Please discuss the expected long-term outcomes of the project (these should be linked to the outcomes that

were in the original project proposal):

The GBVIMS was created to harmonize data collection on GBV in humanitarian settings, to provide a simple system for actors providing services to GBV survivors to collect, store and analyse their data and to enable the safe and ethical sharing of reported GBV incident data within and between relevant entities. The intention of the GBVIMS is both to assist service providers to better understand the GBV cases being reported as well as to enable actors to share data internally across project sites and externally with agencies for broader trends analysis and improved GBV coordination.
