Requesting Organization : United Nations Children's Fund Allocation Type : Reserve Allocation 1 **Primary Cluster** Sub Cluster Percentage NUTRITION Project Title : Therapeutic supplies for the management of children with Severe Acute Malnutrition (SAM) Allocation Type Category : Core pipeline **OPS** Details **Project Code :** SSD-17/H/103664 Fund Project Code : SSD-17/HSS10/RA1/N/UN/7627 Cluster : Nutrition Project Budget in US\$: 1,025,003.83 Planned project duration : 12 months **Priority:** Not Applicable Planned Start Date : 01/01/2018 Planned End Date : 31/12/2018 Actual Start Date: 01/01/2018 Actual End Date: 31/12/2018 **Project Summary :** This project will support procurement, preposition, distribution and storage of life-saving nutrition

supplies and equipment in targeted locations. These supplies include therapeutic milk such as F75 and F100 for the management of severe acute malnutrition with medical complication in stabilization centres across the country and the provision of RUTF to targeted outpatient therapeutic programme facilities in 5 counties in former Northern Bahr el Ghazal and Warrap states.

Direct beneficiaries :

Men	Women	Boys	Girls	Total
0	0	3,866	4,012	7,878

Other Beneficiaries :

Beneficiary name	Men	Women	Boys	Girls	Total
Children under 5	0	0	3,866	4,012	7,878

Indirect Beneficiaries :

Indirect beneficiaries are caregivers of SAM children who bring their children to the nutrition services. These indirect beneficiaries will receive key messages on proper handling of RUT. moreover, they received key messages and counseling of optimum IYCF practices.

Catchment Population:

- The target catchment population covers 5 counties that includes;
- 1. NBeG Aweil East, Aweil Center and Aweil North,
- 2. Warrap Twic and Gogreal West.

Link with allocation strategy :

The primary focus of the project is to provide life saving nutrition supplies to ensure treatment of severe acute malnutrition among boys and girls under the age of 5 years. A total of five counties located in former NBeG and Warrap states will be targeted. UNICEF works with partners in the targeted counties to provide nutrition services that includes outpatient and inpatient services. To ensure quality of SAM treatment services, UNICEF and partners will strengthen the capacity of government and NGO partners through CMAM and MIYCN rollout trainings. Being cluster led, UNICEF will use various implementation strategies including indirect through partners and direct service delivery mechanisms through the Rapid Response Mechanism (RRM) where and when applicable.

Sub-Grants to Implementing Partners :

BACKGROUND

1. Humanitarian context analysis

As per the recent IPC report (September 2017), 6 million people (56% of the total population) estimated to be severely food insecure, on top of which 40,000 are in Catastrophe (IPC Phase 5) and 2 million are facing Emergency (IPC Phase 4) food insecurity. Post-harvest gains in October-December 2017 are expected to reduce the number of severely food insecure people to 4.8 million (45% of the total population), with 25,000 in IPC Catastrophe phase. However, an anticipated earlier than normal start of the lean season will result in an estimated 5.1 million (48% of the total population) people being classified as severely food insecure in January-March 2018, with 20,000 in IPC phase "Catastrophe".

According to the current IPC, acute malnutrition has worsened compared to the same period last year. Populations in Renk, Upper Nile, Twic, Warrap State and the Greater Baggari area in Wau have extreme Critical levels of acute malnutrition, while 31 counties in former states including Lakes, Northern Bah el Ghazal, Unity, parts of Jonglei, Western Bahr el Ghazal and Eastern Equatoria, show Critical levels of acute malnutrition. The increase in acute malnutrition is attributed to severe food insecurity, widespread insecurity, displacement, poor access to services, high morbidity, extremely poor diets and poor sanitation and hygiene. Levels of acute malnutrition were expected to improve marginally in September-December 2017 due to seasonal availability of local production, increased availability of fish and milk at the household level, and seasonal improvement in access to markets and services.

2. Needs assessment

UNICEF with partners have been monitoring the nutrition situation through various nutrition information data sources namely Nutrition SMART Surveys, nutrition programme data/reports, Food Security and Nutrition Management System (FSNMS) and the integrated Rapid Needs Assessment (IRNA). These surveys are targeting children under-five who are the most vulnerable. UNICEF leads the Nutrition Information Working Group (NIWG) under the umbrella of nutrition cluster. NIWG provide technical support to implanting partners through reviewing and validation of nutrition surveys.

To date, total of 43 SMART nutrition surveys have been conducted of which 39 of them were validated whereas the remaining four are under validation process. In addition, 32 out of the 39 assessments have GAM rates above the 15% emergency threshold. The September IPC analysis released on 31st October 2017 painted a blink picture of the country food security situation especially during the harvest period when households are expected to consume their own produce. The IPC estimates about 6 million people (56% of the total population) to be severely food insecure in September 2017 out of which 40,000 are in Humanitarian Catastrophe. The pattern of caseload is associated with seasonal patters and consumption of nutrition supplies is also associated depends on the seasonal caseloads.

3. Description Of Beneficiaries

The primary target beneficiaries will be children (both boys and girls) between 6 and 59 months suffering from severe acute malnutrition in 5 counties in former NBeG and Warrap states. Severe acute malnutrition is a major cause of death in children under 5, and its prevention and treatment are critical to child survival and development. Children with severe acute malnutrition are nine times more likely to die than well-nourished children. These deaths are the direct result of malnutrition itself, as well as the indirect result of childhood illnesses like diarrhea and pneumonia that malnourished children are too weak to survive.

The targeted beneficiaries will identified through anthropometry measures. Children with MUAC <11.5 and/or WFH <-3z-score and/or oedema will be admitted into the outpatient therapeutic programmes (OTPs) and those with medical complications will be admitted into inpatient programme (SCs).

4. Grant Request Justification

UNICEF being the lead for nutrition supplies pipeline in the country will be procuring therapeutic supplies and equipment in the country. As per the 2018 HRP, total of 209,140 SAM children 6 to 59 months are targeted out of which the nutrition supply for 7878 (3.766% of annual target) will be covered through this project. Moreover, UNICEF will procure other supplies that include amoxicillin, and weighing scale.

5. Complementarity

The project will complement other nutrition activities that includes community mobilization, promotion, protection and support of infant and young child feeding practices, and capacity building programs. Moreover, the OTP program will be linked with TSFP program. children discharged as cured from OTP will be referred to TSFP. At the same time, children from TSFP can be transfer to OTP or SC when their nutritional status is deteriorated.

LOGICAL FRAMEWORK

Overall project objective

To provide treatment to children with severe acute malnutrition in outpatient therapeutic programme as well as those with medical complications in stabilization centres.

NUTRITION		
Cluster objectives	Strategic Response Plan (SRP) objectives	Percentage of activities
Deliver quality lifesaving management of acute malnutrition for the most vulnerable and at risk.	2017 - SO1: Protect the rights and uphold the dignity of the most vulnerable	100

<u>Contribution to Cluster/Sector Objectives :</u> This project contributes to the cluster objective 1; "Deliver timely quality lifesaving management of acute malnutrition for the most vulnerable and at risk, reaching at least 80% of SAM and 62% of MAM in girls and boys 6-59 months; 53% of PLW and 60% of elderly in need in the POC's". The core pipeline project has the following supplies; RUTF, therapeutic milk (F75 & F100), digital sclaes, and amoxicillin.

Outcome 1

Improved and equitable access to quality lifesaving nutrition treatment services by boys and girls 6-59 months with SAM through provision of therapeutic nutrition supplies.

Output 1.1

Description

Timely procured and prepositioned SAM supplies for all response mechanisms (routine, RRM/ERT and survival kits)

Assumptions & Risks

The security and the road situation will allow for timely delivery of supplies to partners. As a result, there will be no pipeline breakdown. Risks: Insecurity, seasonal issues, inaccessibility due to insecurity.

Indicators

			End	End cycle			
Code	Cluster	Indicator	Men	Women	Boys	Girls	Target
Indicator 1.1.1	NUTRITION	[Core pipeline] Number of cartons of RUTF procured					7,878
Means of Verif	ication : Pipeline reports, par	tner quarterly program reports, RUTF stock-out report	ts				
Indicator 1.1.2	NUTRITION	[Core pipeline] Number of cartons of RUTF distributed to partners					7,878

Means of Verification :

Activities

Activity 1.1.1

Procure lifesaving therapeutic nutrition supplies

Activity 1.1.2

Preposition lifesaving therapeutic nutrition supplies

Activity 1.1.3

Transport, store and distribute the nutrition supplies to implementing partners as per agreements with UNICEF for the treatment of boys and girls 6 to 59 months with SAM

Activity 1.1.4

Monitor the utilization of supplies and report consolidated monthly nutrition supply pipeline updates

Additional Targets :

M & R

Monitoring & Reporting plan

UNICEF in cooperation with implementing partners will monitor the progress and achievements through various ways that includes field monitoring visits, tracking of supplies through the monthly stock status report. Monitoring missions will be conducted post distribution to ensure supplies are safely and properly stored under appropriate conditions, utilized correctly and end user monitoring will also be conducted through visits to OTP sites to ensure supplies have reached the intended beneficiaries. Partners will submit monthly stock-out report using UNICEF supply reporting template to report on supplies received and utilized as well as stock balances and reports will be submitted by the 5th of each month.

As a Pipeline monitoring mechanism, Nutrition cluster in coordination with UNICEF and WFP have established Supply stock out monthly tracking reporting in March 2017. The supply stock-out report captures supply status at facility level. The supply tracking tool has been very vital instrument in improving quality of programs.
