANAID

Allocation Type: 2022 3rd Reserve Allocation

Primary Cluster	Sub Cluster	Percentage
WATER, SANITATION AND HYGIENE		100.00
		100

**Project Title:** Provision of emergency WASH supplies in Aybak, Feroz Nakhchir and Hazrat-e- Sultan districts of Samangan

Allocation Type Category : Field activities

#### **OPS Details**

Project Code :		Fund Project Code :	AFG-22/3481/RA3/WASH/INGO/23742
Cluster :		Project Budget in US\$:	644,629.25
Planned project duration :	6 Months	Priority:	
Planned Start Date :	27/11/2022	Planned End Date :	30/06/2023
Actual Start Date:	18/12/2022	Actual End Date:	17/06/2023

#### **Project Summary:**

The Allocation Strategy Paper for the 3rd Reserve Allocation of 2022 details a complex set of needs among vulnerable populations. In Aybak, Feroz Nakhchir and Hazrat-e- Sultan districts of Samangan province, political instability, recession, and COVID-19 had further impact in limiting access to safe drinking water, widespread illness and mortality and starkly reduced income opportunities, depleting households' productive assets and reducing their capacity to cope with shocks. Further, communities in Samangan province are particularly vulnerable to natural hazards and drought which coupled with harsh winters and prolonged conflict have resulted in the destruction of community infrastructure, including water systems, limited access of more than half of the population to safe drinking water and to WASH facilities and place them at high risk of acute watery diarrhea outbreaks (AWD) and other diseases.

Data from the 2022 Humanitarian Response Plan, WASH Cluster and Afghanaid's needs assessment shows that vulnerable households in Samangan need urgent assistance to address their WASH needs ahead of the winter season. Particularly, Afghanaid's needs assessment conducted in October 2022, highlighted that the target communities have limited access to safe drinking water, lack water treatment options and high-risk hygiene practices. Hence, in line with WASH cluster priorities for this allocation, Afghanaid proposes to provide crucial WASH assistance to a total of 98,800 vulnerable households in Aybak, Feroz Nakhchir and Hazrat-e- Sultan districts of Samangan. Based on Afghanaid's field staff observation and communities' preference, the following interventions – developed in consultation with the regional WASH Cluster - are proposed:

- A total of 98,800 households will receive hygiene promotion and AWD awareness in the target districts in addition to chlorine tablets or sachets and handwashing soaps.
- The intervention will also provide rehabilitation/reparation and protection support for a total of 16 pipe schemes and/or hand pumps (6 in Aybak targeting 2,140 households, 7 in Hazrat-e-Sultan targeting 1,818 HHs and 3 in Feroz Nakhcher targeting 648 HHs);
- Provision of 3,200 water filter kits to 3,200 vulnerable households (1 per household);
- Creation of WASH committees in 30 villages along with provision of O&M tool kits and technical trainings on the operations and maintenance of water tool kits.

Participants will be selected using the vulnerability criteria set by the WASH cluster to ensure that households in most acute need are targeted, including women-headed households, households with a large number of dependents, and households with one or more members with a disability.

Afghanaid is well placed to implement this project, with over 20 years of continuous presence in Samangan. Afghanaid also has extensive humanitarian programming experience, with current and recent humanitarian projects in Samangan, funded by AHF, WFP and GIZ. These projects include WASH, emergency food/cash, livelihoods, winterization, and shelter assistance. Afghanaid has consulted with the local authorities to deliver its programmes in the target areas and will actively engage the local actors to explain that the project can only proceed if authorities do not interfere and permit us to employ and target women. Project staff will work closely with the target communities and stakeholders working on the ground to mitigate any anticipated risks.

By providing urgent WASH assistance this intervention is expected to reduce the risk of outbreaks, prevent illness and mortality, boosting the resilience of 98,800 vulnerable households against future shocks. The project will be also synergized with the WASH and ESNFI cluster priorities and other Afghanaid projects implemented in the targeted districts, including our WFP-funded resilience building project to enable a joined-up and complementary response.

# Direct beneficiaries :

Men	Women	Boys	Girls	Total
22,295	23,204	33,442	34,809	113,750

#### Other Beneficiaries:

Beneficiary name	Men	Women	Boys	Girls	Total
Host Communities	22,295	23,204	33,442	34,809	113,750

#### **Indirect Beneficiaries:**

The extended household members of the direct beneficiaries will be the indirect beneficiaries of this intervention, and those are estimated to be more than 197,600 men, women, girls and boys. Further, laborers working on the construction of water facilities and local market salesmen selling construction materials and tools will also indirectly benefit.

#### **Catchment Population:**

#### Link with allocation strategy:

Afghanaid has designed this response to align closely with the priority locations and activities detailed by the Cluster in the Allocation Strategy Paper for the 3rd Reserve Allocation of 2022 (and ICCT Winterisation Prioritisation Plan 2022). Through the proposed activities, Afghanaid is able to ensure that improved drinking water provision, necessary WASH items, facilities and hygiene promotion are provided to vulnerable, shock-affected households, in line with the HRP Strategic Objective to provide timely, lifesaving, equitable and safe assistance to crisis-affected people of all genders and diversities to reduce mortality and morbidity. The proposed response also directly contributes to the WASH Cluster's specific outcome objective under this Strategic Objective, which is to ensure that vulnerable people in need receive timely, equitable and safe, life-saving and effective emergency WASH assistance. The intervention is also designed to contribute to the HRP's Strategic Objective 3, that vulnerable people of all genders and diversities are supported to build their resilience and live their lives in dignity, particularly through the provision of safe and appropriate sanitation facilities, and in assisting people to live in freedom from disease.

In addition, the activities under this project which will align with WASH in Health under the allocation strategy paper will support the WASH's cluster's objective in the HRP to support vulnerable people affected by AWD/cholera outbreak by providing timely and effective emergency WASH assistance to prevent further transmission, by repairing and building AWD awareness, to mitigate the threat of AWD outbreaks.

Further, the intervention meets the requirement to integrate with a response in another cluster(s). The project will tie in with the ES/NFI project, which is providing transitional shelter and shelter repair assistances in Aybak, Feroz Nakhchir and Hazrat-e-Sultan districts. By incorporating the activities outlined in the allocation strategy paper for locations where WASH and ES/NFI activities are integrated, the intervention will therefore provide a holistic response to the urgent shelter and WASH needs of households affected by natural shocks. Samangan, where this project will be implemented, is identified as an eligible location for integrating WASH and ES/NFI response, having been exposed to conflict and drought conditions, and with high susceptibility to cold in winter period. A response in this province therefore aligns with the HRP's prioritization of populations vulnerable to natural disasters and in high priority affected provinces, including Samangan. Hence, this project will repair the potable water resources for the communities over the winter and spring season, while the project from ESNFI will provide the assistance in terms of shelter assistance to the populations.

The list of needs and vulnerabilities crisis faced by a large number of Afghan population include issues of food security and agriculture; education; health; WASH; nutrition; natural hazards; difficult physical access; among other factors. Of these vulnerabilities, lack of adequate access to WASH facilities is known to worsen people's health resilience. Providing facilitation/restoring of safe drinking water are some of the most effective strategies to improve the health status of the population to enable them to withstand the effect of multiple disasters in their lives

# **Sub-Grants to Implementing Partners:**

Partner Name	Partner Type	Budget in US\$

#### **BACKGROUND**

# 1. Humanitarian context analysis

Page No : 2 of 32

#### 2. Needs assessment

Afghanaid has developed the proposed response in consultation with the regional WASH Cluster, who recommended the proposed activities and locations as a much-needed WASH response. The target area and activities are based on the Cluster's analysis through 2022 and data gathered through the field staff in Samangan.

Recent discussions conducted by Afghanaid in districts in Samangan, Badakhshan and Ghor pointed out the negative impacts of drought not only on agricultural production and crop yields, exacerbating food shortages. Water shortage also threatened drinking water sources as underground water table increasingly reduce in the province.

Samangan province is identified by the WASH Cluster in the 2022 HRP as one of drought-affected high priority provinces, which is therefore at increased risk of reduced water quantity and quality and AWD outbreaks; it is one of the provinces where more than half percentage of children under 5 are reported to experience AWD at the HH level. Further, at the district level, Aybak, Feroz Nakhchir and Hazrat-e-Sultan are identified as a high priority area for WASH response within Samangan in the Inter-Cluster Coordination Team Prioritisation analyses.

According to Afghanaid's field staff observation in the needs assessment from the targeted areas, there are an already high level of preexisting need in the targeted districts, and an almost total absence of improved water sources in the target communities. Access is notably lower among larger households (consisting of 8 or more members), particularly this will further deteriorate in winter period, suggesting particular vulnerabilities exist within the population.

One to one discussions with the community stakeholders confirmed that water sources in the target communities are unprotected and almost invariably in need of repair during the winter and spring period; due to freezing cold weather and natural affects in the area.

Also the link between AWD and unprotected water source is well-attested, for example high prevalence of diarrheal diseases in the communities, such shock is expected to further undermine vulnerable households' coping capacity. This clearly indicates the need for WASH in health programming to prevent AWD outbreaks on a larger scale.

In addition, Afghanaid plans to conduct another technical assessment in the target areas, to evaluate further the condition of existing water infrastructures and categorize the most effective and appropriate upgrades to ensure restoring of their functionality during the winter period. However, this field assessment conducted in October confirmed the need for repairs to water systems in each winter season, to repair the damages and protect them from further freezing and cold hazards.

### 3. Description Of Beneficiaries

#### 4. Grant Request Justification

Still recovering from the impacts of 2021's devastating drought, flood and conflicts, Samangan province is expected to be affected still further by continuing La Nina conditions in the 2022 summer and winter periods. The cumulative effects of these climactic conditions are provoking a water scarcity crisis in Samangan, with reduced water available for drinking and hygiene as well as livestock and agriculture. In addition, reduced ground moisture in drought-affected areas leads to increased risk of flooding, especially between May and July following sporadic spring storms.

Damage to water points due to freezing cold weather and other disasters in winter, then in spring have adverse impacts on health and WASH conditions: following a disaster, water systems may be damaged and safe drinking water inaccessible for many households, compounding existing water shortages. Intervention is needed in the targeted communities to repair and restore the damaged water systems, and to protect them from further damage; assuring a reliable supply of safe and clean water to people. This is the objective of the proposed activities under this project. The consumption of unsafe water, as well as negative coping mechanisms such as prioritizing scarce water for drinking at the expense of hygiene and inadequate sanitation facilities, increase the risk of infectious and waterborne diseases, including acute watery diarrhea (AWD). The spread of communicable diseases is already a serious risk, which is further being exacerbated by natural disasters. Limiting the risks of such outbreaks is another aim of this activities included under WASH in Health under this grant

By restoring damaged water systems, distributing water kits including materials for water treatment, and delivering hygiene promotion the response will ensure that the target households receive the assistance they need in a timely manner. This will mitigate the foreseen risks, thereby helping to reduce morbidity and mortality in disaster-affected communities. Together with other Afghanaid existing projects in the area with which this WASH intervention response is planned to align, these activities will help to prevent the use of negative coping mechanisms, such as the sale of productive assets and the withdrawal of children from school, and ensure that vulnerable households are safeguarded from the impacts of freezing and cold winter, protected from diseases, and provided with dignity in their living spaces and WASH facilities. The proposed response fully aligns with the WASH cluster's priorities for this allocation, and activities and target locations have been developed in close consultation with the cluster.

Afghanaid is well positioned to rapidly launch this intervention, with more than 30 years of experience in Samangan, including numerous emergency response and WASH interventions funded by the AHF and other donors. Afghanaid has a well-established presence in the target province and the target districts, experienced staff with a proven track record of providing humanitarian assistance, and a roster of Social Organizers that can be deployed rapidly. We have excellent access in Aybak, Feroz Nakhchir and Hazrat-e-Sultan districts, strong acceptance among target communities and de facto local authorities, and extensive experience coordinating our humanitarian interventions with local and provincial stakeholders, including with national and regional clusters. In the last year alone, Afghanaid has worked to deliver emergency WASH, winterization, NFIs, shelter, food, cash and livelihoods assistances responding to needs resulting from natural disasters and conflict-driven displacement in Samangan, Ghor, Daykundi and Badakhshan provinces.

# 5. Complementarity

# LOGICAL FRAMEWORK

#### Overall project objective

Page No : 3 of 32

To safe guard clean drinking water of populations through repairing of water facilities and reduce the risk of waterborne diseases during the winter period in Samangan.

WATER, SANITATION AND HYGIENE		
Cluster objectives	Strategic Response Plan (SRP) objectives	Percentage of activities
2022 HRP WASH Outcome 1.1: Vulnerable people in need receive a timely equitable and safe, life-saving and effective emergency WASH assistance.	SO1: Timely, multi-sectoral, life-saving, equitable and safe assistance is provided to crisis-affected people of all genders and diversities to reduce mortality and morbidity.	78
2022 HRP WASH Outcome 3.1: Vulnerable people in urban and preurban areas have gain access to resilient and sustainable WASH services.	SO1: Timely, multi-sectoral, life-saving, equitable and safe assistance is provided to crisis-affected people of all genders and diversities to reduce mortality and morbidity.	22

Contribution to Cluster/Sector Objectives: By supporting acutely vulnerable households in Aybak, Feroz Nakhchir and Hazrat-e-Sultan districts with the WASH assistance they need, including emergency repairs/restore to damaged water sources, facilities, hygiene kits and hygiene promotion, the project will support the targeted households to access clean water and mitigate the risks of disease outbreaks. This will ensure that affected households have safe and dignified access to WASH facilities, and will prevent increased illness and mortality. Emergency water system repair and WASH item distribution will contribute to emergency assistance provided under SO1, whereas latrine facilities, support to WASH O&M committees, and hygiene promotion will contribute to resilience building under SO3.

#### Outcome 1

Reduced risks of waterborne diseases and related mortality rates through restoring drinking water sources and promotion of hygiene practices.

#### Output 1.1

# Description

Community drinking water sources restored and water kits provided to households in affected areas in Aybak, Feroz Nakhchir and Hazrat-e-Sultan districts

# **Assumptions & Risks**

- (1)The security situation in the proposed project areas remains manageable; security focal points in each of the offices and the head office security team carry out continuous monitoring of security developments in the targeted areas to ensure this remains the case (2) Any natural (including freezing cold weather) and man-made disasters may prolong the emergency situation and may affect project implementation.
- (3) The target communities and local institutions are supportive of the project and access is granted by all stakeholders; project staff will conduct robust community mobilization activities at the outset of the project to ensure community understanding and acceptance of the project. Through the inception workshop, project staff will also explain the project objectives, activities and assistance modality to participating community leaders. Local community representatives will also be included in participant selection and distribution committees. (4) Local de facto representatives continue to allow access to the targeted areas and populations (including women) in order for assistance to be delivered and do not impose undue taxation on the distributing agency or participants; Afghanaid proactively engages de facto representatives, and project staff maintain close relationships with the targeted communities so that they are able to act as mediators in the case of access issues and conflict. Project staff also provide these communities with a robust orientation session explaining Afghanaid principles and underlining that no taxes should be paid on humanitarian assistance, and in the case of post-distribution taxation participants should immediately report this through the feedback channels in place.
- (5) The Covid-19 pandemic in the area remains contained; to mitigate this risk, project staff will raise awareness of hygiene and Covid-19 prevention guidelines during community mobilization and distribution activities, activities will be held in open air or in large enough spaces for participants to keep the required distance from one another, and PPE will be used by staff and participants throughout the project activities. In light of the WHO and Afghanaid Covid-19 guidance for distributions, staff will arrange special distribution times for vulnerable participants where needed, for instance to allow elderly people to avoid crowds.
- (6) Repairing items remain available in local communities and markets and are not subject to significant inflation; the project team will conduct continual market monitoring to ensure that markets remain functional and accessible to the target populations. Where significant inflation or disruptions in market access are found, Afghanaid will consult with the cluster on adapting the project, for instance by changing the assistance modality to in-kind assistance.

#### **Activities**

#### Activity 1.1.1

#### Standard Activity: Customized Activity

Project registration with relevant ministries:

The project's registration with the ministry of Economy and then MoU with the MRRD in Kabul and province is necessary before starting of the project. Hence, upon signing of the Grant Agreement, Afghanaid can start this process soon, and will assign a particular staff to follow up the registration of project and MoU signing process with them accordingly. It is expected that the project's registration and MoU process will take about 30-45 working days at the national and provincial levels.

#### Activity 1.1.2

# Standard Activity: Customized Activity

Recruitment and orientation of project staff:

The project will recruit a dedicated team of project staff who will support the project's implementation. Before they are deployed to the field, these staff will be trained on Afghanaid's policies, covering issues such as gender equality, working with vulnerable populations, prevention of sexual exploitation and abuse (PSEA), safeguarding, participant feedback mechanisms including whistleblowing channels, prevention of fraud and corruption, and the organizational code of conduct. Staff will also be trained on basic risk communication and community engagement (RCCE) skills and approaches, to ensure a two-way dialogue with community members when discussing their concerns about COVID-19. Using the most up-to-date messaging provided by the RCCE working group, the project team can effectively tackle misinformation directly with communities in the field and contribute to the rumor tracking of the RCCE working group.

#### Activity 1.1.3

#### **Standard Activity: Customized Activity**

Inception workshop:

At the outset of the project, Afghanaid will organize an inception workshop in the target province to introduce the project to relevant stakeholders, including local community leaders and community members representing marginalized communities, as well as representatives from other NGOs, and orientate them on the project's objectives and activities. This workshop will serve as an initial meeting with all relevant stakeholders to ensure all parties are fully aware of the project implementation plans in the area, provide a space for dialogue about the project and its implementation, gather further feedback from local community representatives, and use that feedback to adjust the project and increase the communities' support for it. Community representatives will also be asked to cascade the information provided to their respective communities. In line with Covid-19 precautionary policies, staff and attendees will be required to follow relevant guidelines including hand washing and social distancing.

# Activity 1.1.4

# Standard Activity: Customized Activity

Coordination with relevant stakeholders:

Afghanaid will regularly report to and coordinate with local stakeholders, including NGOs active locally, at regular provincial meetings, on issues which will include avoiding duplication of efforts/geographic coverage areas, participant selection, progress and challenges. Afghanaid staff will also take part in relevant regional cluster meetings. These meetings will ensure that Afghanaid and local stakeholders are able to maximize opportunities for collaboration and avoid duplication. Afghanaid will also hold regular meetings with community representatives and marginalized community members, which will provide an additional avenue of dialogue between Afghanaid and members of the target communities. Through these meetings, communities will be able to deliver feedback to Afghanaid to inform adaptive management of the project, and Afghanaid is able to report back to community members how past feedback has been addressed. Afghanaid will seek and refer to guidance from OCHA in managing relationships with the local authorities. Afghanaid will also coordinate with AWAAZ to ensure the AWAAZ team is informed of key project details and is able to respond to any queries from project participants. Afghanaid will share anonymized feedback, according to shared data points, to the AAP WG for collective feedback advocacy and analysis as well.

### Activity 1.1.5

#### Standard Activity: Customized Activity

Community mobilization and sensitization:

Afghanaid will conduct sessions in all targeted communities to explain the intervention, its objectives, and the participant selection criteria and process. Project staff will raise awareness about vulnerability and vulnerable groups in the communities, reasoning behind prioritizing these groups such as female-headed households and households with dependent children head in the intervention.

This is done to ensure that the targeted communities understand the project, and to strengthen community acceptance. Project staff will also ask community members if the project exclude any particularly vulnerability which should be considered, so that the project could provide the required support where needed.

Aside from providing communities with information about the project, the community mobilization sessions will also offer community members a space to provide input and feedback. The communities will be provided with an orientation on the various feedback channels available to them, such as the CDC grievance handling mechanism (where CDCs are operational) and the participant selection and distribution committees, and they will be provided with the contact details of project staff, Afghanaid senior management (in case of safeguarding incidents and whistleblowing procedures), and AWAAZ. Project staff will also provide the target communities with an orientation on Afghanaid's safeguarding and whistleblowing policies and procedures. Further, the project staff will regularly ask project participants about what information on the project and assistance they would like to know and what their trusted sources are for receiving that information. Afghanaid will provide requested, clear information through the people and communication channels they prefer and in the languages and formats they want. Participants will be told they have a right to ask questions and obtain information.

As part of the community mobilization sessions, Afghanaid will consult with communities on the identified projects for repairing, project beneficiaries, their selection, water kits and hygiene kits distribution plan, including the number and size of the assistance, and any protection concerns the communities have around the project planned inputs. Where communities raise concerns about potential protection risks during the cold winter months due to heavy snowfall, Afghanaid will consult with the cluster on revising the implementation and distribution plan. Afghanaid will also inform the target communities on the implementation and water sources' restoring mechanism chosen for this project to ensure community acceptance of this system.

In line with guidelines on health, safety and Covid-19 prevention, all community mobilization sessions will be held outdoors where possible, or in large enough spaces to allow participants to keep the required distance from one another. Project technical officers will start each community session by going over important guidelines for Covid-19 prevention, including the importance of hand washing, mask wearing and social distancing. All participants will be instructed to comply with these guidelines throughout all project activities.

#### Activity 1.1.6

# Standard Activity: Customized Activity

Establishment of selection and distribution committees:

To ensure full transparency and fairness in the selection of participants, distribution of inputs and implementation of the project, Afghanaid will establish a participant selection and distribution committee which will each consist of local community members (e.g. CDC members, religious leaders, and/or other trusted community members such as local teachers and traders) as well as Afghanaid staff. Other stakeholders including local authorities may also be included in the committees in order to engage their support for the project; participant selection in accordance with the criteria however remains the duty and responsibility of Afghanaid, and no undue influence over community or participant selection will be accepted. Members of the two committees may overlap or may be entirely separate, but Afghanaid will form the committees so that both include representatives of the target communities, and that the committee membership reflects the diversity of the target communities in terms of age, gender, ethnicity and other relevant characteristics. Afghanaid will also advocate for women to be fairly represented on these committees. Committees' members will be instructed on Afghanaid's SOPs for humanitarian assistance delivery, and must respect the principles of these SOPs including Afghanaid's guidelines for the protection of participant data. Ideally, Afghanaid forms the participant selection/distribution committees at the district level.

The participant selection committees established by Afghanaid will select participants, facilitating the identification of the most vulnerable persons to be selected for assistance by agreeing on a set of participant selection criteria and verifying all selection lists. The selection criteria will follow Cluster priorities where applicable, focusing specifically on women or child-headed households, households with a dependency ratio of 8 or more, households without a reliable income, and households which have one or more members with a disability or chronic illness. These criteria will form the basis of the participant selection tool which will be agreed upon by the committee. Meanwhile, duplication will be prevented through coordination with other agencies operating locally.

The distribution committees established by Afghanaid will monitor all distribution activities and project implementation, ensuring transparency and accountability in the process by observing all distributions and implementation and reviewing the records. Further, the committee members will also contribute to monitoring local security dynamics within their area.

In addition to the above, both committees will support the project to gather feedback from participants during distributions, including managing any complaints and mitigating any conflict arising from the intervention, by acting as focal points for participants. Any feedback collected this way will be gathered by the M&E Coordinator in regular progress reports or raised directly with project management by committee members in case of urgent follow-up. The community representatives on the committees will be tasked with updating their respective communities on how their feedback has been implemented, and will provide community members with an additional avenue of communication with project management.

Conversely, to ensure that the committees' power in the participant and distribution processes does not lead to abuse, the target communities are provided with the contact details of project management, Afghanaid senior management (for safeguarding incidents and whistleblowing procedures), and the confidential helpline AWAAZ. Where abuses by committee members are raised, Afghanaid will take direct action to protect those affected from harm and remove the committee member(s) involved from their position.

#### Activity 1.1.7

Standard Activity: Carry out rapid integrated or sectoral WASH-related needs assessment of affected people and communities to determine the need for further WASH assessment

Participant selection for water kits, verification and re-assessment of communities' water sources:

After the participant selection committees are established, its members will start the participant selection process using a set of selection criteria agreed by the committees beforehand. The participant selection committees established by Afghanaid will select participants, facilitating the identification of the most vulnerable persons to be selected for WASH kits assistance by agreeing on a set of participant selection criteria and verifying all selection lists. The selection criteria will follow Cluster priorities where applicable, focusing specifically on women or child-headed households with a dependency ratio of 8 or more, households without a reliable income, and households which have one or more members with a disability or chronic illness. These criteria will form the basis of the participant selection tool which will be agreed upon by the committee members. Meanwhile, duplication will be prevented through coordination with other agencies operating locally.

Once a selection of participants has been proposed, the selected participants will then be verified extensively by the committee and M&E Coordinator through community visits to ensure that the most vulnerable members of the targeted communities are included in the final list. M&E and project staff will verify all participants before distribution takes place. Each participant selection list is then signed and endorsed by the committee members.

Further, the project technical team will conduct another assessment of the target areas to verify the status of the identified water sources and the improvements they require. The engineers will conduct the assessment to identify any required repair works and will be also regularly visiting the target areas to further check for the communities' water supply facilities and provide the required support to them during the winter and spring period.

Communities' whose water sources have been damaged and are repairable will be prioritized for the activities. A rapid household survey will then be conducted to gather the demographic and vulnerability information required to provide suitable WASH kits assistance for each targeted households as well; such as the household size or cohabitation of multiple families will be used to know about number of person per households. The findings will be cross-checked through the use of focus group discussions, with separate FGDs for women and people with disabilities as applicable. The FGD findings can be used to adjust water sources designs where needed.

#### Activity 1.1.8

# **Standard Activity: Customized Activity**

Formation of WASH O&M committee:

Afghanaid will form and support 30 Community WASH committees with operation and maintenance training and tool kits for the water supply systems. Part of the responsibilities of these WASH Committees will be the sustainability of the WASH facilities in their area. Orientation and hands-on exposure to the operation and maintenance of the facilities will be provided to the WASH committees' members too. The WASH committees will select their members who will be trained on mechanical skills needed for rehabilitation of the water facilities. Their capacities will be built to manage community water infrastructure; and as a pre-condition to the partnership, community agreement will be secured for the creation of a contribution fund by user groups, to cover operational and maintenance (O&M) costs of the WASH facilities and systems, for which the project will provide O&M kits to each O&M committee. It is planned to form these 30 O&M committees and further train about 30 persons on O&M in these target areas.

#### Activity 1.1.9

Standard Activity: Rehabilitation and improvement of drinking water systems (wells, handpumps, gravity-fed networks, solar-pumping), pilot reverse osmosis water systems, upgrade of WASH services in the public health and protection issues at risk places (markets, gathering events) and institutions (health facilities, schools), hygiene promotion and open defecation free programming with community led total sanitation technics.

Page No : 7 of 32

Purification and Rehabilitation of existing water sources:

Afghanaid has conducted an assessment in October and has identified 16 water sources which require repairing support in these three targeted districts. Afghanaid plans to restore and construct these water sources in these target areas with appropriate repair and protection works during the winter and spring. In line with WASH guidelines, this project will be also looking for to rehabilitate other water sources in the area, which may require repairing support during the project timeframe and those maybe damage due to the freezing cold weather over the project period; so the project will take into consideration the cost of materials, equipment and transportation for each water point to restore the water supply to the target communities.

The recommended level of assistance and funding will also be adapted to the particular water point; Afghanaid will support the communities to mobilize local community solidarity in order to conduct and support the repair works of their water sources.

The following activities are planned for the time being for supporting the water supplies in the targeted areas, however, the project technical team will be also visiting the targeted districts to identify any further water facilities which is/being damaged during the winter and spring time to be supported/fixed and restored.

- 1) Water quality management: the project aims to provide potable water adhering to WHO standards to ensure water quality, by testing for microbial and bacteriological contamination. Afghanaid will conduct water quality laboratory tests accordingly. The water quality analysis will be done in all water points and also at household samples to ensure that the water is safe for human consumption. The project intends to undertake water quality management (tests and shock chlorination) in all the identified 16 water points (mentioned above) for the time being. Afghanaid will sensitise communities' members to consider the safety of water at the point of use to ensure cleanliness standards are maintained from source to usage.
- 2) Protection of 16 identified Pipe Schemes supporting 4,606 households' potable water through repairing of their existing water sources; The assessment conducted by Afghanaid in October 2022 indicated that there is need for protection of existing water supplies in all Aybak, Hazrat-e-Sultan and Feroz Nakhchir districts. These water sources are included repairing of Pipe Schemes, Gravity System, Spring Water Gravity Network, and Solar System. A detailed BoQ is also prepared and attached in the "Documents" page for further reference. Also, in consultation with the targeted communities and MRRD technical staff at the provincial level these water supplies have been proposed for construction. This will ensure reliable access of these communities to safe drinking water over the winter and spring period.

Throughout, technical monitoring will be conducted by project engineers and other project staff to check the existing communities' water sources in the area, also to track repair works' progress, provide technical recommendations to participants, and address any errors/needs.

The project implementation will be carried out through Afghanaid's SOPs for humanitarian assistance. The selection committees will oversee the process of selection, identification, inputs' distribution and implementation of repair works, and this forms a key component of Afghanaid's transparency approach.

All staff and communities will be instructed to comply with hygiene and Covid-19 prevention guidelines. Project staff will take special care in the selection of the distribution points, for water kits, to identify a large enough space to allow participants to keep the required distance from one another.

#### Activity 1.1.10

# **Standard Activity: Customized Activity**

Procurement and distribution of Water Filter Kits:

The participant selection committees will make sure that the most vulnerable people with the greatest needs are selected, and Afghanaid staff will pay particular attention to ensuring that participant lists prioritize the most vulnerable households, using the WASH cluster vulnerability criteria as well as any relevant criteria suggested by the target communities.

Once the selected participants list has been proposed, the selected participants will then be verified extensively by the committee and M&E staff through community visits to ensure that the most vulnerable members of the targeted communities are included in the final list. M&E and project staff will verify all participants before distribution takes place. Each participant selection list is then signed and endorsed by the committee members.

The project plans to identify and select 3,200 vulnerable households to receive Water Filter Kits from the project. The project will procure 3,200 Water Filters and distribute 1 water filter for 1 households in the target communities. Our field staff has proposed this based on their discussion this with the community members in October.

Further, the project will also arrange chlorine tablets and handwashing soaps items to WASH cluster specifications from UNICEF Mazar office and distribute to 98,800 households, according to the WASH cluster guidelines. Afghanaid has already contacted UNICEF in this regard to support the project with the available elements of the WASH kits in their stock. The project and the distribution committee members will be guided by a set of rights-based principles and Sphere Standards which have been and will be applied during planning and implementation of the interventions. All the project staff will be trained on rights-based principles and Sphere Standards in advance of their deployment to the field.

#### Activity 1.1.11

**Standard Activity: Customized Activity** 

#### Regular monitoring and reporting:

Monitoring will take place throughout the project implementation and will be conducted by dedicated M&E personnel. M&E staff will be responsible for extensively verifying all participant lists and distribution logs. The M&E staff will verify all participants receiving assistance through the project prior to distribution, and will conduct pre-distribution monitoring among a sample of participants to ensure they understand the accessible and safe distribution process and the feedback mechanisms available to them. Meanwhile technical monitoring will be also conducted by dedicated engineers and foremen as indicated under activity above.

The project participants and Afghanaid's technical staff will play a vital role in the on-site field monitoring of the project. Apart from using the work plan as a tool to measure the project progress, an indicator tracking tool will be developed that will be used to measure the progress of the set indicators at both output and outcome levels. A dedicated M&E Coordinator will be responsible for extensively verifying all participant lists and distribution logs. The M&E Coordinator will verify all participants receiving inputs through the project prior to distribution. They will also be responsible for collecting case studies and photos and writing up project progress reports. These materials will be collected and stored securely, with respect for the dignity of every participant and the protection of their data as the highest priority.

If the security situation in any of the target areas deteriorates, or movement or gathering restrictions are imposed for public health reasons, Afghanaid will conduct remote monitoring by telephone where access is not possible. The M&E Coordinator will report the findings to the M&E Manager based in Afghanaid's head office in Kabul, and the head office M&E team will in turn provide technical support where needed and make occasional field visits. Feedback will also be provided to the project manager and officers to allow for adaptive management and continuous improvement of project implementation. This includes continual monitoring of market functioning and accessibility by project staff throughout implementation to verify that the assistance delivered still meets the needs of participants as intended. Afghanaid has trained and experienced staff who will oversee reporting on project progress through ReportHub, and project staff will ensure timely monthly reports on this portal.

As described under activities above, technical monitoring will be conducted by project engineers and other project staff to track repair works' progress, provide technical recommendations to participants, and address any errors.

In addition to internal monitoring mechanisms, key components of the project will be overseen by selection and distribution committees which include community representatives. The distribution committees will visit project sites to see and speak with participants, which will provide participants with an opportunity to raise any complaints or concerns. Their feedback will be documented and used to inform adaptive management.

#### Activity 1.1.12

# **Standard Activity: Customized Activity**

#### Post rehabilitation monitoring:

Afghanaid will conduct post distribution and rehabilitation monitoring among a random sample of participants (15% of assistance recipients) in coordination with the targeted communities, to assess the quality of the repair works, determine the impact of the assistance, and solicit feedback and lessons learned; any lessons learned pertaining to the water points' repair standards will be shared with the cluster. PDM will be conducted after the completion of repair works and may consist of a combination of focus group discussions and a participant survey. Afghanaid will use the WASH cluster's PDM tools for this process, either by using the cluster's standalone tools or by incorporating cluster and RCCE-related questions into Afghanaid tools.

# Output 1.2

#### Description

Hygiene promotion and AWD awareness-raising sessions delivered to targeted households

#### **Assumptions & Risks**

- (1) The security situation in the proposed project areas remains manageable; security focal points in each of the offices and the head office security team carry out continuous monitoring of security developments in the targeted areas to ensure this remains the case.
- (2) Any natural and man-made disasters may prolong the emergency situation and may affect project implementation.
- (3) The target communities and local institutions are supportive of the project and access is granted by all stakeholders; project staff will conduct robust community mobilization activities at the outset of the project to ensure community understanding and acceptance of the project. Through the inception workshop, project staff will also explain the project objectives, activities and assistance modality to participating community leaders. Local community representatives will also be included in participant selection and distribution committees. (4) Local de facto representatives continue to allow access to the targeted areas and populations (including women) in order for assistance to be delivered and do not impose undue taxation on the distributing agency or participants; Afghanaid proactively engages de facto representatives, and project staff maintain close relationships with the targeted communities so that they are able to act as mediators in the case of access issues and conflict. Project staff also provide these communities with a robust orientation session explaining Afghanaid principles and underlining that no taxes should be paid on humanitarian assistance, and in the case of post-distribution taxation participants should immediately report this through the feedback channels in place.
- (5) The Covid-19 pandemic in the area remains contained; to mitigate this risk, project staff will raise awareness of hygiene and Covid-19 prevention guidelines during community mobilization and distribution activities, activities will be held in open air or in large enough spaces for participants to keep the required distance from one another, and PPE will be used by staff and participants throughout the project activities. In light of the WHO and Afghanaid Covid-19 guidance for distributions, staff will arrange special distribution times for vulnerable participants where needed, for instance to allow elderly people to avoid crowds.

#### Indicators

			End cycle beneficiaries			End cycle	
Code	Cluster	Indicator	Men	Women	Boys	Girls	Target
Indicator 1.2.1	WATER, SANITATION AND HYGIENE	# of households/families trained in hygiene promotion and AWD prevention	22,29 5	23,204	33,4 42	34,8 09	113,750

#### **Activities**

#### Activity 1.2.1

#### Standard Activity: Customized Activity

Orientations on hygiene:

The project's Hygiene promoters will carry out house to house visits to provide orientation to the community members. They will hold informal dialogue with family members on regular basis and talk to them about the best hygiene practices. They will try to enhance knowledge and understanding of disease transmission routes and prevention measures through improved hygiene practices.

#### Activity 1.2.2

#### Standard Activity: Customized Activity

Training on hygiene and AWD prevention:

The hygiene promoters will further train all the targeted participants on the use of good hygiene behavior, hand washing with soap and keeping drinking water safe at point of use including safe disposal of human excreta, and care and maintenance of WASH facilities. Hygiene promoters will focus in particular on behaviors and practices to avoid the transmission of AWD, such as use of appropriate sanitation facilities, safe excreta disposal, and handwashing and water treatment. This will be conducted in information meetings and gatherings so the community members feel free to ask any question and clarifications, or add any points and their concerns, which the project staff can address.

They will hold separate session for women and men according to communities' culture. Also printed leaflets and posters will be distributed to the participants during the sessions. Afghanaid will sensitise participants also to consider the safety of water at the point of use to ensure cleanliness standards are maintained from source to usage.

#### Activity 1.2.3

Standard Activity: WASH mass response and rapid intervention in outbreak hotspots through real-time epidemiological investigations by AWD/cholera transmission context Undertake regular shock chlorination campaigns of unprotected wells and networks, emergency water treatment plants and water trucking in last resort.

Receipt & Distribution of chlorine tablets and handwashing soaps:

The participant selection committees will make sure that only the most vulnerable people with the greatest needs are selected, and Afghanaid staff will pay particular attention to ensuring that participant lists prioritize the most vulnerable households, using the WASH cluster vulnerability criteria as well as any relevant criteria suggested by the target communities.

Once a selection of participants has been proposed, the selected participants will then be verified extensively by the committee and M&E staff through community visits to ensure that the most vulnerable members of the targeted communities are included in the final list. M&E and project staff will verify all participants before distribution takes place. Each participant selection list is then signed and endorsed by the committee members.

The project will arrange chlorine tablets and handwashing soaps items to WASH cluster specifications from UNICEF Mazar office and distribute to 98,800 targeted households, according to the WASH cluster guidelines. Afghanaid has already contacted UNICEF in this regard to support the project with the available elements of the WASH kits in their stock. The project and the distribution will be guided by a set of rights-based principles and Sphere Standards which have been and will be applied during planning and implementation of the interventions. All the project staff will be trained on rights-based principles and Sphere Standards in advance of their deployment to the field.

#### Activity 1.2.4

#### **Standard Activity: Customized Activity**

Regular monitoring and reporting:

Same as explained in the Activity 1.1.11 & 1.1.12 above.

# **Additional Targets:**

#### M & R

# Monitoring & Reporting plan

Afghanaid has a well-developed M&E framework which allows for close monitoring of implementation, tracking of progress against indicators and reporting of feedback to allow project management to address issues where they arise. Dedicated M&E staff oversee the day-to-day monitoring of project implementation and recording of data, including the full verification of all participants as well as distribution and post-distribution monitoring. They are given practical support for data collection and entry by project officers and technical support for reporting by the M&E team at the Afghanaid head office.

Data collection is overseen by M&E staff, but they will gather input from other project staff, local stakeholders and participants. The project

Page No : 10 of 32

participants and Afghanaid project staff will play a vital role in the on-site field monitoring of the project by providing feedback and reporting any apparent discrepancies. Meanwhile, the distribution committee, which is composed of community representatives and Afghanaid staff, attend and monitor all distribution activities.

M&E staff will also systematically collect their own data to measure progress against indicators. Aside from using the work plan as a tool to measure the project progress, an indicator tracking tool will also be developed by the head office M&E team that will be used for this purpose. The M&E team will also develop a post-distribution monitoring tool tailored to this intervention and monitor 15% of the targeted participants. Data collection methods will include distribution lists, direct observation of distribution activities and participant interviews and focus group discussions, including with women-only groups. Where access is impossible due to insecurity, weather conditions or Covid-19 related restrictions, M&E staff will gather data remotely through phone interviews as per OCHA recommendations. In addition to collecting participant feedback and quantitative data, the M&E team will also collect case studies and photographs.

M&E staff will compile the collected data in weekly and monthly reports, which will include both progress reports and field visit reports. These documents will be submitted to the project management team and used to inform periodic progress reviews and decision-making. In addition to the internal reports, Afghanaid will provide a project completion report to OCHA within a month of project completion, which will include key lessons learned, feedback from target communities, and recommendations for future programming. The project completion report will also cover the results of post-distribution monitoring as well as any complaints raised by participants and the actions taken to address these. Further, Afghanaid has trained and experienced staff who will report on project progress through ReportHub.

Workplan													
Activitydescription	Year	1	2	3	4	5	6	7	8	9	10	11	12
Activity 1.1.1: Project registration with relevant ministries:	2022												Х
The project's registration with the ministry of Economy and then MoU with the MRRD in Kabul and province is necessary before starting of the project. Hence, upon signing of the Grant Agreement, Afghanaid can start this process soon, and will assign a particular staff to follow up the registration of project and MoU signing process with them accordingly. It is expected that the project's registration and MoU process will take about 30-45 working days at the national and provincial levels.	2023	X											
Activity 1.1.10: Procurement and distribution of Water Filter Kits:	2022												
The participant selection committees will make sure that the most vulnerable people with the greatest needs are selected, and Afghanaid staff will pay particular attention to ensuring that participant lists prioritize the most vulnerable households, using the WASH cluster vulnerability criteria as well as any relevant criteria suggested by the target communities.  Once the selected participants list has been proposed, the selected participants will then be verified extensively by the committee and M&E staff through community visits to ensure that the most vulnerable members of the targeted communities are included in the final list. M&E and project staff will verify all participants before distribution takes place. Each participant selection list is then signed and endorsed by the committee members.  The project plans to identify and select 3,200 vulnerable households to receive Water Filter Kits from the project. The project will procure 3,200 Water Filters and	2023		X	X	X								
distribute 1 water filter for 1 households in the target communities. Our field staff has proposed this based on their discussion this with the community members in October.  Further, the project will also arrange chlorine tablets and handwashing soaps items													
to WASH cluster specifications from UNICEF Mazar office and distribute to 98,800 households, according to the WASH cluster guidelines. Afghanaid has already contacted UNICEF in this regard to support the project with the available elements of the WASH kits in their stock. Activity 1.1.3: Inception workshop: At the outset of the project, Afghanaid will organize an inception workshop in the target province to introduce the project to relevant stakeholders, including local community leaders and community members representing marginalized communities, as well as representatives from other NGOs, and orientate them on the project's objectives and activities. This workshop will serve as an initial meeting with all relevant stakeholders to ensure all parties are fully aware of the project implementation plans in the area, provide a space for dialogue about the project and its implementation, gather further feedback from local community representatives, and use that feedback to adjust the project and increase the communities' support for it. Community representatives will also be asked to cascade the information provided to their respective communities. In line with Covid-19 precautionary policies, staff and attendees will be required to follow relevant guidelines including hand washing and social distancing.	2022									X
Activity 1.1.4: Coordination with relevant stakeholders: Afghanaid will regularly report to and coordinate with local stakeholders, including	2022									Х
NGOs active locally, at regular provincial meetings, on issues which will include avoiding duplication of efforts/geographic coverage areas, participant selection, progress and challenges. Afghanaid staff will also take part in relevant regional cluster meetings. These meetings will ensure that Afghanaid and local stakeholders are able to maximize opportunities for collaboration and avoid duplication. Afghanaid will also hold regular meetings with community representatives and marginalized community members, which will provide an additional avenue of dialogue between Afghanaid and members of the target communities. Through these meetings, communities will be able to deliver feedback to Afghanaid to inform adaptive management of the project, and Afghanaid is able to report back to community members how past feedback has been addressed. Afghanaid will seek and refer to guidance from OCHA in managing relationships with the local authorities. Afghanaid will also coordinate with AWAAZ to ensure the AWAAZ team is informed of key project details and is able to respond to any queries from project participants. Afghanaid will share anonymized feedback, according to shared data points, to the AAP WG for collective feedback advocacy and analysis as well.	2023	X	X	X	X	X	X			

Activity 1.1.5: Community mobilization and sensitization: Afghanaid will conduct sessions in all targeted communities to explain the	2022						
intervention, its objectives, and the participant selection criteria and process. Project staff will raise awareness about vulnerability and vulnerable groups in the communities, reasoning behind prioritizing these groups such as female-headed households and households with dependent children head in the intervention.	2023	X	X				
This is done to ensure that the targeted communities understand the project, and to strengthen community acceptance. Project staff will also ask community members if the project exclude any particularly vulnerability which should be considered, so that the project could provide the required support where needed.							
Aside from providing communities with information about the project, the community mobilization sessions will also offer community members a space to provide input and feedback. The communities will be provided with an orientation on the various feedback channels available to them, such as the CDC grievance handling mechanism (where CDCs are operational) and the participant selection and distribution committees, and they will be provided with the contact details of project staff, Afghanaid senior management (in case of safeguarding incidents and whistleblowing procedures), and AWAAZ. Project staff will also provide the target communities with an orientation on Afghanaid's safeguarding and whistleblowing policies and procedures. Further, the project staff will regularly ask project participants about what information on the project and assistance they would like to know and what their trusted sources are for receiving that information. Afghanaid will provide requested, clear information through the people and communication channels they prefer and in the languages and formats they want. Participants will be told they have a right to ask questions and obtain information.							
As part of the community mobilization sessions, Afghanaid will consult with communities on the identified projects for repairing, project beneficiaries, their selection, water kits and hygiene kits distribution plan, including the number and size of the assistance, and any protection concerns the communities have around the project planned inputs. Where communities raise concerns about potential protection risks during the cold winter months due to heavy snowfall, Afghanaid will consult with the cluster on revising the implementation and distribution plan. Afghanaid will also inform the target communities on the implementation and water sources' restoring mechanism chosen for this project to ensure community acceptance of this system.							
In line with guidelines on health, safety and Covid-19 prevention, all community mobilization sessions will be held outdoors where possible, or in large enough spaces to allow participants to keep the required distance from one another. Project technical officers will start each community session by going over important guidelines for Covid-19 prevention, including the importance of hand washing, mask wearing and social distancing. All participants will be instructed to comply with these guidelines throughout all project activities.							

Activity 1.1.6: Establishment of selection and distribution committees:	2022						
To ensure full transparency and fairness in the selection of participants, distribution of inputs and implementation of the project, Afghanaid will establish a participant selection and distribution committee which will each consist of local community members (e.g. CDC members, religious leaders, and/or other trusted community members such as local teachers and traders) as well as Afghanaid staff. Other stakeholders including local authorities may also be included in the committees in order to engage their support for the project; participant selection in accordance with the criteria however remains the duty and responsibility of Afghanaid, and no undue influence over community or participant selection will be accepted. Members of the two committees may overlap or may be entirely separate, but Afghanaid will form the committees so that both include representatives of the target communities, and that the committee membership reflects the diversity of the target communities in terms of age, gender, ethnicity and other relevant characteristics. Afghanaid will also advocate for women to be fairly represented on these committees. Committees' members will be instructed on Afghanaid's SOPs for humanitarian assistance delivery, and must respect the principles of these SOPs including Afghanaid's guidelines for the protection of participant data. Ideally, Afghanaid forms the participant selection/distribution committees at the district level.	2023	X	X				
The participant selection committees established by Afghanaid will select participants, facilitating the identification of the most vulnerable persons to be selected for assistance by agreeing on a set of participant selection criteria and verifying all selection lists. The selection criteria will follow Cluster priorities where applicable, focusing specifically on women or child-headed households, households with a dependency ratio of 8 or more, households without a reliable income, and households which have one or more members with a disability or chronic illness. These criteria will form the basis of the participant selection tool which will be agreed upon by the committee. Meanwhile, duplication will be prevented through coordination with other agencies operating locally.							
The distribution committees established by Afghanaid will monitor all distribution activities and project implementation, ensuring transparency and accountability in the process by observing all distributions and implementation and reviewing the records. Further, the committee members will also contribute to monitoring local security dynamics within their area.							
In addition to the above, both committees will support the project to gather feedback from participants during distributions, including managing any complaints and mitigating any conflict arising from the intervention, by acting as focal points for participants. Any feedback collected this way will be gathered by the M&E Coordinator in regular progress reports or raised directly with project management by committee members in case of urgent follow-up. The community representatives on the committees will be tasked with updating their respective communities on how their feedback has been implemented, and will provide community members with an additional avenue of communication with project management.							
Conversely, to ensure that the committees' power in the participant and distribution processes does not lead to abuse, the target communities are provided with the contact details of project management, Afghanaid senior management (for safeguarding incidents and whistleblowing procedures), and the confidential helpline AWAAZ. Where abuses by committee members are raised, Afghanaid will take direct action to protect those affected from harm and remove the committee member(s) involved from their position.							

Activity 1.1.7: Participant selection for water kits, verification and re-assessment of communities' water sources:	2022							
After the participant selection committees are established, its members will start the participant selection process using a set of selection criteria agreed by the committees beforehand. The participant selection committees established by Afghanaid will select participants, facilitating the identification of the most vulnerable persons to be selected for WASH kits assistance by agreeing on a set of participant selection criteria and verifying all selection lists. The selection criteria will follow Cluster priorities where applicable, focusing specifically on women or child-headed households, households with a dependency ratio of 8 or more, households without a reliable income, and households which have one or more members with a disability or chronic illness. These criteria will form the basis of the participant selection tool which will be agreed upon by the committee members. Meanwhile, duplication will be prevented through coordination with other agencies operating locally.	2023	X	X	X				
Once a selection of participants has been proposed, the selected participants will then be verified extensively by the committee and M&E Coordinator through community visits to ensure that the most vulnerable members of the targeted communities are included in the final list. M&E and project staff will verify all participants before distribution takes place. Each participant selection list is then signed and endorsed by the committee members.								
Further, the project technical team will conduct another assessment of the target areas to verify the status of the identified water sources and the improvements they require. The engineers will conduct the assessment to identify any required repair works and will be also regularly visiting the target areas to further check for the communities' water supply facilities and provide the required support to them during the winter and spring period.								
Communities' whose water sources have been damaged and are repairable will be prioritized for the activities. A rapid household survey will then be conducted to gather the demographic and vulnerability information required to provide suitable WASH kits assistance for each targeted households as well; such as the household size or cohabitation of multiple families will be used to know about number of person per households. The findings will be cross-checked through the use of focus group discussions, with separate FGDs for women and people with disabilities as applicable. The FGD findings can be used to adjust water sources designs where needed.								
Activity 1.1.8: Formation of WASH O&M committee:	2022							
Afghanaid will form and support 30 Community WASH committees with operation and maintenance training and tool kits for the water supply systems. Part of the responsibilities of these WASH Committees will be the sustainability of the WASH facilities in their area. Orientation and hands-on exposure to the operation and maintenance of the facilities will be provided to the WASH committees' members too. The WASH committees will select their members who will be trained on mechanical skills needed for rehabilitation of the water facilities. Their capacities will be built to manage community water infrastructure; and as a pre-condition to the partnership, community agreement will be secured for the creation of a contribution fund by user groups, to cover operational and maintenance (O&M) costs of the WASH facilities and systems, for which the project will provide O&M kits to each O&M committee. It is planned to form these 30 O&M committees and further train about 30 persons on O&M in these target areas.	2023	X	X	X				

Activity 1.1.9: Purification and Rehabilitation of existing water sources:	2022								
Afghanaid has conducted an assessment in October and has identified 16 water sources which require repairing support in these three targeted districts. Afghanaid plans to restore and construct these water sources in these target areas with appropriate repair and protection works during the winter and spring. In line with WASH guidelines, this project will be also looking for to rehabilitate other water sources in the area, which may require repairing support during the project timeframe and those maybe damage due to the freezing cold weather over the project period; so the project will take into consideration the cost of materials, equipment and transportation for each water point to restore the water supply to the target communities.	2023		K	X	X	X			
The recommended level of assistance and funding will also be adapted to the particular water point; Afghanaid will support the communities to mobilize local community solidarity in order to conduct and support the repair works of their water sources.									
The following activities are planned for the time being for supporting the water supplies in the targeted areas, however, the project technical team will be also visiting the targeted districts to identify any further water facilities which is/being damaged during the winter and spring time to be supported/fixed and restored.									
1) Water quality management: the project aims to provide potable water adhering to WHO standards to ensure water quality, by testing for microbial and bacteriological contamination. Afghanaid will conduct water quality laboratory tests accordingly. The water quality analysis will be done in all water points and also at household samples to ensure that the water is safe for human consumption. The project intends to undertake water quality management (tests and shock chlorination) in all the identified 16 water points (mentioned above) for the time being. Afghanaid will sensitise communities' members to consider the safety of water at the point of use to ensure cleanliness standards are maintained from source to usage.									
2) Protection of 16 identified Pipe Schemes supporting 4,606 households' potable water through repairing of their existing water sources; The assessment conducted by Afghanaid in October 2022 indicated that there is need for protection of existing water supplies in all Aybak, Hazrat-e-Sultan and Feroz Nakhchir districts. These water sources are included repairing of Pipe Schemes, Gravity System, Spring Water Gravity Network, and Solar System. A detailed BoQ is also prepared and attached in the "Documents" page for further reference. Also, in consultation with the targeted communities and MRRD technical staff at the provincial level these water supplies have been proposed for construction. This will ensure reliable access of these communities to safe drinking water over the winter and spring period.									
Throughout, technical monitoring will be conducted by project engineers and other project staff to check the existing communities' water sources in the area, also to track repair works' progress, provide technical recommendations to participants, and address any errors/needs.									
The project implementation will be carried out through Afghanaid's SOPs for humanitarian assistance. The selection committees will oversee the process of selection, identification, inputs' distribution and implementation of repair works, and this forms a key component of Afghanaid's transparency approach. All staff and communities will be instructed to comply with hygiene and Covid-19 prevention guidelines. Project staff will take special care in the selection of the distribution points, for water kits, to identify a large enough space to allow participants to keep the required distance from one another.									
Activity 1.2.1: Orientations on hygiene: The project's Hygiene promoters will carry out house to house visits to provide	2022	$\Box$							
orientation to the community members. They will hold informal dialogue with family members on regular basis and talk to them about the best hygiene practices. They will try to enhance knowledge and understanding of disease transmission routes and prevention measures through improved hygiene practices.	2023		K	X	X	Х			

Activity 1.2.2: Training on hygiene and AWD prevention: The hygiene promoters will further train all the targeted participants on the use of good hygiene behavior, hand washing with soap and keeping drinking water safe at point of use including safe disposal of human excreta, and care and maintenance of WASH facilities. Hygiene promoters will focus in particular on behaviors and practices to avoid the transmission of AWD, such as use of appropriate sanitation facilities, safe excreta disposal, and handwashing and water treatment. This will be conducted in information meetings and gatherings so the community members feel free to ask any question and clarifications, or add any points and their concerns, which the project staff can address.  They will hold separate session for women and men according to communities' culture. Also printed leaflets and posters will be distributed to the participants during the sessions. Afghanaid will sensitise participants also to consider the safety of water at the point of use to ensure cleanliness standards are maintained from source to usage.	2022 2023		X	X	X	X				
Activity 1.2.3: Receipt & Distribution of chlorine tablets and handwashing soaps:	2022									
The participant selection committees will make sure that only the most vulnerable people with the greatest needs are selected, and Afghanaid staff will pay particular attention to ensuring that participant lists prioritize the most vulnerable households, using the WASH cluster vulnerability criteria as well as any relevant criteria suggested by the target communities.  Once a selection of participants has been proposed, the selected participants will then be verified extensively by the committee and M&E staff through community visits to ensure that the most vulnerable members of the targeted communities are included in the final list. M&E and project staff will verify all participants before distribution takes place. Each participant selection list is then signed and endorsed by the committee members.  The project will arrange chlorine tablets and handwashing soaps items to WASH cluster specifications from UNICEF Mazar office and distribute to 98,800 targeted households, according to the WASH cluster guidelines. Afghanaid has already contacted UNICEF in this regard to support the project with the available elements of the WASH kits in their stock. The project and the distribution will be guided by a set of rights-based principles and Sphere Standards which have been and will be applied during planning and implementation of the interventions. All the project staff will be trained on rights-based principles and Sphere Standards in advance of their deployment to the field.	2023		X	X	X					
Activity 1.2.4: Regular monitoring and reporting:	2022									
Same as explained in the Activity 1.1.11 & 1.1.12 above.	2023	X	Х	Х	X	Х	Х			

# OTHER INFO

**Accountability to Affected Populations** 

Afghanaid's guiding principles of AAP are community consultation, transparency, participation of vulnerable groups, managing complaints and feedback. Our process of consultation prior to, during, and after the project, with all community members, is essential to promoting communities' ownership over the project.

Afghanaid through open-ended interviews, allowing them to tell us about the operating context as well as input into Afghanaid's prioritization and approach. The findings from discussions with communities' members in Aybak and Hazrat-e-Sultan in Samangan are incorporated in the design.

During implementation, a community selection committee, comprised of community representatives and Afghanaid will ensure the most crucial needs of the communities are addressed. The committee suggestion on the identified WASH infrastructures' lists which Afghanaid then do another verification too. Community mobilization sessions will also enable a dialogue with community members to explain the criteria for project's target and provide community with a chance to give input and feedback.

The people can raise feedback through a number of different channels, including their CDCs' grievance-handling mechanisms where CDCs are functioning. Involving local communities in managing disputes encourages their ownership over project implementation, keeps Afghanaid accountable to community-level institutions and ensures Afghanaid maintains its "Do No Harm" policy. The selection committee will help identify communities' concerns during the activities implementation, as its members are present throughout the project process and act as focal points for target communities to give feedback. Afghanaid also holds regular consultations with project target communities' members and makes adjustments to ensure implementation is as effective and safe as possible. Where communities raise feedback, Afghanaid project staff will provide them with updates on how their feedback is being addressed, either directly or through community representatives or selection committees. Afghanaid will appoint one male and one female staff member as client representatives who take feedback from participants, including sensitive SEA-related complaints.

The community mobilization sessions, as well as posters and verbal announcements at distributions will inform communities on who to contact in the event of alleged corruption, mismanagement and/or if delivered aid does not meet the promised quantity as well as how to report PSEA cases. The contact details of Afghanaid staff will be distributed in community, and participants will also be given a telephone number to contact, in accordance with the whistleblowing policy. The senior management team will be mandated to address immediately any complaints received. Where complainants agree, their anonymized data may be shared with AAP WG to inform their nationwide feedback mechanism. In line with the HCT-endorsed data sharing protocols, Afghanaid will not share participant data without their consent, and Afghanaid will only collect essential participant data and delete this data once audit requirements allow.

Afghanaid informs communities in the mobilization sessions about their rights, including their rights to ask questions, make a complaint and give feedback, and about our safeguarding and whistleblowing policies, which detail the measures in place to protect communities and individuals from abuse and maltreatment, including sexual exploitation, harassment, and bullying. The whistleblower policy will be posted in all relevant languages at the project location where all can see it. Afghanaid will also promote the toll-free, confidential helpline AWAAZ to participants during the sessions. Communities will be made aware of Afghanaid's code of conduct to ensure that stakeholders understand Afghanaid's expectation of the behavior of its staff and encourages participants to report any violations.

#### **Implementation Plan**

# Coordination with other Organizations in project area Name of the organization Environment Marker Of The Project Gender Marker Of The Project 3- Likely to contribute to gender equality, but without attention to age groups Justify Chosen Gender Marker Code Protection Mainstreaming

Page No: 19 of 32

Afghanaid's programs strictly adhere to 'Do No Harm' principles at every stage of implementation. Firstly, Afghanaid prioritizes the safety and dignity of participant communities and avoids any kind of harm to them, such as by training project staff and consultants on proper procedures for humanitarian assistance provision, and establishing gender balanced selection committees to monitor the safety of target communities throughout implementation. Where external parties, such as contactors, are brought in contact with participants, Afghanaid ensures that a male and female staff member and the selection committees are always present to monitor that the contact proceeds in a safe, dignified manner. Participating communities are always assisted by more than one staff member and at least one female staff member as client representatives who take feedback, including sensitive SEA-related complaints.

Secondly, project staff pay special attention to women, people with disabilities, and other vulnerable groups in participant selection and distribution to ensure their access to the project. After participant/communities selection lists are prepared by the selection committee, Afghanaid staff verify all selected participants and communities through extensive community visits to ensure that the most vulnerable members of the target communities are included. Staff explain the selection criteria to the target communities and gather their input on the most vulnerable groups in the community. During the inputs distribution process, project staff will bring participants with limited mobility back and forth to the distribution point as needed, so that they are able to claim their assistance, or project staff will bring the assistance directly to these participants' homes. Staff may arrange special distribution times for vulnerable participants with limited mobility as needed, or arrange distributions to their home. Taking into account that people with special needs are at higher risk of having their assistance diverted, vulnerable groups including women will participate in monitoring through representation in verification committees as well as through FGDs and other M&E efforts.

Thirdly, Afghanaid has a strong AAP approach and provides internal and external feedback mechanisms to ensure accountability to participants. All participating communities are given an orientation on these mechanisms at the start of the project, and details are posted at distribution points. All materials will be in languages and formats that participants say they prefer.

Fourthly, the intervention aims to build participating communities' self-protection capacity, empower participants to claim their rights and provide them with effective channels to do so. Afghanaid refers participants to local (CDC) grievance handling mechanisms (where these are operational), to strengthen the role of local community institutions. If someone wishes to do so confidentially they can contact the helpline AWAAZ, the contact details of which are shared with all communities. This helpline allows people to speak with a female agent, reducing the barriers for female participants to raise any issues they experience, including any SEA complaints. Afghanaid will work closely with relevant communities, relevant stakeholders (including NGOs and UN entities such as Afghanistan PSEA Task Force) to properly address complaints and ensure appropriate referrals for SEA victims.

Afghanaid's PSEA approach ensures that communities are oriented on Afghanaid's safeguarding and whistleblowing policies and procedures at the outset. Where safeguarding incidents are reported through any channel, senior management immediately assigns a committee to investigate, recommend appropriate action and update complainants on the handling of their complaints. Afghanaid operates with a zero-tolerance policy, and where staff are found to have committed any form of abuse, they are immediately removed from their post.

#### **Country Specific Information**

#### Safety and Security

#### **Access**

Afghanaid has numerous years of experience and a continuous presence in Samangan since 2000, including various past and ongoing projects in the target districts. We have a well-established office and strong relationships with community representatives and local influential elders in the target districts. In light of these relationships and Afghanaid's strong reputation in the communities, Afghanaid anticipates it will be able to implement the project without major access issues arising. Afghanaid has not faced access challenges in the target areas in the past. Where access challenges have occurred elsewhere in the country, Afghanaid has successfully worked to reestablish access by engaging local community leaders and local authorities such as NGO commissioners. This has been possible through keeping close contact with communities, continuously strengthening community acceptance, providing channels for and responding to complaints and feedback, having transparent participant selection and delivery modalities, and ensuring that enough time is spent on community mobilization, as well as by maintaining good working relationships with local stakeholders and authorities.

Afghanaid has a dedicated security team at the head office in Kabul responsible for closely monitoring security developments, including potential factors influencing humanitarian access, in all its working provinces, and identifying and implementing mitigation measures where needed. Since Afghanaid has implemented programming in Samangan (including target districts) for many years, the local offices already have robust and well-functioning security protocols, procedures and infrastructure in place. The security focal points at the local offices have a thorough understanding of local security dynamics, are experienced at continuously monitoring security developments and are able to report concerns rapidly to project and security management, which allows Afghanaid to act quickly in the face of potential security concerns and access constraints.

Nevertheless, potential threats to access remain, and these primarily include criminal activity and taxation demands. Afghanaid staff on the ground report that the influence of armed groups in the target areas is currently limited. To date, Afghanaid has not experienced taxation demands or other issues with armed groups in the target areas; where groups have restricted Afghanaid's access elsewhere in the country, community engagement has proven a successful way of resolving this issue. Afghanaid will inform communities about their important role in supporting Afghanaid to manage threats, and instruct them to immediately report any demand of taxes on the assistance delivered or any other armed group activity to Afghanaid. Where taxation demands or conflict activity occur, Afghanaid will suspend the project to fully evaluate the situation and decide on a plan of action. Afghanaid's approach is to mobilize its close ties to local community leaders and ask them to act as mediators. Community leaders then negotiate with armed groups to stop demanding taxes on humanitarian assistance or suspend fighting so that project participants are able to collect their assistance and project's remaining work is completed. If access to a particular distribution/project implementation point remains restricted for a longer period of time, Afghanaid will work to identify an alternative, secure distribution point in consultation with OCHA and local community representatives to allow participants to safely collect their water kits. In addition to positioning communities as mediators, Afghanaid also engages local authorities directly, and coordinates closely on access issues with other humanitarian actors through the HAG and ACBAR.

(International & national hire, director, Advisor & assistant levels staff based in Kabul - head office); The project will form a significant part of the organization's humanitarian portfolio and as such it will require significant involvement at a strategic level to ensure its successful implementation.

The Managing Director and Executive Assistant are expected to have substantial involvement in this project to provide strategic support and ensure that the project aims align with the organization's long term strategy and the country strategy. The Managing Director is also involved in senior-level coordination, including access negotiation processes, with government, NGOs and other key stakeholders which ensures the smooth implementation and sustainability of the project.

Further, the nature of the operating environment in Afghanistan, and the target locations more specifically, requires field teams to draw on the expertise and insights of the Head Office based Security Team in order to manage security risks well. The Head of Security will work directly with the project implementation teams in the project areas to provide guidance on security matters in order for them to quickly adapt to the ever changing security situations, which is especially crucial due to the large volume of cash and inputs to be distributed under this response.

In light of the above, the costs for the mentioned positions qualify as shared costs. Shared costs which contribute to the running of a project or activity are apportioned among those activities. The apportionment between benefitting projects is done using a base which accurately measures the benefits provided to each award or activity. Afghanaid needs to recover all costs to implement projects particularly 8% as a direct charge and 7% as an overheads.

The breakdown of this line is found in the Documents page; please see Tab "HO SupportBreakdown(1.11-1.14)" in the uploaded excel sheet "Annex-1 Budget&BoQs-final.xlsx" in this regard.

Afghanaid's inability to recover full costs from projects creates a deficit. This deficit will have to be met by Afghanaid's own resources, unfortunately, Afghanaid does not have sufficient reserves to meet such deficits and our unrestricted funds are not limitless. Our inability to recover costs in full jeopardizes the sustainability and going concern of Afghanaid.

The initial labour cost distribution is based on budgeted time while actual cost charged to this project will be based on level of efforts (LOE). From time to time Afghanaid undertake a process of confirming/rationalizing the actual time spent on each project using level of effort sheets in order to ensure that the cost allocated is reasonable. And the cost of \$9,688 is estimated based on Fair Share Cost Principle.

1.12 Programme Technical Support S 1 13,02 6 11.00 8,599.15

The project will form a significant part of the organization's humanitarian portfolio and as such it will require significant involvement at a strategic level to ensure its successful implementation. And nature of the operating environment in Afghanistan, and target locations more specifically, requires field teams to draw on the expertise and insights of the Head Office based technical team in order to manage well.

The Programs department at the Head Office (National hire, director, manager & assistant levels staff based in Kabul) is responsible for providing administrative and technical oversight and support for the implementation of the program. Program Technical Support positions include the Program Director, Sector Specialists and the Monitoring & Evaluation Manager who will work directly with the project team to ensure alignment of program goals, program quality and success. The M&E Manager in particular will provide significant support to the project and for the participant verification, regular follow up, and post-distribution monitoring processes this project will require.

In light of the above, the costs for the mentioned positions qualify as shared costs. Shared costs which contribute to the running of a project or activity are apportioned among those activities. The apportionment between benefitting projects is done using a base which accurately measures the benefits provided to each award or activity. Afghanaid needs to recover all costs to implement projects particularly 8% as a direct charge and 7% as an overheads.

The breakdown of this line is found in the Documents page; please see Tab "HO SupportBreakdown(1.11-1.14)" in the uploaded excel sheet "Annex-1 Budget&BoQs-final.xlsx" in this regard.

Afghanaid's inability to recover full costs from projects creates a deficit. This deficit will have to be met by Afghanaid's own resources, unfortunately, Afghanaid does not have sufficient reserves to meet such deficits and our unrestricted funds are not limitless. Our inability to recover costs in full jeopardizes the sustainability and going concern of Afghanaid. The initial labour cost distribution is based on budgeted time while actual cost charged to this project will be based on level of efforts (LOE). From time to time Afghanaid undertake a process of confirming/rationalizing the actual time spent on each project using level of effort sheets in order to ensure that the cost allocated is reasonable. And the cost of \$8,599 are estimated based on fair share cost principals.

1.13 Operations Support S 1 61,13 6 6.03 22,120.38

(International & national hire, director, manager, coordinator, officer & assistant levels staff based in Kabul - head office); This line covers support from the Operations department, which includes the Finance, Human Resources and Logistics teams. Finance Management Support functions provide technical support and oversight of the Provincial Operations Coordinator, Project Coordinator and Project Officers to ensure consistency between the project and organizational reporting systems and processes. The head office based Finance team ensures that the field team has the capacity and the tools to support project management in monitoring the financial aspects of the project, and makes sure that robust financial controls are in place and organizational standards are adhered to. The Human Resources Management Support functions ensure timely recruitment and training of project staff. The HR team oversee training of staff in relevant organizational standards and policies, including safeguarding, antifraud measures and beneficiary feedback mechanisms, all of which are essential policies and procedures for the project team to be trained in ahead of the implementation of this response. The Logistics Support functions ensure timely procurement of project materials and supplies in line with Afghanaid procurement standards and procedures.

The project will form a significant part of the organization's humanitarian portfolio and as such it will require significant involvement at a strategic level to ensure its successful implementation. And nature of the operating environment in Afghanistan, and target locations more specifically, requires field teams to draw on the expertise and insights of the Head Office based technical team in order to manage well.

In light of the above, the costs for the mentioned positions qualify as shared costs. And this \$22,120.38 is estimated based on fair share cost principals. Shared costs which contribute to the running of a project or activity are apportioned among those activities. The apportionment between benefitting projects is done using a base which accurately measures the benefits provided to each award or activity. Afghanaid needs to recover all costs to implement projects particularly 8% as a direct charge and 7% as an overheads.

The breakdown of this line is found in the Documents page; please see Tab "HO SupportBreakdown(1.11-1.14)" in the uploaded excel sheet "Annex-1\_Budget&BoQs-final.xlsx" in this regard.

Afghanaid's inability to recover full costs from projects creates a deficit. This deficit will have to be met by Afghanaid's own resources, unfortunately, Afghanaid does not have sufficient reserves to meet such deficits and our unrestricted funds are not limitless. Our inability to recover costs in full jeopardizes the sustainability and going concern of Afghanaid.

The initial labour cost distribution is based on budgeted time while actual cost charged to this project will be based on level of efforts (LOE). From time to time Afghanaid undertake a process of confirming/rationalizing the actual time spent on each project using level of effort sheets in order to ensure that the cost allocated is reasonable.

1.14 Grant Management and Reporting Support S 1 50,62 6 6.50 19,744.01

(International & national hire, director, manager, coordinator, officer & assistant levels staff based in Kabul - head office); In order to ensure that the contract is effectively managed, Afghanaid has a Program Development and Resource Mobilization Department responsible for managing the relationship with the Contractor/Donors as well as keeping track of and reviewing contractual obligations, project deliverables and progress reports, such as reporting on ReportHub. The department also ensures program sustainability by maintaining key stakeholder relations and securing their interest in the project outcomes. This forms a significant part of the organization's humanitarian portfolio and as such it will require significant involvement at a adjective level to ensure its successful implementation. And nature of the operating environment in Afghanistan, and target locations more specifically, requires field teams to draw on the expertise and insights of the Head Office based technical team in order to manage well. Hence, the cost of \$19,744 are estimated based on fair share cost principals.

And the breakdown of this line can be found in the Documents page; please see Tab "HO SupportBreakdown(1.11-1.14)" in the uploaded excel sheet "Annex-1\_Budget&BoQs-final.xlsx" in this regard.

In light of the above, the costs for the mentioned positions qualify as shared costs. Shared costs which contribute to the running of a project or activity are apportioned among those activities. The apportionment between benefitting projects is done using a base which accurately measures the benefits provided to each award or activity. Afghanaid needs to recover all costs to implement projects particularly 8% as a direct charge and 7% as an overheads.

Afghanaid's inability to recover full costs from projects creates a deficit. This deficit will have to be met by Afghanaid's own resources, unfortunately, Afghanaid does not have sufficient reserves to meet such deficits and our unrestricted funds are not limitless. Our inability to recover costs in full jeopardizes the sustainability and going concern of Afghanaid. 7.2	Internet costs	S	1	650.0 0	6	35.00	1,365.00		
	Internet connectivity is essential for the project staff to communicate with Afghanaid's head office and provincial offices durin project implementation, as well as for data entry; and project progress reporting. A fair shared cost allocation for the Internet charges of target districts budgeted in the project. The unit cost is re-calculated based on current resources and number of projects in the target districts. The project will contribute 35% to internet costs in Aybak, based on Afghanaid's cost sharing principle.								
	Only Aybak office cost is budgeted, because the project staff will be using Aybak office for their programme related visits, consultations and meetings; the project team will be also reporting to Provincial office and the project staff will be spending most time in Aybak for the project related such as financial documents, reports, and follow up of the project progress is being done from the Aybak office as well. Hence, a 35% of this office's internet is budgeted and the project supports three targeted districts.								
	Based on a cost sharing principle applied across Afghanaid's preflected in this budget line will be allocated to office in Aybak in an lower unit cost for efficiency reasons budgeted to support and charged to this project and based on the share charging policy. The unit cost is calculated based on current expenses for the transfer one, however, as new planned projects are approved, the	in Sama II three i arget di	ingan. 7.3	Office rent	S	1	340.9 1	6	35.00	715.91		
	The nature of the project will require presence in the area; thus a fair percentage of each field office's rental cost per month is charged. This will cover cost related to office's premises and etc. to accommodate project staff, equipment, and other assets. This is a percentage calculation of cost based on the expected number of active projects & space requirements for staff under each project. Only average and percentage costs for the target offices budgeted.  Only Aybak office cost is budgeted, because the project staff will be using Aybak office for their programme related visits, consultations and meetings; the project team will be also reporting to Provincial office and the project staff will be spending most time in Aybak for the project related such as financial documents, reports, and follow up of the project progress is being done from the Aybak office as well. Hence, a 35% of this office's rent is budgeted and the project supports three districts. Based on a cost sharing principle applied across Afghanaid's portfolio of programmes, Afghanaid anticipates that the funds reflected in this budget line will be allocated to office in Aybak in Samangan. This is a small contributions in percentage, where as an lower unit cost for efficiency reasons budgeted to support all three target districts from there. And the actual expenses will be charged to this project and based on the share charging policy.
