

Investment Phase: Annual Narrative Report

Chad Year 1

Systematic Observations Financing Facility

Weather and climate data for resilience

General Information

| Country | Chad | | | | | | | | |
|-------------------------------------|---|--|--|--|--|--|--|--|--|
| Implementing Entity | World Food Programme (WFP) | | | | | | | | |
| Agreement effectiveness date | 19 June 2025 | | | | | | | | |
| Duration | 60 months | | | | | | | | |
| Anticipated end date | 01 November 2029 | | | | | | | | |
| Reporting period | From: 01 November 2024 To: 31 January 2025 | | | | | | | | |
| Approved amount | USD 6,980,084.00 | | | | | | | | |
| Disbursed amount | USD 4,511,558.80 | | | | | | | | |
| Signature of Implementing Entity | Sarah Gordon-Gibson C. Country Director and Representative | | | | | | | | |

Summary

Between 1 November 2024 and 31 January 2025, the SOFF Investment Phase in Chad achieved critical foundational milestones. The project was officially launched in January 2025 through a high-level ceremony followed by a five-day technical workshop that gathered key stakeholders to finalize the implementation roadmap, clarify institutional roles, set up governance mechanisms, and agree on long-term sustainability and performance indicators. The event received broad national media coverage, enhancing public visibility and stakeholders' engagement. On the operational side, funds were successfully disbursed to the Country Office, and collaboration with ANAM (Agence Nationale de la Météorologie) the procurement plan of meteorological equipment was initiated. To fast-track the procurement process, WFP Headquarters has been working in close coordination with UNDP on the development of equipment specifications. The Long-Term Agreement process is nearing completion, and the UNDP procurement team is expected to launch the final technical specifications by early April, which will allow for significantly faster and more streamlined procurement.

One stakeholder workshop was held with 28 percent female participation, far exceeding the Year 1 target of 5 percent, reflecting strong early progress on gender inclusion. Following an updated review of the national meteorological network, ANAM showed that 11 of the originally planned stations had already been rehabilitated by other projects (including PNA) and are now operational. These stations are already

contributing data to the WMO WIGOS Data Quality Monitoring System (WQDMS). In parallel, with the support of the WMO Africa Regional Office, ANAM successfully deployed a WIS 2.0 Box and added about 19 stations to the WIGOS system, enhancing real-time data sharing and global data integration. Meanwhile, eight stations were identified as requiring major rehabilitation and 14 as needing minor improvements, while the status of the remaining stations is unchanged from the SOFF readiness phase. Due to these developments, ANAM and the peer advisors have launched a new technical assessment of the Automatic Weather Stations to reassess needs and update WFP on the revised list of equipment and spare parts. Some of the 11 alreadyrehabilitated stations will be replaced by new candidates, following consultations between ANAM and the peer advisors. As a result, the total number of GBON-compliant stations by the end of the project is likely to exceed the original SOFF target of 33, strengthening Chad's meteorological infrastructure and compliance with global standards. These updates underscore the importance of continuous technical validation and stakeholder coordination to ensure effective and adaptive implementation. While project implementation is still ramping up, the groundwork laid during this period positions it well for progress in the upcoming quarters.

Progress of implementation

Gender

Please indicate how the Gender Policy of your organization (Implementing Entity) was applied to SOFF Operations.

Gender equality is a cross-cutting priority in the implementation of the SOFF Investment Phase. The project has taken concrete steps to promote the meaningful participation of women across planning and implementation processes. During the launch workshop in January 2025, women made up 28 percent of participants, significantly exceeding the Year 1 target of 5 percent. Gender targets are systematically embedded in capacity development activities, including training of ANAM staff and project steering committees, with a commitment to reach 33 percent female participation in senior management and technical trainings by 2029. The project aligns with SDG 5.5 by promoting women's leadership in public service and aims to ensure gender-disaggregated reporting throughout implementation.

Social and environmental safeguards

Please indicate how environmental and social safeguards standards are observed in the execution of activities.

The project follows WFP's Environmental and Social Safeguards Policy, ensuring activities are designed and implemented with minimal environmental impact and strong consideration of social dynamics. Site selection for new or rehabilitated meteorological stations is guided by screening criteria to prevent adverse environmental impacts, particularly in ecologically sensitive or conflict-prone zones. Additionally, targeted community engagement is planned with local leaders and security actors to raise awareness about the purpose of meteorological equipment and to prevent misunderstandings. Priority is given to rehabilitating existing infrastructure to reduce waste, and all procurement and deployment follow international safety and sustainability standards.

Civil society and private sector participation

Please indicate any engagements to date with civil society and private sector during Investment Phase implementation.

The project engaged civil society organizations and private sector stakeholders during the launch and planning phase. In the initial stakeholder workshop held in January 2025, consultations included representatives from national and regional CSOs, technical institutions, and private actors active in the climate and development sectors. Women represented 28 percent of participants in these consultations. These interactions helped define roles, surface implementation risks, and ensure a shared understanding of the roadmap. Continuous engagement is planned throughout the

project's implementation, particularly in capacity development and awareness-raising efforts.

Complementary financing and leverage

Please indicate any complementarity with ongoing and future projects/programmes with other climate funds.

The SOFF Investment Phase is complementary to other ongoing initiatives targeting meteorological and climate resilience systems. Several of the stations initially targeted for rehabilitation under SOFF were recently upgraded through other donor-funded initiatives, allowing resources to be reallocated to underserved areas. Additionally, the close collaboration between WFP and UNDP on the development of equipment specifications, leveraging UNDP's procurement mechanisms, demonstrates strong operational synergy. The project also aligns with the Early Warnings for All (EW4All) initiative and benefits from technical guidance by the WMO and GeoSphere Austria, serving as peer advisors.

Implementation of grievance redress mechanism

If applicable, please provide description of any issues or complaints received, along with the current status of their resolution.

As of the end of the reporting period, no grievances or complaints have been received in relation to the SOFF Investment Phase activities. The project will continue to apply WFP's standard complaint and feedback mechanisms, ensuring that all stakeholders, including communities where infrastructure will be deployed, have access to safe and responsive channels to express concerns or suggestions.

Success stories

Please share any success stories and links to news and publications relevant to Investment Phase implementation.

A key early success was the national launch of the SOFF project in January 2025, which was widely covered by national media and brought together stakeholders from across government, civil society, and technical partners. Another notable achievement was the identification, through coordination between WFP, ANAM and peer advisors, of 11 stations previously targeted under SOFF that had already been rehabilitated and were contributing to WMO's WIGOS system. This allows for the reallocation of SOFF resources to additional high-priority sites and will likely increase the number of GBON-compliant stations beyond the originally anticipated 33. These early wins illustrate the

project's adaptive management approach and the value of strong institutional collaboration.
