Description	<p>The primary aim of this project is to enhance and sustain Uganda's weather observation network by improving its capacity to generate and disseminate essential observational data, which is crucial for enhancing weather forecasts and climate services, multisectoral decision-making, and planning for the benefit of all.</p> <p>The project components are:</p> <p>Component 1: Enhancement of UNMA’S Institutional and Human Capacity</p> <ul style="list-style-type: none">The objective of this component is to establish the capability to operate and maintain the observing network. This includes conducting national consultations with CSOs and other relevant stakeholders, as well as developing the necessary institutional capacity to operate the GBON network and enhancing the human capacity needed to operate the GBON network. <p>Component 2: Rehabilitation and Construction GBON Infrastructure</p> <ul style="list-style-type: none">This component comprises investments in the acquisition and installation of observation infrastructure and telecommunications. It encompasses the upgrading and improvement of land-based stations and related equipment, ICT systems, data management systems, and standard operating practices. Additionally, it includes the installation of new upper-air stations, enhancement of existing upper-air stations and related equipment, ICT systems, data management systems, and standard operating practices. <p>Component 3: Uganda Network Compliance with GBON Requirements</p> <ul style="list-style-type: none">This section encompasses the expenses incurred during the commissioning phase for the land-based stations and upper air stations that are part of the Global Basic Observing Network (GBON). This includes the costs associated with ensuring compliance with the country-specific standards for operations and maintenance, as well as data sharing verification by the World Meteorological Organization (WMO) Technical Authority. <p>The project is part of the Systematic Observations Financing Facility (SOFF), a mechanism that facilitates and expedites the gathering and dissemination of critical surface-based weather and climate observations, in accordance with international requirements, to enhance the quality and availability of weather forecasts, early warning systems, and climate services across all strata of society. The recipient of the project is the Uganda National Meteorological Authority (UNMA), while the Islamic Development Bank (IsDB) and The Royal Netherlands Meteorological Institute (KNMI) serve as the implementing entity and peer advisor, respectively.</p>
